\section*{APPENDIX B}

\section*{EXPLORATORY TRENCH LOGS}

\section*{APPENDTXB}

Field Exploration

\section*{B-1 General}

Geologic mapping of the site was performed by LGC's personnel. The locations of the exploratory excavations were chosen to obtain site and trench specific subsurface information needed to achieve the objective for this investigation.

A visual survey was conducted to verify that the proposed excavations would not encounter any subsurface utility lines. Underground utilities were not encountered during the field exploratory program.

\section*{B-2 Excavation and Sampling}

Surface geologic mapping of the site and accessible surrounding areas was completed by a geologist from this firm during September 2018, utilizing the referenced Conceptual Grading Plan Tract Map No. 37557 for plotting geologic units. This information is plotted on the enclosed Geotechnical Map (Plate 1).

Ten (10) exploratory trenches, TR-1 through TR-8 and \(\Pi-1\) through \(\Pi-2\), were excavated with a backhoe on September 4, 2018 and September 6, 2018 to depths of approximately 3.0 to 13.5 feet below the existing ground surface. The trenches were excavated to evaluate the general characteristics of the subsurface geologic/geotechnical conditions at the subject site, which consisted of classification of site soil, determination of groundwater elevations (if present), and collection of representative soil and bedrock samples.

Prior to our subsurface work, an underground utilities clearance was obtained from Underground Service Alert of Southern California. At the conclusion of the subsurface investigation, test pits were backfilled with native materials. Minor settlement of the backfill soil may occur over time.

During our subsurface investigation, representative bulk samples were retained for laboratory testing. Laboratory testing was performed on selected representative samples of onsite soil and/or bedrock materials and included maximum dry density and optimum water content, expansion index, sulfate content, chloride content, pH , resistivity, grain size analysis, and direct shear. A discussion of the tests performed and a summary of the results are presented in Appendix C. Moisture and density test results are presented on the trench logs which are presented on the following pages.

\section*{B-3 Miscellaneous}

The trench logs describe the earth materials encountered, sampling method used, and the results of field and laboratory tests. The logs also show the test pit number, date of completion, and the name of the logger. A geologist logged the trenches in accordance with the Standard Practice for Description and Identification of Soils (Visual-Manual Procedure) ASTM D2488-93. The boundaries between soil types shown on the logs are approximate and the transition between different soil layers may be gradual. The logs of the trenches are presented on the following pages.

\section*{APPENDIXC}

\section*{LABORATORY TESTING PROCEDURES AND TEST RESULTS}

\section*{APPENDIX C}

\section*{Laboratory Testing Procedures and Test Results}

The laboratory testing program was directed towards providing quantitative data relating to the relevant engineering properties of the soil. Samples considered representative of site conditions were tested in general accordance with American Society for Testing and Materials (ASTM) procedure and/or California Test Methods (CTM), where applicable. The following summary is a brief outline of the test type and a table summarizing the test results.

Soil Classification: Soil were classified according the Unified Soil Classification System (USCS) in accordance with ASTM Test Methods D2487 and D2488. The soil classifications (or group symbol) are shown on the laboratory test data, and boring logs.

Maximum Dry Density Tests: The maximum dry density and optimum water content of typical materials were determined in accordance with ASTM test method D1557. The test results are presented in the table below:
\begin{tabular}{|c|c|c|c|}
\hline \begin{tabular}{c} 
SAMPLE \\
LOCATION
\end{tabular} & \begin{tabular}{c} 
SAMPLE DESCRIPTION \\
(USCS)
\end{tabular} & \begin{tabular}{c} 
MAXIMUM DRY DENSITY \\
(\% by weight)
\end{tabular} & \begin{tabular}{c} 
OPTIMUM WATER \\
CONTENT (\%)
\end{tabular} \\
\hline\(\Pi-1 @ 0-2^{\prime}\) & Silty SAND/Clayey SILT (SM/ML) & 135.9 & 7.0 \\
\hline TR-4@ \(2-4^{\prime}\) & Bedrock; Quartz Diorite & 133.2 & 7.0 \\
\hline TR-8@ \(4-6^{\prime}\) & Silty SAND/Clayey SILT (SM/ML) & 128.3 & 9.0 \\
\hline
\end{tabular}

Expansion Index: The expansion potential of a selected sample was evaluated by the Expansion Index Test, U.B.C. Standard No. 18-2 and/or ASTM test method D4829. Specimens are molded under a given compactive energy at or near the optimum moisture content and approximately 50 percent saturation or approximately 90 percent relative compaction. The prepared 1 -inch thick by 4 -inch diameter specimens are loaded to an equivalent 144 psf surcharge and are inundated with tap water until volumetric equilibrium is reached. The results of these tests are presented in the table below:
\begin{tabular}{|c|c|c|c|}
\hline \begin{tabular}{c} 
SAMPLE \\
LOCATION
\end{tabular} & \begin{tabular}{c} 
SAMPLE \\
DESCRIPTION(USCS)
\end{tabular} & \begin{tabular}{c} 
EXPANSION \\
INDEX
\end{tabular} & \begin{tabular}{c}

\end{tabular} \\
\hline TR-8@4-6' & Silty SAND/Clayey SILT (SM/ML) & 19 & Very Low \\
\hline
\end{tabular}
*Per ASTM D4829
Soluble Sulfates: The soluble sulfate content of selected samples was determined by standard geotechnical methods (CTM 417). The soluble sulfate content is used to determine the appropriate cement type and maximum water-cement ratios. The test results are presented in the table below:
\begin{tabular}{|c|c|c|c|}
\hline \begin{tabular}{c} 
SAMPLE \\
LOCATION
\end{tabular} & SAMPLE & SULFATE CONTENT & \begin{tabular}{c} 
SULFATE \\
EXPOSUURE
\end{tabular} \\
\hline TR-8@ 4-6' & Silty SAND/Clayey SILT (SM/ML) & Non-Detect & Negligible \\
\hline
\end{tabular}
*Per ACI 318R-05 Table 4.3.1
Chloride Content: Chloride content was tested with CTM 422. The results are presented below:
\begin{tabular}{|c|c|c|}
\hline \hline SAMPLE LOCATION & SAMPLE DESCRIPTION(USCS) & CHLORIDE CONTENT (Ppm) \\
\hline \hline TR-8@ \(4-6^{\prime}\) & Silty SAND/Clayey SILT (SM/ML) & 128 \\
\hline
\end{tabular}

Minimum Resistivily and pH Tests: Minimum resistivity and pH tests were performed with CTM 643. The results are presented in the table below:
\begin{tabular}{|c|c|c|c|}
\hline \hline \begin{tabular}{c} 
SAMPLE \\
LOCATLON
\end{tabular} & \begin{tabular}{c}

DESCRTPTION(USCS)
\end{tabular} & \(p H\) & \begin{tabular}{c} 
MINYMUM RESISTIVITY \\
(ohm-cm)
\end{tabular} \\
\hline TR-8@4-6' & Silty SAND/Clayey SILT (SM/ML) & 7.5 & 1,100 \\
\hline
\end{tabular}

Direct Shear: Direct shear tests were performed on selected remolded samples, which were soaked for a minimum of 24 hours under a surcharge equal to the applied normal force during testing. After transfer of the sample to the shear box, and reloading the sample, pore pressures set up in the sample due to the transfer were allowed to dissipate for a period of approximately 1 hour prior to application of shearing force. The samples were tested under various normal loads, a motor-driven, strain-controlled, direct-shear testing apparatus at a strain rate of less than 0.001 to 0.5 inch per minute (depending upon the soil type). The graphical test results are presented in the table below:
\begin{tabular}{|c|c|c|c||}
\hline SAMPLE LOCATION & SAMPLE DESCRIPTION & \begin{tabular}{c}

\end{tabular} \\
\hline \hline TR-8@4-6' & Silty SAND/Clayey SILT (SM/ML) & 36 & 20 \\
\hline
\end{tabular}

\section*{APPENDIX D}

\section*{GENERAL EARTHWORK AND GRADING SPECIFICATIONS}

\section*{APPENDIX D}

\section*{General Earthwork and Grading Specifications}

\subsection*{1.0 General}
1.1 Intent: These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these more general Specifications. Observations of the earthwork by the project Geotechnical Consultant during the course of grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).
1.2 The Geotechnical Consultant of Record: Prior to commencement of work, the owner shall employ a qualified Geotechnical Consultant of Record (Geotechnical Consultant). The Geotechnical Consultant shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of the grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During the grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of the subgrade and fill materials and perform relative compaction testing of fill to confirm that the attained level of compaction is being accomplished as specified. The Geotechnical Consultant shall provide the test results to the owner and the Contractor on a routine and frequent basis.
1.3 The Earthwork Contractor: The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The Contractor shall be solely responsible for performing the grading in accordance with the project plans and specifications. The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of "equipment" of work and the estimated quantities of daily earthwork contemplated for the site prior to commencement of grading.

The Contractor shall inform the owner and the Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate personnel will be available for observation and testing. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory
conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are rectified. It is the contractor's sole responsibility to provide proper fill compaction.

\section*{2.0}

\section*{Preparation of Areas to be Filled}
2.1 Clearing and Grubbing: Vegetation, such as brush, grass, roots, and other deleterious material shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant.

The Geotechnical Consultant shall evaluate the extent of these removals depending on specific site conditions. Earth fill material shall not contain more than 1 percent of organic materials (by volume). No fill lift shall contain more than 10 percent of organic matter. Nesting of the organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material spedalist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area.

As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, coolant, etc.) have chemical constituents that are considered to be hazardous waste. As such, the indiscriminate dumping or spillage of these fluids onto the ground may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed. The contractor is responsible for all hazardous waste relating to his work. The Geotechnical Consultant does not have expertise in this area. If hazardous waste is a concern, then the Client should acquire the services of a qualified environmental assessor.
2.2 Processing: Existing ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Existing ground that is not satisfactory shall be overexcavated as specified in the following section. Scarification shall continue until soil are broken down and free of oversize material and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction.
2.3 Overexcavation: In addition to removals and overexcavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured or otherwise unsuitable ground shall be overexcavated to competent ground as evaluated by the Geotechnical Consultant during grading.
2.4 Benching: Where fills are to be placed on ground with slopes steeper than 5:1 (horizontal to vertical units), the ground shall be stepped or benched. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise overexcavated to provide a flat subgrade for the fill.
2.5 Evaluation/Acceptance of Fill Areas: All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.
3.1 General: Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soil of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soil to achieve satisfactory fill material.
3.2 Oversize: Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 8 inches, shall not be buried or placed in fill unless location, materials, and placement methods are spedifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or underground construction.
3.3 Zmport: If importing of fill material is required for grading, proposed import material shall meet the requirements of Section 3.1. The potential import source shall be given to the Geotechnical Consultant at least 48 hours ( 2 working days) before importing begins so that its suitability can be determined and appropriate tests performed.

\subsection*{4.0 Fill Placement and Compaction}
4.1 Fill Lavers: Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.
4.2 Fill Moisture Conditioning: Fill soil shall be watered, dried back, blended, and/or mixed, as necessary to attain relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with the American Society of Testing and Materials (ASTM Test Method D1557-91).
4.3 Compaction of Fill: After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557-91). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction with uniformity.
4.4 Compaction of Fill Slopes: In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557-91.
4.5 Compaction Testing: Field tests for moisture content and relative compaction of the fill soil shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).
4.6 Frequency of Compaction Testing: Tests shall be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill soil embankment. In addition, as a
guideline, at least one (1) test shall be taken on slope faces for each 5,000 square feet of slope face and/or each 10 feet of vertical height of slope. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

\subsection*{4.7 Compaction Test Locations:}

The Geotechnical Consultant shall document the approximate elevation and horizontal coordinates of each test location. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so that the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two (2) grade stakes within a horizontal distance of 100 feet and vertically less than 5 feet apart from potential test locations shall be provided.

\subsection*{5.0 Subdrain Installation}

Subdrain systems shall be installed in accordance with the approved geotechnical report(s) and grading plan. The Geotechnical Consultant may recommend additional subdrain and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed by a land surveyor/civil engineer for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys.

\title{
DGS DYNAMIC GEOTECHNICAL SOLUTIONS \\ Geotechnical - Environmental - Materials Testing
}

\section*{Mr. Beau Cooper}

United Engineering Group
8885 Haven Ave, STE 195
Rancho Cucamonga, Califomia 91730

Subject: Global Stability Analysis of Proposed Cut and FIII Slopes, Relative to Proposed Gateway Heights, 108 Cluster Unit Development, City of Moreno Valley, County of Riverside, California.

\subsection*{1.0 Introduction}

Dynamic Geotechnical Solutions, Inc. (DGS) is pleased to submit herewith our slope global stability report for the proposed cut and fill slopes, relative to proposed Gateway Heights, 108 Cluster Unit Development, City of Moreno Valley, County of Riverside, Califomia. This report presents the results of our global stability analyses, conclusions, and recommendations pertaining to the proposed cut and fill slopes within the proposed residential development.

\subsection*{2.0 Background}

There are proposed cut slopes and fills slopes, per the referenced conceptual grading plans by United Engineering Group, which have proposed maximum heights of 32 feet and 39 feet above grade. The most critical cut and fill slopes were evaluated during DGS's global stability analysis.

\subsection*{3.0 Laboratory Analysis}

No additional laboratory testing was conducted for the global stability analysis. Parameters used in evaluating global stability for the subject cut and fill slopes were derived from previous laboratory testing presented in the referenced report by LGC Geo-Environmental (Appendix A).

\subsection*{4.0 Global Stability Analysis}

A global stability analysis was performed for the cut slope above lots \(10-12\) and the fill slope below lots \(4-5\). The slopes were modeled in the depicted location per sheet 2 of the referenced conceptual grading plans. The global stability analysis was performed under static and pseudo-static conditions, as presented in Appendix B.

\subsection*{4.1 Static Condition}

Static conditions that were modeled during the global stability analysis were intended to simulate the day-to-day functionality of the proposed graded slopes. These conditions do not incorporate earthquake loading into the analysis. Previous shear strength and cohesion values obtained from the referenced reports (Appendix A) were used in the global stability analysis.

\subsection*{4.2 Pseudo-Static Condition}

Pseudo-static conditions attempt to model the proposed graded slopes when earthquake loads are imposed on the slope face. All pseudo-static conditions were modeled with an earthquake acceleration coefficient of 0.15 g . Previous shear strength and apparent cohesion values were used in the global stability analysis.

\subsection*{5.0 Results and Conclusions}

Based on our slope global stability analyses, the proposed orientations, per the referenced conceptual grading plans, for proposed cut and fill slopes produce a minimum required factor of safety of 1.5 under static conditions, and a 1.15 factor of safety under pseudo-static (earthquake loading) conditions. Therefore, the proposed graded slopes are considered to be stable from a geotechnical engineering standpoint, provided the recommendations presented herein and the referenced geotechnical report are implemented.

\subsection*{6.0 Recommendations}

All engineered graded slopes should be landscaped to prevent erosion over time of the slope face. During rough grading and composite wall installation, a geologist from LGC should be onsite to ensure that any adverse slope conditions do not arise, inspect fill slope keys, and to give in-field recommendations, as necessary. Additionally, all recommendations per the referenced conceptual grading plans and referenced report should be adhered to.

DGS should review any changes in the design prior to implementation to determine if future construction will conform to these report recommendations and the previous recommendations in the referenced geotechnical report.

\subsection*{7.0 Limitations}

Our services were performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable engineers and geologists practicing in this or similar localities. No other warranty, expressed or implied, is made as to the conclusions and professional advice included in this report. The findings of this report are valid as of the present date. However, changes in the conditions of a property can and do occur with the passage of time, whether they be due to natural processes or the works of man, on this or adjacent properties.

\section*{Closure}

If you have any questions regarding the content of this report, please do not hesitate to contact this office at your earliest convenience.

Sincerely,

Distribution: (4) Addressee

\section*{APPENDIX B}

\section*{GLOBAL STABILITY ANAL YSIS AND RESULTS}

\subsection*{1.0 Approach}

After a review of the referenced plans and reports, the two proposed segmental walls, labeled as Wall C and Wall E , were evaluated for the global stability analysis. The global stability analysis was conducted using the geotechnical program GSTABL7 with STEDwin (Version 2.002). The Modified Bishop's Method was used to analyze rotational failure modes. The slope face, segmental walls, and any the conditions above the segmental walls were modeled in GSTABL7 as per the referenced plans. Two separate conditions were modeled and evaluated in GSTABL7; a static condition in which there are no earthquake loads applied, and a pseudo-static condition, in which earthquake loads are applied to the model. A coefficient of horizontal acceleration of 0.15 g was used for the pseudo-static stability analysis. Additionally, all the conditions were evaluated without the proposed wall grids in place. If the proposed design meets or exceeds the minimum factors of safety (F.S.) without the grids modeled, then the design F.S. will be much greater.

\hline
\end{tabular}

\subsection*{3.0 Presentation of Analysis and Conclusions}

A visual and textual summary of the slope stability analysis of LGC's proposed design, for both the static and pseudo-static conditions, are presented in the following pages. In conclusion, the proposed graded slopes is considered stable from a geotechnical engineering standpoint. Special care must be taken to ensure all drainage requirements are met and that erosion over time of the slope face does not occur.

A Critical Failure Surface Searching Method, Using A Random
Technique For Generating Circular Surfaces, Has Been Specified.
1000 Trial Surfaces Have Been Generated.
20 Surface(s) Initiate(s) From Each of 50 Points Equally Spaced
Along The Ground Surface Between \(X=0.00(f t)\)
and \(X=80.00(\mathrm{ft})\)
Each Surface Terminates Between \(X=140.00(\mathrm{ft})\)
and \(X=340.00(f t)\)
Unless Further Limitations Were Imposed, The Minimum Elevation
At Which A Surface Extends Is \(Y=1560.00\) ( It )
\(20.00(\mathrm{ft})\) Line Sogments Define Each Trial Failure Surface.
Following Are Displayed The Ten Nost Critical of The Trial
Failure Surfaces Evaluated. They Are
Ordered - Most Critical First.
* * Safety Factors Are Calculated By The Nodified Bishop Method * *

Total Number of Trial Surfaces Evaluated - 1000
Statistical Data on All Valid FS Values:
ES Max - 14.716 FS Min - 1.728 ES Ave - 5.601 Standard Deviation = 2.335 Coefficient of Variation - 41.69 \%

\section*{EXECUTIVE SUMMARY}

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

\section*{SURROUNDING SITES: SEARCH RESULTS}

Surrounding sites were identified in the following databases.
Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.
Unmappable (orphan) sites are not considered in the foregoing analysis.

\section*{STANDARD ENVIRONMENTAL RECORDS}

\section*{State- and tribal - equivalent CERCLIS}

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/25/2021 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

\section*{EXECUTIVE SUMMARY}

\section*{ADDITIONAL ENVIRONMENTAL RECORDS}

\section*{Other Ascertainable Records}

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 02/11/2021 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

\section*{STANDARD ENVIRONMENTAL RECORDS}

\section*{Federal NPL site list}

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

\section*{Federal Delisted NPL site list}

Delisted NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2021

SEMS: Superfund Enterprise Management System
SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

\section*{Federal CERCLIS NFRAP site list}

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

\section*{Federal RCRA non-CORRACTS TSD facilities list}

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.
Date of Government Version: 03/22/2021

\section*{ENVIROSTOR: EnviroStor Database}

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

\section*{ADDITIONAL ENVIRONMENTAL RECORDS}

\section*{Local Brownfield lists}

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

\section*{DEED: Deed Restriction Listing}

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions \& Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically \(700,000-1,000,000\) annually, representing approximately 350,000-500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

\section*{EDR HIGH RISK HISTORICAL RECORDS}

\section*{EDR Exclusive Records}

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

\section*{OTHER DATABASE(S)}

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.
Medical Centers: Provider of Services Listing
Source: Centers for Medicare \& Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare \& Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.
Nursing Homes

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:
1. Groundwater flow direction, and

\section*{GEOCHECK \({ }^{\circledR}\) - PHYSICAL SETTING SOURCE SUMMARY}

\section*{GROUNDWATER FLOW DIRECTION INFORMATION}

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

\section*{TOPOGRAPHIC INFORMATION}

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY
General Topographic Gradient: General SSW

\section*{SURROUNDING TOPOGRAPHY: ELEVATION PROFILES}

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

\section*{GEOCHECK \({ }^{\circledR}\) - PHYSICAL SETTING SOURCE SUMMARY}

\section*{HYDROLOGIC INFORMATION}

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

\end{tabular}

\section*{NATIONAL WETLAND INVENTORY}

NWI Quad at Target Property
NWI Electronic
Data Coverage
YES - refer to the Overview Map and Detail Map

\section*{HYDROGEOLOGIC INFORMATION}

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.
\begin{tabular}{lr}

\end{tabular}

\section*{AQUIFLOW \({ }^{\circledR}\)}

Search Radius: 1.000 Mile.
EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

}

\section*{GEOCHECK \({ }^{\circledR}\) - PHYSICAL SETTING SOURCE SUMMARY}

\section*{GROUNDWATER FLOW VELOCITY INFORMATION}

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

\section*{GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY}

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

\section*{HYDROGEOLOGIC INFORMATION}

AQUIFLOW \({ }^{R}\) Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

\section*{GEOLOGIC INFORMATION}

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

\section*{1 INTRODUCTION}

\subsection*{1.1. SITE DESCRIPTION}

\subsection*{1.1.1. LOCATION}

Gateway Heights is located 220 feet north of Jennings Court and east of Morton Road in the City of Moreno Valley, Riverside County. It is parcel 256-150-001.

\subsection*{1.1.2. EXISTING FEATURES}

The property contains 32.8 acres in the foothill of the Box Springs Mountain Reserve Park. The project proposes to develop approx. 15.43 acres of 32.8 into 108 detached condominium units with the dwelling units in an 8-unit "cluster" concept. The site drains northeast to southwest with steep slopes, especially in the hillside areas. It is bordered on three sides with vacant land, and of the south by existing single-family residences.

\subsection*{1.1.3. PROPOSED CONDITION}

It is proposed that the subject property be developed to permit development of residential lots per the request of the client. The site will contain 108 single family lots via Planned Unit Development. Access to the site will be from Morton Road. There will be open space area placed near the entrance at the base of the hill to provide flood and water quality mitigation.

\subsection*{1.2. PURPOSE OF REPORT}

The purpose of this report is to review the West End Moreno Master Drainage Plan (adopted 1991) and ensure design compatibility with the proposed project. This report will analyze the hydrology of the landscape and assess the hydraulic conditions of the subject parcel to verify consistency with the previously listed reports. Where necessary, control measures will be recommended to alleviate existing flood problems and provide for water quality concerns using the County of Riverside Flood Control processes.

\subsection*{1.3. FEMA INFORMATION}

The Flood Insurance Rate Maps (Panel 06065C0733G) for this subject property shows that the site falls within Zone X. Zone X denotes areas determined to be "Areas of Undermined Flood Hazard".

\section*{2. EXISTING DRAINAGE PATTERNS}

\subsection*{2.1. OFFSITE}

The West End Moreno Master Drainage Plan studied the drainage patterns for this overall area and identified Line A and Line B along the northwestern and southwestern edges of the property. Line \(A\) is to the north of the proposed development and thus no improvements are proposed. Line \(B\) is located offsite to the south and west of the property. The project area is within the contributory area of Line B. Flows that originate in the hillside areas drain southwesterly and some defined watercourses have formed. A portion of the site drains southwesterly to Line B, and the other portion drains westerly along another main flow path along the north side of Morton Road. This report analyzed three main watercourses affecting the development limits. Two of the watercourses continue southwesterly, join each other at point 305 , and then intersect with the large wash that runs along the southwest edge of the property at point 306. Points 304 and 403 have been determined at 90.6 cfs and 26.7 cfs respectively. Another smaller area impacts the northeastern edge of the development area and is contributory to Line A. Point 502 has been determined at 7.8 cfs . Refer to the Existing Conditions Exhibit. In addition to the the main washes that impact the eastern edge of the site and continue through the site, there are four concentrations of flow that originate onsite and discharge along the western property line. Those too are analyzed. Points 602, 702, 802, and 902 have been determined at \(5.8 \mathrm{cfs}, 1.8 \mathrm{cfs}, 5.7 \mathrm{cfs}\), and 8.0 cfs respectively. Refer to the Existing Conditions Exhibit.

\subsection*{2.2. ONSITE}

The site has been disturbed and graded in recent history (mostly for fire mitigation). There are existing concentrations of storm runoff traversing the site. There are defined jurisdictional watercourses along the southwestern edge of the property that has historically conveyed storm runoff along the back of the existing homes, and then across Morton Road. There are a few minor non jurisdictional concentrations of flow at the base of the hills that originate on site from the hillside. Using the proposed development limits, this report analyzed the 1,3,6, and 24hr, 2,5,10, and 100 year runoff events (per the RCFCWCD method). Refer to the Onsite Existing Conditions Exhibit

\section*{3. PROPOSED DRAINAGE PATTERNS}

\subsection*{3.1. OFFSITE}

For the offsite, hillside runoff, the project is proposing three storm drain collection points. Point 502 is along the northern edge, is 7.8 cfs , and will be carried by a 24 " pipe through the project, continuing westerly along the
existing flow path. The other two, points 403, and 304, are 26.7 cfs, and 90.6 cfs, respectively. 403 will be carried by a proposed 24 " pipe and connected to a proposed 36" pipe that carries the flow from point 304. That proposed storm drain system also connects to the historic flow path. Preliminary pipe capacity calculations are located in Appendix B. At time of final design additional design including HGL will be required.
The project is adjacent to the proposed MDP Line B crossing, which is just south of the projects entrance, but is offsite. The project has been designed to route the hillside flows through the project via a proposed 36 " pipe, then outlet to the Line \(B\) system. The project proposes to build the Line B Crossing. Two (2) 3' \(\times 6^{\prime}\) RCB culverts will be built under Morton Road. From there flows will outlet within an existing channel that carries the regional flows and mimicking the existing conditions just south of the project.

\subsection*{3.2. ONSITE}

The Gateway Heights project will provide developed roads, combination bio retention and detention basins of sufficient size to accept, clean, mitigate the increase, and route the runoff from the proposed site. Basins for Gateway Heights have been designed to detain the difference in runoff hydrograph volume between the "developed" condition and the "predeveloped" condition using basin routing calculations. Runoff will be routed to bio-retention basins throughout the project via storm drain inlets. The water quality basins will drain via underdrains into a storm drain system and eventually into the proposed Line B System. Outlet design to be provided with final routing calculations to match existing conditions. It is anticipated that existing conditions can be matched.

\section*{4. HYDROLOGIC CONDITIONS}

The Synthetic Unit Hydrograph and Rational Methods have been employed to determine peak runoff amounts and volumes. The Riverside County Flood Control and Water Conservation District (RCFCD \& WCD) Hydrology Manual (reference 1) was used to develop the hydrological parameters for the 1, 3, 6 , and \(24 \mathrm{hr}, 2,5,10\), and 100 year storm events. Refer to appendix A for detail.

\subsection*{4.1. OFFSITE}

The offsite runoff potential has been analyzed with the Rational Method per the Riverside County Flood Control and Water Conservation District (RCFCD \& WCD) Hydrology Manual (reference 1).

The Following Data is the result of the calculations;
\begin{tabular}{|c|c|c|c|}

\end{tabular}

\section*{4．2．ONSITE}

In the existing condition，the proposed development envelope is varying terrain with steeper areas．It is proposed to be developed into single family cluster lots．The onsite runoff potential has been analyzed with the Synthetic Unit Hydrograph Method per the Riverside County Flood Control and Water Conservation District（RCFCD \＆WCD）Hydrology Manual （reference 1）．
The Following Data is used in the calculations；
Soils Group－C
Pre－development Runoff Index－ 84 with 0\％impervious
Post－development Runoff Index－ 69 with \(65 \%\) impervious
Rainfall Data－Winchester Slope \(=0.52\)
2 yr － \(1 \mathrm{hr}=0.466\)＂
\(100 \mathrm{yr}-1 \mathrm{hr}=1.19\)＂
2 yr － \(3 \mathrm{hr}=0.799\)＂
100 yr －3hr＝1．89＂
2 yr － \(6 \mathrm{hr}=1.09\)＂
100 yr － \(6 \mathrm{hr}=2.55^{\prime \prime}\)
\(2 \mathrm{yr}-24 \mathrm{hr}=1.93\)＂
\(100 \mathrm{yr}-24 \mathrm{hr}=4.64\)＂
Per RCFCWCD method，the results of the hydrograph analysis are in the below tables．
basin routing is provided to show the proposed condition can be mitigated to less than the existing condition．The following tables summarize that volume calculations．
\begin{tabular}{|c|c|c|c|c|c|c|c|c|}
\hline \multicolumn{9}{|l|}{Moreno Valley 33 - Area A Pre-Development} \\
\hline & \multicolumn{8}{|c|}{Storm Duration} \\

\hline
\end{tabular}

As seen in the above calculations, Area A post development runoff is less than the pre-development runoff. This is expected due to the reduced area in the post development area. The balance of the area is routed into Area B. Area B will still need to mitigate the developed condition of \(B\), plus the areas of \(A\) and \(C\) that are routed to the basin in the proposed condition, to less than the existing runoff from Area B. While Basin A does not require flood runoff mitigation it is still needed for water quality. Basin stage storage discharge details are in the below tables;
\begin{tabular}{|c|c|c|c|c|c|}
\hline \multicolumn{6}{|l|}{Basin Stage-Storage-Outfall Chart} \\
\hline & \begin{tabular}{l}

\section*{5. HYDRAULIC CONDITIONS}

\subsection*{5.1. Existing Conditions}

There are 8 primary washes that were analyzed for hydraulic conditions in the existing condition. They are identified in the existing conditions maps at concentration points \(104,304,403,502,602,702,802\), and 902 . These are mountain/foothill washes with steep slopes. The velocities are \(15 \mathrm{ft} / \mathrm{s}\), \(12 \mathrm{ft} / \mathrm{s}, 8 \mathrm{ft} / \mathrm{s}, 11 \mathrm{ft} / \mathrm{s}, 7 \mathrm{ft} / \mathrm{s}, 5 \mathrm{ft} / \mathrm{s}, 6 \mathrm{ft} / \mathrm{s}\), and \(6 \mathrm{ft} / \mathrm{s}\) respectively.

\subsection*{5.2. Proposed Conditions}

The proposed condition for this site will be to construct a network of public roads within the site to convey storm runoff into the bioretention/water quality basins. The two Bio-retention basins (Basins A and B) are planned in the southwest corner of the site to clean and discharge the flood water. Basin \(B\) is north of the main entrance, and Bains \(A\) is within the enlarged median of the main entrance. These structures will be designed per Riverside County LID - Bioretention standards in more detail at time of final design. Refer to the Proposed Conditions Exhibit for a sample section. The flows will be discharged offsite via underdrains and overflow grates connected to stormdrain pipes and outlets designed aligned with existing washes. The eastern offsite concentrations identified in section 4.1 and 5.1 and on the existing conditions offsite exhibit, points 304,403 , and 502 , will be carried through the project by storm drain and discharged at or near historic flow paths. They are preliminarily sized as shown on Figure 2, with preliminary sizing in Appendix B. Point 503 will be diverted from its existing flow path slightly north within the same wash. This is a small diversion of flow. The discharge points at 602, 702, and 802 will be eliminated and all onsite drainage within area \(B\) will be routed through Basin B and outleted at point 902. This concentration of flow will require adjacent property owner approval. All of these concentration points join in the same stream within that owner's site, and it is preferable to have them controlled via one outlet and channel system. It is assumed the project will be required to build its half width along the limited frontage of Morton Road along with any required tapers. Control of drainage along the project's frontage is difficult. First, the project is well above grade from the road, eliminating any possibility to route road runoff northeasterly into the project. Second, there is a high point in Morton Road very near the project entrance, and thus the very minor road runoff ( 0.3 acre area total, <1cfs) will be routed northwesterly and southeasterly along the road as it is currently carried. Analysis and Design of drainage control facilities for this area will be provided at final design in conjunction with Morton Road design plans. The runoff carried by Morton Road will be reduced by the construction of the Project and the Line B System.

\subsection*{5.3. Roads}

Interior roads will consist of pavement thickness in conformance with the Geotechnical Report, when available, and per County of Riverside
Standards. Roads will have 36 foot widths measured curb face to curb face per County of Riverside Standards. Streets will be designed to pass the 10year storm water within the curb, with the 100 -year flows contained within the right-of-way. All interior roads will have cross slopes of two (2)
percent. With the high slopes due to the hillside on the proposed map, the 10 yr peak runoff calculated for the \(2.08 \%\) minimum slope can carry 76 cfs in the street. That exceeds the expected 100 year peak runoff for the onsite flows (28cfs). At final design storm drain may be placed to keep the intersections dry. Storm drain is also required for outlet from the bioretention basins. Minimum size for these lines is 24 " per City of Moreno Valley Standards, all lines are to be 24" unless otherwise noted. At time of final design, detailed storm drain calculations and sizing will be required. It is not anticipated that any onsite storm drain will require RCFCD maintenance, and thus will be reviewed by Moreno Valley.
Morton Road will be widened along the project entrance. Additionally, Line \(B\) will be constructed under Morton Road per the MDP just south of the project. This addition of Line B will remove a significant amount of existing runoff that enters Morton Road from the hillside ( 334 cfs ). That existing runoff that floods Morton Road and Jennings Court intersection will be routed by Line B to the west side of Morton and discharged to an existing natural channel.

\section*{6. WATER QUALITY}

All of the onsite water quality runoff volume is proposed to be collected within the proposed drainage system and treatment will be handled via combination bio-retention and flood storage basins at the southwestern edge. Detailed design of the basins, outlet structures, and any filter media will be prepared at final design but must treat the volume indicated in the Project Preliminary WQMP. Preliminary sizing and design for the basins is contained in Appendix C and as shown on the Proposed Conditions Exhibit Basin Detial. Final design of the basins, complete with landscaping and pipe plans will be provided with final construction plans and landscape plans.

\section*{7. MAINTENANCE}

It is proposed that all of the onsite features including internal project open space, basins, and storm drainpipes will be maintained by the property owner association.
Determination of the Line B facility's maintenance responsibility will be determined during the final design process.

\footnotetext{
\({ }^{1}\) Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS)
Numbers in parenthesis are PF estimates at lower and upper bounds of the \(90 \%\) confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is \(5 \%\). Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.
Please refer to NOAA Atlas 14 document for more information.

\hline
\end{tabular}

Notes:
1. Land use should be based on ultimate development of the watershed. Long range master plans for the county and incorporated cities should be reviewed to insure reasonable land use assumptions.
2. Recommended values are based on average conditions which may not apply to a particular study area. The percentage impervious may vary greatly even on comparable sized lots due to differences in dwelling size, improvements, etc. Landscape practices should also be considered as it is common in some areas to use ornamental gravels underlain by impervious plastic materials in place of lawns and shrubs. A field investigation of a study area should always be made, and a review of aerial photos, where available may assist in estimating the percentage of impervious cover in developed areas.
3. For typical horse ranch subdivisions increase impervious area 5 percent over the values recommended in the table above.

```

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value

| Unit | Time | Pattern | Storm Rain | Loss rate(In./Hr) |  | Effective |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value

| Unit | Time(Hr.) | Pattern Percent | Storm Rain(In/Hr) | Loss rate(In./Hr) |  | Effective (In/Hr) |

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value

Unit Time Pattern Storm Rain Loss rate(In./Hr) Effective

|  | ( Hr.$)$ | Percent | ( $\mathrm{In} / \mathrm{Hr}$ ) | Max | Low | ( $\mathrm{In} / \mathrm{Hr}$ ) |

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value

Unit Time Pattern Storm Rain Loss rate(In./Hr) Effective

|  | ( Hr.$)$ | Percent | ( $\mathrm{In} / \mathrm{Hr}$ ) | Max | Low | ( $\mathrm{In} / \mathrm{Hr}$ ) |

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value

Unit Time Pattern Storm Rain Loss rate(In./Hr) Effective

|  | ( Hr.$)$ | Percent | ( $\mathrm{In} / \mathrm{Hr}$ ) | Max | Low | ( $\mathrm{In} / \mathrm{Hr}$ ) |

```

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value

| Unit | Time | Pattern | Storm Rain | Loss rate(In./Hr) |  | Effective |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | ( Hr.$)$ | Percent | (In/Hr) | Max | Low | ( $\mathrm{In} / \mathrm{Hr}$ ) |

    Area(Ac.)[1] Rainfall(In)[2] Weighting[1*2]
```

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value

| Unit | Time | Pattern | Storm Rain | Loss rate(In./Hr) |  | Effective(In/Hr) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | ( Hr.$)$ | Percent | ( In/Hr) | Max | Low |  |

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value

| Unit |  | Pattern | Storm Rain | Loss rate(In./Hr) |  | Effective |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | ( Hr.$)$ | Percent | (In/Hr) | Max | Low | (In/Hr) |

Mi.
    Difference in elevation = 52.00(Ft.)
    Slope along watercourse = 198.9565 Ft./Mi.
    Average Manning's 'N' = 0.015
    Lag time = 0.039 Hr.
    Lag time = 2.35 Min.
    25% of lag time = 0.59 Min.
    40% of lag time = 0.94 Min.
    Unit time = 5.00 Min.
    Duration of storm = 24 Hour(s)
    User Entered Base Flow = 0.00(CFS)

    Area(Ac.)[1] Rainfall(In)[2] Weighting[1*2]
```

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value

| Unit | Time | Pattern | Storm Rain |
| :---: | :---: | :---: | :---: |

    **** RETARDING BASIN ROUTING ****
```

User entry of depth-outflow-storage data

-     - Total number of inflow hydrograph intervals $=290$
Hydrograph time unit $=5.000$ (Min.)
Initial depth in storage basin $=0.00(F t$.

```
Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)
```

    **** RETARDING BASIN ROUTING ****
```

User entry of depth-outflow-storage data

-     - Total number of inflow hydrograph intervals $=38$
Hydrograph time unit $=5.000$ (Min.)
Initial depth in storage basin $=0.00(F t$.

```
Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
```

Initial basin outflow $=0.00$ (CFS)

    **** RETARDING BASIN ROUTING ****
```

User entry of depth-outflow-storage data

-     - Total number of inflow hydrograph intervals $=290$
Hydrograph time unit $=5.000$ (Min.)
Initial depth in storage basin $=0.00(F t$.

```
Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)
```

Project Specific Water Quality Management Plan

## Project Specific Water Quality Management Plan

A Template for Projects located within the Santa Ana Watershed Region of Riverside County

Project Title: Gateway Heights

Development No: PEN21-0066
Design Review/Case No: LWQ21-0014

Prepared for: HengHou Group
Shizao Zheng
1378 West Zhongshan Rd

PreliminaryFinal

Original Date Prepared: March 8, 2021

Revision Date(s): Nov 24, 2021; March 23, 2022;
Oct 24, 2022; Nov 10, 2022

Prepared for Compliance with
Regional Board Order No. R8-2010-0033

Prepared by: Christopher Lenz, P.E., Principal
United Engineering Group CA, Inc. 8885 Haven Avenue, Suite 195
Rancho Cucamonga, CA 91730
(909) 466-9240

## A Brief Introduction

This Project-Specific WQMP Template for the Santa Ana Region has been prepared to help guide you in documenting compliance for your project. Because this document has been designed to specifically document compliance, you will need to utilize the WQMP Guidance Document as your "how-to" manual to help guide you through this process. Both the Template and Guidance Document go hand-in-hand, and will help facilitate a well prepared Project-Specific WQMP. Below is a flowchart for the layout of this Template that will provide the steps required to document compliance.

## OWNER＇S CERTIFICATION

This Project－Specific Water Quality Management Plan（WQMP）has been prepared for HengHou Group by United Engineering Group CA，Inc．for the Gateway Heights project，PEN21－0066．

This WQMP is intended to comply with the requirements of City of Moreno Valley Ordinance 827 which includes the requirement for the preparation and implementation of a Project－Specific WQMP．

The undersigned，while owning the property／project described in the preceding paragraph，shall be responsible for the implementation and funding of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up－to－date conditions on the site．In addition，the property owner accepts responsibility for interim operation and maintenance of Stormwater BMPs until such time as this responsibility is formally transferred to a subsequent owner．This WQMP will be reviewed with the facility operator，facility supervisors，employees，tenants，maintenance and service contractors，or any other party（or parties）having responsibility for implementing portions of this WQMP．At least one copy of this WQMP will be maintained at the project site or project office in perpetuity．The undersigned is authorized to certify and to approve implementation of this WQMP．The undersigned is aware that implementation of this WQMP is enforceable under the City of Moreno Valley Water Quality Ordinance（Municipal Code 8．10）
＂I，the undersigned，certify under penalty of law that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest．＂

## Section A: Project and Site Information

## A. 1 Maps and Site Plans

When completing your Project-Specific WQMP, include a map of the local vicinity and existing site. In addition, include all grading, drainage, landscape/plant palette and other pertinent construction plans in Appendix 2. At a minimum, your WQMP Site Plan should include the following:

- Drainage Management Areas
- Proposed Structural BMPs
- Source Control BMPs
- Buildings, Roof Lines, Downspouts
- Drainage Path
- Impervious Surfaces
- Drainage Infrastructure, Inlets, Overflows
- Standard Labeling

Use your discretion on whether or not you may need to create multiple sheets or can appropriately accommodate these features on one or two sheets. Keep in mind that the Co-Permittee plan reviewer must be able to easily analyze your project utilizing this template and its associated site plans and maps.

## A. 2 Identify Receiving Waters

Using Table A. 1 below, list in order of upstream to downstream, the receiving waters that the project site is tributary to. Continue to fill each row with the Receiving Water's 303(d) listed impairments (if any), designated beneficial uses, and proximity, if any, to a RARE beneficial use. Include a map of the receiving waters in Appendix 1.

Table A. 1 Identification of Receiving Waters
\(\left.$$
\begin{array}{|l|l|l|l|l|}\hline \text { Receiving Waters } & \begin{array}{l}\text { EPA Approved } \\
\text { Impairments }\end{array} & \begin{array}{l}\text { List }\end{array} & \begin{array}{l}\text { Proximity } \\
\text { RARE } \\
\text { Beneficial Uses }\end{array}
$$ <br>

Beneficial Use\end{array}\right]\)| None |
| :--- |
| Box Springs Canyon |
| Noqe |

## A. 3 Additional Permits/Approvals required for the Project:

Table A. 2 Other Applicable Permits

| Agency | Permit Required |  |
| :--- | :--- | :--- |
| State Department of Fish and Game, 1602 Streambed Alteration Agreement | $\boxed{Y}$ | $\square \mathrm{~N}$ |
| State Water Resources Control Board, Clean Water Act (CWA) Section 401 Water Quality Cert. | $\boxed{\mathrm{Y}}$ | $\square \mathrm{N}$ |
| US Army Corps of Engineers, CWA Section 404 Permit | $\boxed{\mathrm{Y}}$ | $\square \mathrm{N}$ |
| US Fish and Wildlife, Endangered Species Act Section 7 Biological Opinion | $\square \mathrm{Y}$ | $\boxed{\mathrm{N}}$ |
| Statewide Construction General Permit Coverage | $\boxed{\mathrm{Y}}$ | $\square \mathrm{N}$ |
| Statewide Industrial General Permit Coverage | $\square \mathrm{Y}$ | $\boxed{\mathrm{N}}$ |
| Western Riverside MSHCP Consistency Approval (e.g., JPR, DBESP) | $\boxed{\mathrm{Y}}$ | $\square \mathrm{N}$ |
| Other (please list in the space below as required) <br> City of Moreno Valley Grading Permit | $\boxed{\mathrm{Y}}$ | $\square \mathrm{N}$ |

If yes is answered to any of the questions above, the Co-Permittee may require proof of approval/coverage from those agencies as applicable including documentation of any associated requirements that may affect this Project-Specific WQMP.

## Section B: Optimize Site Utilization (LID Principles)

Review of the information collected in Section ' $A$ ' will aid in identifying the principal constraints on site design and selection of LID BMPs as well as opportunities to reduce imperviousness and incorporate LID Principles into the site and landscape design. For example, constraints might include impermeable soils, high groundwater, groundwater pollution or contaminated soils, steep slopes, geotechnical instability, high-intensity land use, heavy pedestrian or vehicular traffic, utility locations or safety concerns. Opportunities might include existing natural areas, low areas, oddly configured or otherwise unbuildable parcels, easements and landscape amenities including open space and buffers (which can double as locations for bioretention BMPs), and differences in elevation (which can provide hydraulic head). Prepare a brief narrative for each of the site optimization strategies described below. This narrative will help you as you proceed with your LID design and explain your design decisions to others.

The 2010 Santa Ana MS4 Permit further requires that LID Retention BMPs (Infiltration Only or Harvest and Use) be used unless it can be shown that those BMPs are infeasible. Therefore, it is important that your narrative identify and justify if there are any constraints that would prevent the use of those categories of LID BMPs. Similarly, you should also note opportunities that exist which will be utilized during project design. Upon completion of identifying Constraints and Opportunities, include these on your WQMP Site plan in Appendix 1.

## Site Optimization

The following questions are based upon Section 3.2 of the WQMP Guidance Document. Review of the WQMP Guidance Document will help you determine how best to optimize your site and subsequently identify opportunities and/or constraints, and document compliance.

Did you identify and preserve existing drainage patterns? If so, how? If not, why?
Yes. Existing drainage patterns are preserved at the northern edge of the site, and along the southern edge of the site, through avoidance by the development limits, and dedication of a 50' drainage easement along the southern wash.

Did you identify and protect existing vegetation? If so, how? If not, why?
Yes, the 50' setback and avoidance of the wash will preserve existing vegetation.
Did you identify and preserve natural infiltration capacity? If so, how? If not, why?
$n / a$. The site has limited to no infiltration potential.
Did you identify and minimize impervious area? If so, how? If not, why?
Yes. Impervious areas have been minimized by utilizing narrow streets, providing natural open space, developed open space, trails, recreational areas and park areas.

Did you identify and disperse runoff to adjacent pervious areas? If so, how? If not, why?
Yes, bio retention basins have been incorporated into the design of the project.

## Section C: Delineate Drainage Management Areas (DMAs)

Utilizing the procedure in Section 3.3 of the WQMP Guidance Document which discusses the methods of delineating and mapping your project site into individual DMAs, complete Table C. 1 below to appropriately categorize the types of classification (e.g., Type A, Type B, etc.) per DMA for your project site. Upon completion of this table, this information will then be used to populate and tabulate the corresponding tables for their respective DMA classifications.

Table C. 1 DMA Classifications

| DMA Name or ID | Surface Type(s) ${ }^{1}$ | Area (acres) | DMA Type |
| :--- | :--- | :--- | :--- |
| DMA A | Townhomes, roads, slopes | 4.0 | Type D |
| DMA B | Townhomes, roads, slopes | 10.9 | Type D |
| DMA C | Road | 0.3 | No Treatment Possible |
| DMA D | Hillside | 4.5 | Type A |
| DMA E | Hillside | 12.7 | Type A |
| DMA F | Hillside | 0.6 | Type A |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

${ }^{1}$ Reference Table 2-1 in the WQMP Guidance Document to populate this column

Table C. 2 Type 'A', Self-Treating Areas

| DMA Name or ID | Area (Sq. Ft.) | Stabilization Type | Irrigation Type (if any) |
| :--- | :--- | :--- | :--- |
| DMA D | 194131 | none | none |
| DMA E | 554069 | none | none |
| DMA F | 25195 | Landscaping | Irrigated (Design at Final) |
|  |  |  |  |

Table C. 3 Type 'B', Self-Retaining Areas

Table C. 4 Type 'C', Areas that Drain to Self-Retaining Areas

Table C. 5 Type 'D', Areas Draining to BMPs

| DMA Name or ID | BMP Name or ID |
| :--- | :--- |
| DMA A | BMP A |
| DMA B | BMP B |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

Note: More than one drainage management area can drain to a single LID BMP, however, one drainage management area may not drain to more than one BMP.

DMA C - A portion of the main entrance to the site (Street A) and Morton Road is not able to be treated. The grades and conditions of the road in this area do not allow for the collection and treatment of the runoff, as the site sits well above grade from Morton Road. Also, the project is at a highpoint in Morton Rd so any acceptance and routing of street flow should be further downstream along Morton Road. The areas around Morton Road, including any future right of way, is also unable to provide for treatment as the grades in the area fall off significantly to the southwest. Runoff from this area will continue in the existing condition, by flowing into the natural channel southwest of the road.

At 0.3 acres, DMA C represents a negligible percentage of the impervious area at less than $5 \%$.

## Section D: Implement LID BMPs

## D. 1 Infiltration Applicability

Is there an approved downstream 'Highest and Best Use' for stormwater runoff (see discussion in Chapter 2.4.4 of the WQMP Guidance Document for further details)? $\quad \square \mathrm{Y} \quad \boxtimes \mathrm{N}$

If yes has been checked, Infiltration BMPs shall not be used for the site. If no, continue working through this section to implement your LID BMPs. It is recommended that you contact your Co-Permittee to verify whether or not your project discharges to an approved downstream 'Highest and Best Use' feature.

## Geotechnical Report

A Geotechnical Report or Phase I Environmental Site Assessment may be required by the Copermittee to confirm present and past site characteristics that may affect the use of Infiltration BMPs. In addition, the Co-Permittee, at their discretion, may not require a geotechnical report for small projects as described in Chapter 2 of the WQMP Guidance Document. If a geotechnical report has been prepared, include it in Appendix 3. In addition, if a Phase I Environmental Site Assessment has been prepared, include it in Appendix 4.

Is this project classified as a small project consistent with the requirements of Chapter 2 of the WQMP Guidance Document? $\square \mathrm{Y} \quad$ 【 N

## Infiltration Feasibility

Table D. 1 below is meant to provide a simple means of assessing which DMAs on your site support Infiltration BMPs and is discussed in the WQMP Guidance Document in Chapter 2.4.5. Check the appropriate box for each question and then list affected DMAs as applicable. If additional space is needed, add a row below the corresponding answer.

Table D. 1 Infiltration Feasibility

| Does the project site... | YES | NO |
| :--- | :--- | :--- |
| ...have any DMAs with a seasonal high groundwater mark shallower than 10 feet? |  | x |
| If Yes, list affected DMAs: |  |  |
| ...have any DMAs located within 100 feet of a water supply well? | x |  |
| If Yes, list affected DMAs: |  |  |
| ...have any areas identified by the geotechnical report as posing a public safety risk where infiltration of stormwater <br> could have a negative impact? | x |  |
| If Yes, list affected DMAs: | ...have measured in-situ infiltration rates of less than 1.6 inches / hour? | x |
| If Yes, list affected DMAs: |  |  |
| ...have significant cut and/or fill conditions that would preclude in-situ testing of infiltration rates at the final <br> infiltration surface? | all |  |
| If Yes, list affected DMAs: | x |  |
| ...geotechnical report identify other site-specific factors that would preclude effective and safe infiltration? | x |  |
| Describe here: |  |  |

If you answered "Yes" to any of the questions above for any DMA, Infiltration BMPs should not be used for those DMAs and you should proceed to the assessment for Harvest and Use below.

## D. 2 Harvest and Use Assessment

Please check what applies:Reclaimed water will be used for the non-potable water demands for the project.Downstream water rights may be impacted by Harvest and Use as approved by the Regional Board (verify with the Copermittee).
$\square$ The Design Capture Volume will be addressed using Infiltration Only BMPs. In such a case, Harvest and Use BMPs are still encouraged, but it would not be required if the Design Capture Volume will be infiltrated or evapotranspired.

If any of the above boxes have been checked, Harvest and Use BMPs need not be assessed for the site. If neither of the above criteria applies, follow the steps below to assess the feasibility of irrigation use, toilet use and other non-potable uses (e.g., industrial use).

## Irrigation Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for Irrigation Use BMPs on your site:

Step 1: Identify the total area of irrigated landscape on the site, and the type of landscaping used.
Total Area of Irrigated Landscape: 5.4 acres (15.43 acres *35\%)
Type of Landscaping (Conservation Design or Active Turf): Mixed (Active Turf in Park)
Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for irrigation use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: 10.0 acres (15.43 acres *65\%)
Step 3: Cross reference the Design Storm depth for the project site (see Exhibit A of the WQMP Guidance Document) with the left column of Table 2-3 in Chapter 2 to determine the minimum area of Effective Irrigated Area per Tributary Impervious Area (EIATIA).

Enter your EIATIA factor: 1.05
Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum irrigated area that would be required.

Minimum required irrigated area: 10.5 acres
Step 5: Determine if harvesting stormwater runoff for irrigation use is feasible for the project by comparing the total area of irrigated landscape (Step 1) to the minimum required irrigated area (Step 4).

| Minimum required irrigated area (Step 4) | Available Irrigated Landscape (Step 1) |
| :--- | :--- |
| 10.5 acres | 5.4 acres |

## Toilet Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for toilet flushing uses on your site:
Step 1: Identify the projected total number of daily toilet users during the wet season, and account for any periodic shut downs or other lapses in occupancy:

Projected Number of Daily Toilet Users: 346
Project Type: Residential Condo Estimate (108 units x 3.2 persons/unit)
Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for toilet use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: 10.0 acres (15.43 acres *65\%)
Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 21 in Chapter 2 to determine the minimum number or toilet users per tributary impervious acre (TUTIA).

Enter your TUTIA factor: 108
Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum number of toilet users that would be required.
Minimum number of toilet users: 1,080
Step 5: Determine if harvesting stormwater runoff for toilet flushing use is feasible for the project by comparing the Number of Daily Toilet Users (Step 1) to the minimum required number of toilet users (Step 4).

| Minimum required Toilet Users (Step 4) | Projected number of toilet users (Step 1) |
| :--- | :--- |
| 1,080 | 346 |

## Other Non-Potable Use Feasibility

Are there other non-potable uses for stormwater runoff on the site (e.g. industrial use)? See Chapter 2 of the Guidance for further information. If yes, describe below. If no, write N/A.

$$
\mathrm{N} / \mathrm{A}
$$

Step 1: Identify the projected average daily non-potable demand, in gallons per day, during the wet season and accounting for any periodic shut downs or other lapses in occupancy or operation.
Average Daily Demand: Projected Average Daily Use (gpd)
Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for the identified non-potable use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.
Total Area of Impervious Surfaces: Insert Area (Acres)

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 23 in Chapter 2 to determine the minimum demand for non-potable uses per tributary impervious acre.

Enter the factor from Table 2-3: Enter Value
Step 4: Multiply the unit value obtained from Step 4 by the total of impervious areas from Step 3 to develop the minimum number of gallons per day of non-potable use that would be required.
Minimum required use: Minimum use required (gpd)
Step 5: Determine if harvesting stormwater runoff for other non-potable use is feasible for the project by comparing the Number of Daily Toilet Users (Step 1) to the minimum required number of toilet users (Step 4).

| Minimum required non-potable use (Step 4) | Projected average daily use (Step 1) |
| :--- | :--- |
| Minimum use required (gpd) | Projected Average Daily Use (gpd) |

If Irrigation, Toilet and Other Use feasibility anticipated demands are less than the applicable minimum values, Harvest and Use BMPs are not required and you should proceed to utilize LID Bioretention and Biotreatment, unless a site-specific analysis has been completed that demonstrates technical infeasibility as noted in D. 3 below.

## D. 3 Bioretention and Biotreatment Assessment

Other LID Bioretention and Biotreatment BMPs as described in Chapter 2.4.7 of the WQMP Guidance Document are feasible on nearly all development sites with sufficient advance planning.

Select one of the following:
X LID Bioretention/Biotreatment BMPs will be used for some or all DMAs of the project as noted below in Section D. 4 (note the requirements of Section 3.4.2 in the WQMP Guidance Document).A site-specific analysis demonstrating the technical infeasibility of all LID BMPs has been performed and is included in Appendix 5. If you plan to submit an analysis demonstrating the technical infeasibility of LID BMPs, request a pre-submittal meeting with the Copermittee to discuss this option. Proceed to Section E to document your alternative compliance measures.

## D. 4 Feasibility Assessment Summaries

From the Infiltration, Harvest and Use, Bioretention and Biotreatment Sections above, complete Table D. 2 below to summarize which LID BMPs are technically feasible, and which are not, based upon the established hierarchy.
Table D. 2 LID Prioritization Summary Matrix

| DMA <br> Name/ID | No LID BMP Hierarchy <br> (Alternative <br> Compliance) |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | $\square$ | 2. Harvest and use | 3. Bioretention | 4. Biotreatment | $\square$ |
|  | $\square$ | $\square$ | $\square$ | $\square$ | $\square$ |
| DMA C | $\square$ | $\square$ | $\square$ | $\square$ | $\square$ |
| DMA D | $\square$ | $\square$ | $\square$ | $\square$ | $\square$ |
| DMA E | $\square$ | $\square$ | $\square$ | $\square$ | $\square$ |
| DMA F | $\square$ | $\square$ | $\square$ | $\square$ | $\square$ |
| $\square$ |  |  |  |  |  |

For those DMAs where LID BMPs are not feasible, provide a brief narrative below summarizing why they are not feasible, include your technical infeasibility criteria in Appendix 5, and proceed to Section E below to document Alternative Compliance measures for those DMAs. Recall that each proposed DMA must pass through the LID BMP hierarchy before alternative compliance measures may be considered.

DMA C - A portion of the main entrance to the site (Street A) is not able to be treated. The grades required in this area do not allow for the collection and treatment of the runoff, as the site sits well above grade from Morton Road. At 0.3 acres, DMA C represents a negligible percentage of the impervious area at less than $5 \%$.

## D. 5 LID BMP Sizing

Each LID BMP must be designed to ensure that the Design Capture Volume will be addressed by the selected BMPs. First, calculate the Design Capture Volume for each LID BMP using the $\mathrm{V}_{\text {BMP }}$ worksheet in Appendix $F$ of the LID BMP Design Handbook. Second, design the LID BMP to meet the required $\mathrm{V}_{\text {BMP }}$ using a method approved by the Copermittee. Utilize the worksheets found in the LID BMP Design Handbook or consult with your Copermittee to assist you in correctly sizing your LID BMPs. Complete Table D. 3 below to document the Design Capture Volume and the Proposed Volume for each LID BMP. Provide the completed design procedure sheets for each LID BMP in Appendix 6. You may add additional rows to the table below as needed.

Table D. 3 DCV Calculations for LID BMPs

| DMA Type/ID | DMA <br> Area (square feet) | Post- <br> Project <br> Surface <br> Type | Effective Impervious Fraction, $\mathrm{I}_{\mathrm{f}}$ | DMA <br> Runoff <br> Factor | DMA <br> Areas x <br> Runoff <br> Factor | Underground Storage North pumped to BMP 1 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | [A] |  | [B] | [C] | [A] $\times$ [C] |  |  |  |
| A | 174240 | Mlxed | 0.65 | 0.45 | 78265 | Design <br> Storm <br> Depth <br> (in) | Design Capture <br> Volume, V $\mathbf{V M P}$ (cubic feet) | Proposed <br> Volume on Plans (cubic feet) |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  | 174240 |  |  |  | 78265 | 0.63 | 4,109 | 17,511 |

[^8][E] is obtained from Exhibit A in the WQMP Guidance Document
[G] is obtained from a design procedure sheet, such as in LID BMP Design Handbook and placed in Appendix 6

Note: The final Effective Impervious Fraction, If, for Mixed surface types to be calculated and verified per Section 2.1.1 of the Riverside County Low Impact Development BMP Design Handbook, with final WQMP design, coupled with final building product design.

## Section E: Alternative Compliance (LID Waiver Program)

LID BMPs are expected to be feasible on virtually all projects. Where LID BMPs have been demonstrated to be infeasible as documented in Section D, other Treatment Control BMPs must be used (subject to LID waiver approval by the Copermittee). Check one of the following Boxes:

X LID Principles and LID BMPs have been incorporated into the site design to fully address all Drainage Management Areas. No alternative compliance measures are required for this project and thus this Section is not required to be completed.

- Or -

The following Drainage Management Areas are unable to be addressed using LID BMPs. A sitespecific analysis demonstrating technical infeasibility of LID BMPs has been approved by the CoPermittee and included in Appendix 5. Additionally, no downstream regional and/or sub-regional LID BMPs exist or are available for use by the project. The following alternative compliance measures on the following pages are being implemented to ensure that any pollutant loads expected to be discharged by not incorporating LID BMPs, are fully mitigated.

## E. 1 Identify Pollutants of Concern

Utilizing Table A. 1 from Section A above which noted your project's receiving waters and their associated EPA approved 303(d) listed impairments, cross reference this information with that of your selected Priority Development Project Category in Table E. 1 below. If the identified General Pollutant Categories are the same as those listed for your receiving waters, then these will be your Pollutants of Concern and the appropriate box or boxes will be checked on the last row. The purpose of this is to document compliance and to help you appropriately plan for mitigating your Pollutants of Concern in lieu of implementing LID BMPs.

Table E. 1 Potential Pollutants by Land Use Type

| that apply) | General Pollutant Categories |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Bacterial Indicators | Metals | Nutrients | Pesticides | Toxic <br> Organic <br> Compounds | Sediments | Trash \& Debris | Oil Grease |
| Detached Residential Development | P | N | P | P | N | P | P | P |
| Attached Residential Development | P | N | P | P | N | P | P | $\mathrm{P}^{(2)}$ |
| Commercial/Industrial Development | $P^{(3)}$ | P | $\mathrm{P}^{(1)}$ | $\mathrm{P}^{(1)}$ | $\mathrm{P}^{(5)}$ | $\mathrm{P}^{(1)}$ | P | P |
| Automotive Repair Shops | N | P | N | N | $\mathrm{P}^{(4,5)}$ | N | P | P |
| Restaurants (>5,000 ft²) | P | N | N | N | N | N | P | P |
| Hillside Development ( $>5,000 \mathrm{ft}^{2}$ ) | P | N | P | P | N | P | P | P |
| Parking Lots $\left(>5,000 \mathrm{ft}^{2}\right)$ | $P^{(6)}$ | P | $\mathrm{P}^{(1)}$ | $\mathrm{P}^{(1)}$ | $\mathrm{P}^{(4)}$ | $\mathrm{P}^{(1)}$ | P | P |
| $\square \quad$ Retail Gasoline Outlets | N | P | N | N | P | N | P | P |
| Project Priority Pollutant(s) of Concern | $\square$ | $\square$ | $\square$ | $\square$ | $\square$ | $\square$ | $\square$ | $\square$ |

$P=$ Potential
$N=$ Not Potential
${ }^{(1)}$ A potential Pollutant if non-native landscaping exists or is proposed onsite; otherwise not expected
${ }^{(2)}$ A potential Pollutant if the project includes uncovered parking areas; otherwise not expected
${ }^{(3)}$ A potential Pollutant is land use involving animal waste
${ }^{(4)}$ Specifically petroleum hydrocarbons
${ }^{(5)}$ Specifically solvents
${ }^{(6)}$ Bacterial indicators are routinely detected in pavement runoff

## E. 2 Stormwater Credits

Projects that cannot implement LID BMPs but nevertheless implement smart growth principles are potentially eligible for Stormwater Credits. Utilize Table 3-8 within the WQMP Guidance Document to identify your Project Category and its associated Water Quality Credit. If not applicable, write N/A.

Table E. 2 Water Quality Credits

| Qualifying Project Categories | Credit Percentage $^{2}$ |
| :--- | :--- |
| N/A |  |
|  |  |
|  |  |
| Total Credit Percentage $^{1}$ |  |
| ${ }^{1}$ Cannot Exceed $50 \%$ |  |

${ }^{1}$ Cannot Exceed 50\%
${ }^{2}$ Obtain corresponding data from Table 3-8 in the WQMP Guidance Document

## E. 3 Sizing Criteria

After you appropriately considered Stormwater Credits for your project, utilize Table E. 3 below to appropriately size them to the DCV, or Design Flow Rate, as applicable. Please reference Chapter 3.5.2 of the WQMP Guidance Document for further information.

Table E. 3 Treatment Control BMP Sizing

| DMA <br> Type/ID | DMA <br> Area <br> (square <br> feet) | Post- <br> Project <br> Surface <br> Type | Effective Impervious Fraction, $\mathrm{I}_{\mathrm{f}}$ | DMA <br> Runoff <br> Factor | DMA <br> Area $x$ <br> Runoff <br> Factor |  | Enter BMP Name / Identifier Here |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | [A] |  | [B] | [C] | [A] x [C] |  |  |  |  |
|  |  |  |  |  |  |  | Minimum |  | Proposed |
|  |  |  |  |  |  |  | Design Capture | Total Storm | Volume or Flow |
|  |  |  |  |  |  | Design | Volume or | Water | on Plans |
|  |  |  |  |  |  | Storm | Design Flow | Credit \% | (cubic |
|  |  |  |  |  |  | Depth <br> (in) | Rate (cubic feet or cfs) | Reduction | feet or cfs) |
|  | $\begin{aligned} & \mathrm{A}_{T} \\ & \Sigma[\mathrm{~A}] \end{aligned}=$ |  |  |  | $\Sigma=[\mathrm{D}]$ | [E] |  |  | [I] |

[B], [C] is obtained as described in Section 2.3.1 from the WQMP Guidance Document
[E] is obtained from Exhibit A in the WQMP Guidance Document
[G] is for Flow-Based Treatment Control BMPs [G] $=43,560$, for Volume-Based Control Treatment BMPs, [G] = 12
[H] is from the Total Credit Percentage as Calculated from Table E. 2 above
[I] as obtained from a design procedure sheet from the BMP manufacturer and should be included in Appendix 6

## E. 4 Treatment Control BMP Selection

Treatment Control BMPs typically provide proprietary treatment mechanisms to treat potential pollutants in runoff, but do not sustain significant biological processes. Treatment Control BMPs must have a removal efficiency of a medium or high effectiveness as quantified below:

- High: equal to or greater than $80 \%$ removal efficiency
- Medium: between $40 \%$ and $80 \%$ removal efficiency

Such removal efficiency documentation (e.g., studies, reports, etc.) as further discussed in Chapter 3.5.2 of the WQMP Guidance Document, must be included in Appendix 6. In addition, ensure that proposed Treatment Control BMPs are properly identified on the WQMP Site Plan in Appendix 1.

Table E. 4 Treatment Control BMP Selection

| Selected Treatment Control BMP <br> Name or ID | Priority Pollutant(s) of <br> Concern to Mitigate ${ }^{2}$ | Removal Efficiency <br> Percentage $^{3}$ |
| :--- | :--- | :--- |
|  |  |  |
|  |  |  |
|  |  |  |

[^9]
## Section F: Hydromodification

## F. 1 Hydrologic Conditions of Concern (HCOC) Analysis

Once you have determined that the LID design is adequate to address water quality requirements, you will need to assess if the proposed LID Design may still create a HCOC. Review Chapters 2 and 3 (including Figure 3-7) of the WQMP Guidance Document to determine if your project must mitigate for Hydromodification impacts. If your project meets one of the following criteria which will be indicated by the check boxes below, you do not need to address Hydromodification at this time. However, if the project does not qualify for Exemptions 1, 2 or 3, then additional measures must be added to the design to comply with HCOC criteria. This is discussed in further detail below in Section F.2.

HCOC EXEMPTION 1: The Priority Development Project disturbs less than one acre. The Copermittee has the discretion to require a Project-Specific WQMP to address HCOCs on projects less than one acre on a case by case basis. The disturbed area calculation should include all disturbances associated with larger common plans of development.

Does the project qualify for this HCOC Exemption?

If Yes, HCOC criteria do not apply.

HCOC EXEMPTION 2: The volume and time of concentration ${ }^{1}$ of storm water runoff for the postdevelopment condition is not significantly different from the pre-development condition for a 2 -year return frequency storm (a difference of $5 \%$ or less is considered insignificant) using one of the following methods to calculate:

- Riverside County Hydrology Manual
- Technical Release 55 (TR-55): Urban Hydrology for Small Watersheds (NRCS 1986), or derivatives thereof, such as the Santa Barbara Urban Hydrograph Method
- Other methods acceptable to the Co-Permittee

Does the project qualify for this HCOC Exemption? $\square$ Y $\square$
If Yes, report results in Table F. 1 below and provide your substantiated hydrologic analysis in Appendix 7.
Table F. 1 Hydrologic Conditions of Concern Summary

| DMA A | $\mathbf{2}$ year - $\mathbf{2 4}$ hour |  |  |
| :--- | :--- | :--- | :--- |
|  | Pre-condition | Post-condition | \% Difference |
| Time of <br> Concentration | INSERT VALUE | INSERT VALUE | INSERT VALUE |
| Volume (Cubic Feet) | INSERT VALUE | INSERT VALUE | INSERT VALUE |
| DMA B | $\mathbf{2}$ year - $\mathbf{2 4}$ hour |  |  |
|  | Pre-condition | Post-condition | \% Difference |
| Time of <br> Concentration | INSERT VALUE | INSERT VALUE | INSERT VALUE |
| Volume (Cubic Feet) | INSERT VALUE | INSERT VALUE | INSERT VALUE |

| PT3 | $\mathbf{2}$ year $\mathbf{- 2 4}$ hour |  |  |
| :--- | :--- | :--- | :--- |
|  | Pre-condition | Post-condition | \% Difference |
| Time of <br> Concentration | INSERT VALUE | INSERT VALUE | INSERT VALUE |
| Volume (Cubic Feet) | INSERT VALUE | INSERT VALUE | INSERT VALUE |

${ }^{1}$ Time of concentration is defined as the time after the beginning of the rainfall when all portions of the drainage basin are contributing to flow at the outlet.

HCOC EXEMPTION 3: All downstream conveyance channels to an adequate sump (for example, Prado Dam, Lake Elsinore, Canyon Lake, Santa Ana River, or other lake, reservoir or naturally erosion resistant feature) that will receive runoff from the project are engineered and regularly maintained to ensure design flow capacity; no sensitive stream habitat areas will be adversely affected; or are not identified on the Co-Permittees Hydromodification Sensitivity Maps.

Does the project qualify for this HCOC Exemption? $\square$
If Yes, HCOC criteria do not apply and note below which adequate sump applies to this HCOC qualifier:

## F. 2 HCOC Mitigation

If none of the above HCOC Exemption Criteria are applicable, HCOC criteria is considered mitigated if they meet one of the following conditions:
a. Additional LID BMPS are implemented onsite or offsite to mitigate potential erosion or habitat impacts as a result of HCOCs. This can be conducted by an evaluation of site-specific conditions utilizing accepted professional methodologies published by entities such as the California Stormwater Quality Association (CASQA), the Southern California Coastal Water Research Project (SCCRWP), or other Co-Permittee approved methodologies for site-specific HCOC analysis.
b. The project is developed consistent with an approved Watershed Action Plan that addresses HCOC in Receiving Waters.
c. Mimicking the pre-development hydrograph with the post-development hydrograph, for a 2-year return frequency storm. Generally, the hydrologic conditions of concern are not significant, if the post-development hydrograph is no more than $10 \%$ greater than pre-development hydrograph. In cases where excess volume cannot be infiltrated or captured and reused, discharge from the site must be limited to a flow rate no greater than $110 \%$ of the pre-development 2-year peak flow.

Note: This project has no infiltration potential. It has been designed to detain the post development runoff and discharge it at rates less than the pre-development rates. In compliance with condition C above this project will match the $2 y$ r 24 hr predevelopment runoff rates through storage volume and discharge control. It is assumed that the 6" underdrains or orifice design will be used to limit the peak runoff. Refer to Appendix 7 for detailed output files for pre and post 2yr 24-hr unit hydrographs and for basin sizing information. Summary table is below.

| Moreno Valley 33 - Area A Pre-Development |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Section G: Source Control BMPs

Source control BMPs include permanent, structural features that may be required in your project plans such as roofs over and berms around trash and recycling areas - and Operational BMPs, such as regular sweeping and "housekeeping", that must be implemented by the site's occupant or user. The MEP standard typically requires both types of BMPs. In general, Operational BMPs cannot be substituted for a feasible and effective permanent BMP. Using the Pollutant Sources/Source Control Checklist in Appendix 8 , review the following procedure to specify Source Control BMPs for your site:

1. Identify Pollutant Sources: Review Column 1 in the Pollutant Sources/Source Control Checklist. Check off the potential sources of Pollutants that apply to your site.
2. Note Locations on Project-Specific WQMP Exhibit: Note the corresponding requirements listed in Column 2 of the Pollutant Sources/Source Control Checklist. Show the location of each Pollutant source and each permanent Source Control BMP in your Project-Specific WQMP Exhibit located in Appendix 1.
3. Prepare a Table and Narrative: Check off the corresponding requirements listed in Column 3 in the Pollutant Sources/Source Control Checklist. In the left column of Table G. 1 below, list each potential source of runoff Pollutants on your site (from those that you checked in the Pollutant Sources/Source Control Checklist). In the middle column, list the corresponding permanent, Structural Source Control BMPs (from Columns 2 and 3 of the Pollutant Sources/Source Control Checklist) used to prevent Pollutants from entering runoff. Add additional narrative in this column that explains any special features, materials or methods of construction that will be used to implement these permanent, Structural Source Control BMPs.
4. Identify Operational Source Control BMPs: To complete your table, refer once again to the Pollutant Sources/Source Control Checklist. List in the right column of your table the Operational BMPs that should be implemented as long as the anticipated activities continue at the site. Copermittee stormwater ordinances require that applicable Source Control BMPs be implemented; the same BMPs may also be required as a condition of a use permit or other revocable Discretionary Approval for use of the site.

Table G. 1 Permanent and Operational Source Control Measures

| Potential Sources of Runoff <br> pollutants | Permanent Structural Source <br> Control BMPs | Operational Source Control BMPs <br> On site storm drain inletsMark all inlets with"Only Rain <br> Down the Storm Drain". |
| :---: | :--- | :--- |
| Maintain markings and provide <br> info to owners. <br> Provide stormwater pollution <br> prevention information to new <br> site owners, lessees, or <br> operators. <br> See applicable operational BMPs <br> in Fact Sheet SC-44, "Drainage <br> System Maintenance," in the <br> CASQA Stormwater Quality <br> Handbooks at |  |  |

|  |  | www.cabmphandbooks.com <br> Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains." |
| :---: | :---: | :---: |
| Landscape/Outdoor Pesticides | Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution. <br> Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions. <br> Consider using pest-resistant plants, especially adjacent to hardscape. <br> To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions. | Maintain with no or minimal pesticides. <br> See applicable operational BMPs in "What you should know for.....Landscape and Gardening" at <br> http://rcflood.org/stormwater/ <br> Provide IPM information to new owners, lessees and operators. |
| Vehicle and Equipment Cleaning | If a car wash area is not provided, describe any measures taken to discourage on-site car washing and explain how these will be enforced. HOA to discourage onsite washing. | Washwater from vehicle and equipment washing operations shall not be discharged to the storm drain system. Refer to "Outdoor Cleaning Activities and Professional Mobile Service Providers" for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at <br> http://rcflood.org/stormwater/ |
| Miscellaneous Drain or Wash Water or Other Sources <br> - Condensate drain lines <br> - Rooftop equipment | Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system. |  |

| - Roofing, gutters, and trim. | Rooftop equipment with <br> potential to produce pollutants <br> shall be roofed and/or have <br> secondary containment. <br> Avoid roofing, gutters, and trim <br> made of copper or other <br> unprotected metals that may <br> leach into runoff. |
| :--- | :--- | :--- |

## Section H: Construction Plan Checklist

Populate Table H. 1 below to assist the plan checker in an expeditious review of your project. The first two columns will contain information that was prepared in previous steps, while the last column will be populated with the corresponding plan sheets. This table is to be completed with the submittal of your final Project-Specific WQMP.

Table H. 1 Construction Plan Cross-reference

| BMP No. or ID | BMP Identifier and Description | Corresponding Plan Sheet(s) |
| :--- | :--- | :--- |
| BMP A | Basin at the southwest corner of site within the street <br> section | Preliminary BMP Siteplan |
| BMP B | Basin at the southwest corner of site north of the <br> entrance | Preliminary BMP Siteplan |
|  |  |  |
|  |  |  |

Note that the updated table - or Construction Plan WQMP Checklist - is only a reference tool to facilitate an easy comparison of the construction plans to your Project-Specific WQMP. Co-Permittee staff can advise you regarding the process required to propose changes to the approved Project-Specific WQMP.

## Section I: Operation, Maintenance and Funding

The Copermittee will periodically verify that Stormwater BMPs on your site are maintained and continue to operate as designed. To make this possible, your Copermittee will require that you include in Appendix 9 of this Project-Specific WQMP:

1. A means to finance and implement facility maintenance in perpetuity, including replacement cost.
2. Acceptance of responsibility for maintenance from the time the BMPs are constructed until responsibility for operation and maintenance is legally transferred. A warranty covering a period following construction may also be required.
3. An outline of general maintenance requirements for the Stormwater BMPs you have selected.
4. Figures delineating and designating pervious and impervious areas, location, and type of Stormwater BMP, and tables of pervious and impervious areas served by each facility. Geolocating the BMPs using a coordinate system of latitude and longitude is recommended to help facilitate a future statewide database system.
5. A separate list and location of self-retaining areas or areas addressed by LID Principles that do not require specialized O\&M or inspections but will require typical landscape maintenance as noted in Chapter 5, pages 85-86, in the WQMP Guidance. Include a brief description of typical landscape maintenance for these areas.

Your local Co-Permittee will also require that you prepare and submit a detailed Stormwater BMP Operation and Maintenance Plan that sets forth a maintenance schedule for each of the Stormwater BMPs built on your site. An agreement assigning responsibility for maintenance and providing for inspections and certification may also be required.

Details of these requirements and instructions for preparing a Stormwater BMP Operation and Maintenance Plan are in Chapter 5 of the WQMP Guidance Document.

## Maintenance Mechanism: Home Owner or Property Owners Association

Will the proposed BMPs be maintained by a Home Owners' Association (HOA) or Property Owners Association (POA)?

Include your Operation and Maintenance Plan and Maintenance Mechanism in Appendix 9. Additionally, include all pertinent forms of educational materials for those personnel that will be maintaining the proposed BMPs within this Project-Specific WQMP in Appendix 10.

## Appendix 3: Soils Information

Geotechnical Study and Other Infiltration Testing Data

# Subject; Preliminary Infiftration Testing Investigation for the Proposed Single-Family Residential Development, Tentative Tract Map No. 37557, Cthy of Moreno Valley, Riverslde County, California. 

Reference: Sikand Engineering, Coneptual Grading Plan Tract No. 37557, City of Moreno Valley, County of Riverside, State of Californio.

Based on the referenced conceptual grading plan tract no. 37557, the proposed 32.79 -acre development will consist of singlefamily residences with associated roadways, hardscaping, landscaping and an infiltration device. As per discussion with Leslie Frazier of Sikand Engineering, one infiltration basin is proposed at depths of approximately 10 feet to 12 feet.

### 4.0 SUBSURFACE EXPLORATION: XNFILTRATION TESTING

### 4.1 Subsurface Exploration

Subsurface exploration of the subject site consisted of two (2) infiltration test trench locations utilizing a backhoe, on September 4, 2018, within the proposed onsite storm water infiltration BMP locations, at depths ranging from 5 to 10.5 feet below existing grade. Earth materials encountered within the locations were classified in general accordance with the visual manual procedures of the Unified Soil Classification System (USCS). Logs of the infiltration test trenches are presented in Appendix A, and their approximate locations are depicted on the Infiltration Test Location Map (Plate 1).

Prior to the subsurface exploration work, an underground utilities clearance was obtained from Underground Service Alert of Southern California.

### 4.2 Inflitration Testing

On September 4, 2018, one (1) infiltration test was conducted within the proposed area of the infiltration device. The infiltration test trenches were labeled $\Pi-1$ and $\Pi-2$ and are depicted on the Infiltration Test Location Map (Plate 1). The tests were performed as per the referenced Riverside Technical Guidance Manual for Onsite Wastewater Treatment Systems.

Due to the very hard nature of the soil and bedrock, only the 10.5 -foot-deep test trench was dug to the required depth. The 5 -foot test trench was inadequate for testing. An 8 -inch diameter, 12 -inch long, plastic liner was placed within a 6 inch deep excavated test hole. At least 6 inches of clean water was filled within the test hole. From a fixed test point, the drop-in water level, in inches, and the amount of water used was measured and recorded at intervals over a period of at least 6 readings or until the rate for two consecutive readings was within a five percent variation. The field infiltration rates were reduced utilizing a reduction factor per the Porchet Method. The test results are presented in Table 1. The infiltration test data sheets are presented in Appendix A.

### 5.0 FINDINGS

### 5.1 Earth Materials

Based on our review of the data from the in progress geotechnical investigation and current exploration of the earth materials underlying the proposed onsite storm water infiltration BMP area, the materials encountered to the depths explored include undocumented artificial fill, older alluvial fan deposits, and granitic bedrock (tonalite). A description of the earth material soils encountered is described below:

Artificial Fill, Undocumented (Afu): During our subsurface exploration, artificial fill (undocumented) was encountered down to depths ranging from approximately 2.0 feet to 5.5 feet. The artificial fill generally consists of silty sand and clayey silt and is various shades of brown, red and black; very fine to medium grained with some coarse grains; coarse and very coarse rock fragments; dry to damp; medium dense; blocky; contains some pores; roothairs; oxidation staining and traces of concrete.

Older Alluvial Fan Deposits (Qoa); Older alluvial fan deposits encountered on the site during our subsurface exploration, was observed to be at approximately 2.0 feet to 5.5 feet deep, below the undocumented artificial fill. The alluvial fan deposits generally consist of silty sand and is characterized as various shades of brown, green, gray, and red; dry; very dense; very fine to medium grained with coarse grains; pinhole pores; roothairs; and has oxidation staining.

Bedrock: Bonzal Tonalite (Kqdi) - Bedrock of the Peninsular Ranges was present below older alluvial fan deposits in trench IT-2 at a depth of about 6.5 feet. This bedrock consists of quartz diorite and is massive; grayish white with black minerals; dry; hard to very hard; and has oxidation staining.

### 5.2 Groundwater

Groundwater was not encountered during the infiltration testing to depths of up to 10.5 feet. A review of the Califomia Department of Water Resources, Water Data Library 2018 online database indicates groundwater approximately four miles away from the general site area is about 72.9 feet below the existing ground surface at an elevation of approximately 1,638 above mean sea level (Well ID: Station 335628N1171932W001).

### 5.3 Inflltration Testing Results

The shallow infiltration testing rates for design considerations for each of proposed drainage device areas which were tested are presented in the table below.

## Infiltration Desiqn Rates

### 6.0 CONCLUSTONS AND RECOMMENDATIONS

Shallow infiltration testing for the proposed drainage devices indicated a design rate of 0.0 inches/hour, after applying reduction factors shown in Table 1 above, per the Porchet Method, at depths of approximately ten and a half (10.5) feet below the existing ground surface as presented in the above infiltration design rate table, Section 5.3 . The rate is $\mathbf{0 . 0}$ inches/hour represented by testing from infiltration test trench IT-2.

Based on the failing design rate and nature of the onsite material, we recommend the proposed infiltration basin be relocated or using an alternative infiltration design.

### 7.0 PLAN REVIEWS AND CONSTRUCTION SERVICES

This report was prepared for the exclusive use of Shizao Zheng to assist the project civil engineer in the design of the proposed infiltration systems for the proposed development. It is recommended that LGC be engaged to review infiltration device plans, grading plans, foundation plans and the final infiltration design drawings and specifications prior to construction. This is to document that the recommendations contained in this report were properly interpreted and incorporated into the project plans and specifications from a geotechnical standpoint. Plans should be forwarded to the project geotechnical engineer and/or engineering geologist for LGC for review and comments, as deemed necessary. LGC's review of infiltration device plans, grading plans, foundation plans and the final infiltration design drawings and specifications may indicate that additional subsurface exploration, laboratory testing and analysis should be performed to address areas of concern. If LGC is not accorded the opportunity to review these documents, we can not take responsibility for misinterpretation of our recommendations.

If the project plans change significantly (e.g., location and type of infiltration devices), LGC should be retained to review our original design recommendations and applicability to the revised construction. If conditions are encountered during construction that appears to be different from those indicated in this report, this office should be notified immediately. Design and construction revisions may be required.

The preliminary conclusions and recommendations provided in this report are based on review of previous geotechnical reports, infiltration testing, geologic field mapping, and geotechnical/geologic analyses to date. A representative of LGC should observe the interpolated subsurface conditions in the field during construction

We recommend that LGC be retained to provide geotechnical engineering services during future grading, infiltration device excavations, installation of infiltration materials, backfill of infiltration devices, or when an unusual soil condition is encountered at the site. This is to document compliance with the design, specifications or recommendations and to allow design changes in the event that subsurface conditions differ from those anticipated prior to start of construction.

### 8.0 INVESTIGATION LTMXTATIONS

This report is based upon information provided by the client and the project civil engineer, a limited number of subsurface excavations, field observations and percolation/infiltration tests to which we applied various methods of analysis and interpretation. The materials encountered and tested in the field on the project site are believed representative of the project area, and the conclusions and recommendations contained herein are presented on that basis. However, soil materials can vary in characteristics between points of exploration, both laterally and vertically, and those variations could affect the conclusions, recommendations, and performance of the proposed storm water infiltration device BMP systems. Fluctuations in
the level of groundwater may occur due to variations in rainfall, irrigation, and the other factors not in evidence at the time measurements were made. If this occurs, the changed conditions must be evaluated by the project geotechnical engineer and engineering geologist and design(s) adjusted as required or alternate design(s) recommended.

This report is issued with the understanding that it is the responsibility of the owner, or of his/her representative, to ensure that the information and recommendations contained herein are brought to the attention of the project engineer and incorporated into the plans, and the necessary steps are taken to see that the contractor and/or subcontractor properly implements the recommendations in the field.

The conclusions and opinions contained in this report are based on the results of the described geotechnical evaluations and represent our professional judgment. The findings, conclusions and recommendations contained in this report are to be considered tentative only and subject to confirmation by the undersigned during the construction process. Without this confirmation, this report is to be considered incomplete and LGC or the undersigned professionals assume no responsibility for its use.

The conclusions and opinions contained in this report are valid up to a period of 2 years from the date of this report. Changes in the conditions of a property can and do occur with the passage of time, whether they be because of natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate codes or standards may occur, whether they result from legislation or the broadening of knowiedge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, if any of the above mentioned situations occur, an update of this report should be completed.

This report has not been prepared for use by parties or projects other than those named or designed above. It may not contain sufficient information for other parties or other purposes.

The opportunity to be of service is appreciated. Should you have any questions regarding the content of this report, or should you require additional information, please do not hesitate to contact this office at your earliest convenience.
Our services were performed using the degree of care and skill ordinarily exercised, under similar circumstances, by engineers and geologists practicing in this or other localities. The contents of this report are professional opinions and as such, are not to be considered a guarantee or warranty.

The opportunity to be of service is appreciated. Should you have any questions regarding the content of this report, or should you require additional information, please do not hesitate to contact this office at your earliest convenience.

Respectfully submitted,
LGC Geo-Environmental, Inc.

Subject: Preliminary Geotechnical Investigation for the Proposed Single-Family Residential Development, Tentative Tract Map No. 37557, Clty of Moreno Valley, Riverside County,
California.

LGC Geo-Environmental, Inc. (LGC) is pleased to submit herewith our preliminary geotechnical investigation report for the proposed single-family residential development, Tentative Tract Map No. 37557, City of Moreno Valley, Riverside County, California.

This report presents the results of our review of published geologic/geotechnical reports, maps, and aerial photographs relative to the area that includes the site; our field exploration, geologic mapping, and laboratory testing; and geotechnical and geologic judgment, opinions, conclusions and preliminary recommendations associated with the proposed residential development.

Based on the results of the scope of our work and our review of the conceptual grading plan tract map, it is our opinion that the subject site is suitable for the proposed residential development, provided that the recommendations presented herein are incorporated into the design and implemented during grading and construction. LGC should review the final grading plans, as well as any foundation/structural plans when those become available, and revise the recommendations presented herein, if necessary.

LGC is pleased to have been retained to be of service to you during the design stages of this project. Should you have any questions regarding the contents of this report or should you require additional information, please do not hesitate to contact us.

Respectfully submilted,
LGC Geo-Environmental, Inc.

### 1.0 INTRODUCTION

This report presents the results of LGC Geo-Environmental, Inc.'s (LGC) geotechnical investigation for the proposed single-family residential development, Conceptual Grading Plan Tract Map No. 37557, City of Moreno Valley, Riverside County, California. The purpose of this geotechnical investigation was to evaluate the soil engineering properties of the surface and subsurface soil conditions on the site, and to provide geotechnical recommendations with respect to grading, construction, foundation design and other relevant geotechnical aspects related to the proposed residential development. The referenced conceptual grading plan tract map which was provided to LGC, was utilized as the base map for our Geotechnical Map (Plate 1) of the site.

Our scope of services included:

- A review of available published geologic/geotechnical literature, geologic maps, and aerial photographs pertinent to the site (Appendix A).
- Geologic mapping of the site.
- Subsurface exploration consisting of the excavating, sampling, and logging of ten (10) exploratory trenches, TR-1 through TR-8 and IT-1 through IT-2, to depths ranging from approximately 3.0 to 13.5 feet below the existing ground surface. All of the trenches were excavated using a backhoe. The trenches were excavated to evaluate the general characteristics of the subsurface geologic/geotechnical conditions on the project site, including classification of site soil, determination of depth to groundwater (if present), and to obtain representative soil samples.
- Laboratory testing of representative soil specimens collected during our subsurface exploration (Appendix C).
- Geotechnical engineering and geologic analyses of the data with respect to the proposed singlefamily development.
- Preparation of General Earthwork and Grading Specifications (Appendix D).
- Preparation of this report presenting our findings, conclusions and preliminary geotechnical design recommendations for the proposed development.

### 1.1 Proposed Construction and Grading

The referenced conceptual grading plan tract map prepared by Sikand Engineering dated June 13, 2018 indicates that the proposed development will consist of 24 single-family residential lots with associated roadways, walk ways, and hardscape, landscape areas and a water quality basin and a debris basin. It is anticipated that the structures will be up to two-stories, with wood/steel frame and masonry wall construction and some masonry block walls. This type of construction provides for relatively moderate to heavy loads imposed on the underlying foundation soil.

The referenced 80-scale tentative tract map indicates proposed cut and fill depths will be generally be approximately 32 and 22 feet, respectively. Proposed maximum cut and fill slope heights are about 55 feet and 22 feet respectively, at slope ratios of $2: 1$ (h:v) or flatter.

### 1.2 Location and Site Description

The site is located north of Jennings Court, west of Morton Road and east of the mountains at the base, in the City of Moreno Valley, in Riverside County, California. The site is irregular in shape and is approximately 32.8 -acres in size. The site is moderately covered with annual weeds and shrubs, some cluster of trees and scatter boulders, mainly at the base of the mountain. The site also contains some scattered trash and debris. The general location and configuration of the site is shown on the Site Location Map (Figure 1).

### 1.3 Topography and Drainage

The topography of the site is undulated with approximately four washes running down the site from the northeast. Elevations range from approximately 2,040 feet above mean sea level ( msl ) in the northeastern portion of the site to approximately 1,588 feet msl in the westem portion of the site.

### 1.4 Existing Improvements and Vegetation

The site has not been previously developed. Vegetation consists of a moderate to dense cover of annual weeds/shrubs

### 1.5 Research of Previous Geological and Geotechnical Data

LGC researched published and unpublished geotechnical reports and geologic data (Appendix A). Pertinent site and geologic information were incorporated into the conclusions and recommendations presented in this report.

### 1.6 Aerial Photograph Analysis

Google Earth Pro aerial imagery (from 1994 to 2018) was evaluated for the subject site and surrounding vicinity. The available information, as it pertains to the geologic and geotechnical issues of the proposed single-family residence, has been incorporated into the conclusions and recommendations presented in this report.

Our review of the aerial photographs indicates that the site has been a vacant property from 1994 to the present.

### 2.0 FIELD INVESTIGATION

### 2.1 Geologic Mapping

Surface geologic mapping of the site and accessible surrounding areas was completed by a geologist from this firm during September 2018, utilizing the referenced Conceptual Grading Plan Tract Map No. 37557 for plotting geologic observations. This information is plotted on the enclosed Geotechnical Map (Plate 1).

### 2.2 Field Exploration

Ten (10) exploratory trenches, TR-1 through TR-8 and IT-1 through IT-2, were excavated with a backhoe on September 4, 2018 and September 6, 2018 to depths of approximately 3.0 to 13.5 feet below the existing ground surface. The trenches were excavated to evaluate the general characteristics of the subsurface geologic/geotechnical conditions beneath the site, those include classification of site soil and bedrock, determination of groundwater elevations (if present), and the collection of representative soil samples.

Prior to our subsurface work, an underground utilities clearance was obtained from Underground Services Alert of Southern California. At the condlusion of the subsurface exploration, the trenches were backfilled with on-site materials with some compactive effort. Minor settlement of the backfill soil may occur over time.

Earth materials recovered from beneath the site were classified and logged by a geologist from LGC in accordance with the visual-manual procedures of the Unified Soil Classification System. The approximate locations of the exploratory borings and trenches are shown on the Geotechnical Map (Plate 1) and descriptive logs are presented in Appendix B.

Bulk samples of soil associated with the exploratory trenches were collected for laboratory testing. Bulk samples consisted of selected soil and bedrock materials obtained at various depth intervals from the exploratory trenches.

### 2.3 Laboratory Testing

During our subsurface exploration, relatively undisturbed and bulk soil samples were retained for laboratory testing. Laboratory tests were performed on selected representative samples of onsite soil materials and included maximum dry density and optimum water content, expansion index, sulfate content, chloride content, pH, resistivity, and shear strength. A brief description of the laboratory test results and test data are presented in Appendix C.

### 3.0 ETNDTNGS

### 3.1 Regional Geologic Setting

The site is located in the Peninsular Ranges Geomorphic Province of Califormia. The Peninsular Ranges are characterized by steep, elongated valleys that trend west to northwest. Locally the northwesttrending topography is controlled by the Elsinore fault zone, which extends from the San Gabriel River Valley southeasterly to the United States/Mexico border. The Santa Ana Mountains lie along the western side of the Elsinore fault zone, while the Perris Block is located along the eastern side of the fault zone. These mountainous regions are underlain by Pre-Cretaceous, metasedimentary and metavolcanic rocks and Cretaceous plutonic rocks of the Southern California Batholith. Tertiary and Quaternary rocks are generally comprised of non-marine sediments consisting of sandstone, mudstones, conglomerates, and occasional volcanic units. A map of the regional geology is presented on the Regional Geologic Map (Figure 2).

### 3.2 Local Geoloqy and Soil Conditions

Based on our review of available geological and geotechnical literature, current field mapping, exploratory trenches and exploratory borings conducted at the site, it is our understanding that the site is primarily underlain by undocumented artificial fill, older alluvial fan deposits, and Bonzal Tonalite bedrock. Each unit is described in greater detail below and presented within the exploratory trench and boring logs (Appendix B). The approximate locations of the observed geologic units are depicted on the Geotechnical Map (Plate 1).

Artificial Fill, Undocumented (Afu); During our subsurface exploration, artificial fill (undocumented) was encountered down to depths ranging from approximately 2.0 feet to 5.5 feet. The artificial fill generally consists of silty sand and clayey silt and is various shades of brown, red and black; very fine to medium grained with some coarse grains; coarse and very coarse rock fragments; dry to damp; medium dense/firm; contains some pores; roothairs; desiccated; with traces of concrete pieces.

Topsoil (No Map Symbol): Topsoil was present within portions of the site overlying the older alluvial deposits or bedrock. The topsoil consisted of silty sand which was generally very fine to coarse grained, various shades of red and brown, dry to damp, loose to medium dense, desiccated with some pores and roots. These materials were generally 0.5 foot to 2.0 foot thick where explored.

Alluvium (Qal); Alluvium is present within drainage courses on the site and consist of silty sand which is generally very fine to coarse grained, various shades of read and brown, dry to damp, loose to medium dense with some rock fragments, pores, and roots. The alluvium where explored is about 2.0 feet to 7.0 feet deep and could be as much aa 10.0 feet deep.

Older Alluvial Fan Deposits (Qoa): Older alluvial fan deposits encountered on the site during our subsurface exploration, were observed to range from the surface approximately 2.0 feet to 6.5 feet deep to as deep as 12 feet. The older alluvial fan deposits generally consist of silty sand and is

characterized as being various shades of brown, green, gray, and red; dry; medium to very dense; very fine to medium grained with coarse grains; pinhole pores; roothairs; with oxidation staining. Portions of the upper 1.0 foot to 2.0 foot are weathered.

Bedrock: Bonzal Tonalite (Qdi) - Bedrock of the Peninsular Ranges was present at the near surface, but mostly below the topsoil, alluvium and older alluvial fan deposits at depths of about 0.5 feet to 12.0 feet. The bedrock consists of quartz diorite. The bedrock was slightly to moderately weathered; various shades of black, orange, gray, yellow, brown and white; dry to damp; moderately hard to very hard; friable; fine to very coarse grained; with oxidation staining; and manganese staining.

### 3.3 Landslides

Our review of geologic literature did not indicate the presence of landslides on or directly adjacent to the site.

### 3.4 Groundwater

Groundwater was not encountered during the subsurface exploration performed for this report. Our review of the California Department of Water Resources, Water Data Library 2018 online database indicates historical depths of groundwater approximately four miles away from the general site area is about 73 feet below the existing ground surface at an elevation of approximately 1,638 above mean sea level (Well ID: Station 335628N1171932W001).

### 3.5 Caving

Caving was not encountered in the exploratory trenches. Caving may occur within excavations made into the friable portions of the alluvium, older alluvial fan deposits and weathered bedrock.

### 3.6 Surface Water

Surface water runoff relative to project design is the purview of the project civil engineer and should be designed to be directed away from all structures and walls.

### 3.7 Faulting

The geologic structure of the Southern California area is mainly dominated by northwest-trending faults associated with the San Andreas system. Faults, such as the Whittier, Elsinore, San Jacinto and San Andreas, are major faults in this system and are known to be active and may produce moderate to strong ground shaking during an earthquake. In addition, the San Andreas, Elsinore and San Jacinto faults are known to have ruptured the ground surface in historic times.

The following table is comprised of a list of the significant faults located within 20 miles of the proposed project site. We have also included the Maximum Earthquake Magnitude predicted for each of these faults.

TABLE 1
Siqnificant Faults in Proximity of the Project Site

Source: EQFAULT for Windows Version 3.00b
Active, potentially active, or inactive faults are not known to project through the site. The site does not lie within an Alquist-Priolo Earthquake Fault Hazard Zone as defined by the State of California in the Alquist-Priolo Earthquake Fault Hazard Zoning Act or a Riverside County Fault Zone Map. The possibility of damage to structures or site improvements because of ground rupture is considered negligible because active faults are not known to cross the site.

Seismicity
Secondary effects of seismic shaking resulting from large earthquakes on the major faults in the southern California region, which may affect the site, include soil liquefaction and dynamic settlement. Liquefaction is a seismic phenomenon in which loose, saturated, granular soil behave similarly to a fluid when subject to high-intensity ground shaking. Liquefaction occurs when three general conditions exist: 1) groundwater within 50 feet of the ground surface 2) low density non-cohesive (granular) soil; and 3) high-intensity ground motion. Studies indicate that saturated, loose to medium dense, near surface cohesionless soil exhibit the highest liquefaction potential, while dry, dense, cohesionless soil and cohesive soil exhibit low to negligible liquefaction potential.

Other secondary seismic effects include shallow ground rupture, seiches, and tsunamis. In general, these secondary effects of seismic shaking are a possibility throughout the Southern California region and are dependent on the distance between the site and causative fault and the onsite geology. A risk assessment of these secondary effects is provided in the following sections.

### 3.9 Settlement Analysis

The results of our subsurface exploration and laboratory testing indicate the site is underlain by approximately 2 feet to 7 feet to possibly up to 10 feet of potentially compressible and/or hydrocollapsible soil, consisting of artificial fill, undocumented, topsoil, alluvium, weathered older alluvial fan deposits and weathered bedrock. These materials exhibit the potential to settle or hydro-consolidate under the surcharge of proposed fill loads and anticipated future structural loads.

In areas where overexcavation to competent underlying older alluvial fan deposits or bedrock is accomplished, total settlement of about 0.50 -inch, and a differential settlement of about 0.25 -inch over a distance of about 40 feet could be anticipated.

### 4.0 CONCLUSTONS AND RECOMMENDATIONS

## 4.1

## General

Based on the results of our current geotechnical investigation, it is our opinion that the proposed residential development, as indicated on the conceptual grading plan tract map, is feasible from a geotechnical and geologic standpoint, provided that the following recommendations are incorporated into the design criteria and project specifications and implemented during site grading and during construction. When actual grading plans for the site and foundation/structural plans for the proposed development are available, a comprehensive plan review should be performed by LGC. Depending on the results, additional recommendations may be necessary to provide updated geotechnical design parameters for both earthwork and foundations. Grading should be conducted in accordance with local codes, the recommendations within this report, and future plan reviews. It is also our opinion that the proposed construction and grading will not adversely impact the geologic stability of adjoining properties.

The following is a summary of the primary geotechnical factors determined from our geotechnical investigation.
a The site is underlain by undocumented artificial fill, topsoil, alluvium, older alluvial fan deposits and bedrock.

- Landslides are not known to impact the site.
- Groundwater are not considered a constraint for the proposed development.
a The potential for liquefaction is considered negligible because of shallow depths to very dense older alluvial fan deposits and hard bedrock.
- Active or potentially active faults are not known to exist on the site.
- Laboratory test results of the upper soil and bedrock indicate a very low expansion potential and negligible potential for soluble sulfate effects on normal concrete and chloride effects on reinforcing steel.
- The majority of the site is underlain by approximately 2 feet to 7 feet to as much as 10 feet locally of undocumented artificial fill, topsoil, alluvium, weathered older alluvial fan deposits and weathered bedrock which may be prone to potential intolerable post-grading settlement and/or hydroconsolidation, under the surcharge of the future proposed structural loads and/or fill loads. These materials should be overexcavated to underlying competent older alluvial fan deposits or bedrock.
- The existing onsite soil from a geotechnical perspective, appear to be suitable material for use as fill, provided those are relatively free from rocks (larger than 12 inches in maximum dimension), construction debris, and organic material. It is anticipated that the onsite soil may be excavated with conventional heavy-duty construction equipment.

### 5.0 GEOLOGIC CONSTDERATIONS

### 5.1 Slopes

Cut slopes and fill slopes to the proposed slope heights and slope ratios of approximately $2: 1(\mathrm{H}: \mathrm{V})$ or flatter and should be grossly and surficially stable.

### 5.2 Faulting

Geologic hazards related to fault rupture are not known or not detected during our field exploration and site reconnaissance to be present at the site.

### 5.3 Groundwater

Adverse effects on the proposed development resulting from groundwater are not anticipated.

### 5.4 Subsidence

In consideration of the anticipated grading, recommended overexcavations, proposed structures and improvements, and subsurface material types and their conditions, unfavorable ground subsidence is not anticipated. This should be confirmed with additional consolidation testing in the older alluvial fan deposits.

### 5.5 Landsliding

Landslides or surface failures were not observed at or directly adjacent to the site. As a result, the probability of the site being affected by landslides is considered nil.

### 5.6 Ground Rupture

Ground rupture because of active faulting is not likely to occur on site because of the absence of known active fault traces on the site. Cracking because of shaking from distant seismic events is not considered a significant hazard, although it is a possibility at any site.

### 5.7 Rock Fall

The potential for rock fall is considered moderate, due to the close proximity of the mountainside. See referenced report in Appendix $A$.

### 5.8 Tsunamis and Seiches

Based on the elevation of the site with respect to sea level and its distance from large open bodies of water, the potentials for seiche and/or tsunami is considered to be negligible.

### 6.0 SEISMIC-DESIGN CONSIDERATIONS

### 6.1 Ground Motions

The site will probably experience ground shaking from moderate to large size earthquakes during the life of the proposed development. Furthermore, it should be recognized that the Southern California region is an area of high seismic risk, and that it is not considered feasible to make structures totally resistant to selsmic-related hazards.

Structures within the site should be designed and constructed to resist the effects of seismic ground motions as provided in the 2016 CBC, Section 1613. The method of design is dependent on the seismic zoning, site characterizations, occupancy category, building configuration, type of structural system, and building height.

The following seismic design parameters, presented in Table 2, were developed based on the CBC 2016 and should be used for the proposed structures. A site coordinate of $33.8066^{\circ} \mathrm{N}, 117.1195^{\circ} \mathrm{W}$ was used to derive the seismic parameters presented below.

TABLE 2
Selsmic Desian Soil Parameters

| SEISMIC DESTGN SOZL PARAMETERS (2016 CBC Section 1613) |  |
| :--- | :---: |
| Site Class Definition ASCE 7; Chapter 20 (Table 20.3-1) | D |
| Mapped Spectral Response Acceleration Parameter Ss (for 0.2 second) (Figure 1613.5.3.(1) | 1.51 |
| Mapped Spectral Response Acceleration Parameter, SI (for 1.0 second) (Figure 1613.5.3.(2) | 0.64 |
| Site Coefficient Fa (short period) [Table 1613.3.3.(1)] | 1.0 |
| Site Coefficient Fv (1-second period) [Table 1613.3.3.(2)] | 1.5 |
| Adjusted Maximum Considered Earthquake (MCE) Spectral Response Acceleration Parameter <br> SNS (short period) (Eq. 16-37) | 1.51 |
| Adjusted Maximum Considered Earthquake (MCE) Spectral Response Acceleration Parameter <br> Sm1 (1-second period) (Eq. 16-38) | 0.96 |
| Design Spectral Response Acceleration Parameter, Sos (short period) (Eq. 16-39) | 1.00 |
| Design Spectral Response Acceleration Parameter, SD1 (1-second period) (Eq. 16-40) | 0.64 |
| Mean Peak Ground Acceleration (PGAm) | 0.59 |

### 6.2 Secondary Seismic Hazards

Secondary effects of seismic activity normally considered as possible hazards to a site include several types of ground failure, as well as induced flooding. Various general types of ground failures which might occur as a consequence of severe ground shaking of the site include liquefaction, landsliding, ground subsidence, ground lurching, and shallow ground rupture. The probability of occurrence of each type of ground failure depends on the severity of the earthquake, distance from faults, topography, subsoil and groundwater conditions, in addition to other factors. Based on the proposed grading and recommended overexcavation of potentially compressible materials within areas of proposed development, the secondary effects of liquefaction and other seismic activity noted above are considered unlikely at the site.

Seismically induced flooding, which might be considered a potential hazard to a site, normally includes flooding because of a tsunami (seismic sea wave), a seiche (i.e., a wave-like oscillation of the surface of water in an enclosed basin that may be initiated by a strong earthquake) or failure of a major reservoir or retention structure upstream of the site. The site is located several miles inland from the nearest coastline of the Pacific Ocean at an elevation in excess of approximately 1630 feet above msl, the potential for seismically induced flooding because of tsunami inundation is considered nonexistent. Enclosed bodies of water do not lie adjacent to the site, the potential for seiche induced flooding at the site is considered nonexistent.

### 7.0 GEOTECHNKCAL DESIGN PARAMETERS

### 7.1 Shrinkage/Bulking and Subsidence

Volumetric changes in earth quantities occur when excavated onsite soil are replaced as properly compacted fill. The following table, Table 3, is an estimate of the shrinkage and bulking factors for the various geologic units present onsite. These estimates are based on in-place densities of the various materials and on the estimated average degree of relative compaction that will be achieved during grading.

TABLE 3
Estimated Shrinkage/Bulking

| GEOLOGIC UNIT | SHRINKAGE PERCENT |
| :---: | :---: |
| Artificial Fill, Undoctumented | $6 \%$ to $15 \%$ |
| Alluvium | $10 \%$ to $15 \%$ |
| Topsoil | $10 \%$ to $15 \%$ |
| Older Alluvial Fan Deposits (Qoa) | $9 \%$ to $13 \%$ |
| GEOLOGIC UNIT | BULKING PERCENT |
| Bedrock: Bonzal Tonalite | $0 \%$ TO $10 \%$ |

Subsidence of the older alluvial fan deposits and bedrock, because of recompaction of exposed soil or bedrock prior to fill placement, and placement of proposed fills, is estimated to be about 0.15 to 0.20 feet.

The above estimates of shrinkage are intended as an aid for project engineers in determining earthwork quantities. However, these estimates should be used with some caution since they are not absolute values. These are preliminary rough estimates which may vary with depth of removal, stripping losses, field conditions at the time of grading, etc. Handling losses, and reduction in volume due to removal of oversized material, are not included in the estimates.

### 7.2 Excavation Characteristics

The following excavation characteristics of the various material types at the site have been developed based on LGC's geologic mapping and experience with these materials in the area and are presented in Table 4 below:

To better determine if rip-ability with conventional equipment is feasible or if alternative excavation methods such as blasting is necessary, we recommend a seismic refraction survey.

### 7.3 Compressible/Collapsible Soil

The results of our laboratory in-situ moisture and density testing indicate that the existing undocumented artificial fill, topsoil, alluvium and weathered portions of the older alluvial fan deposits and bedrock are susceptible to varying degrees of intolerable settlement and/or hydro-consolidation (collapse) when a load is applied, or the soil is saturated. Consequently, these materials should be collectively overexcavated to underlying competent older alluvial fan deposits or bedrock and replaced as engineered compacted fill.

### 8.0 SITE EARTHWORK

### 8.1 General Earthwork and Grading Specifications

Earthwork and grading should be performed in accordance with applicable requirements of the grading code of the County of Riverside and in accordance with the following recommendations prepared by this firm. Grading should also be performed in accordance with the applicable provisions of the attached "Standard Grading Specifications" prepared by LGC (Appendix D), unless specifically revised or amended herein. In case of conflict, the following recommendations shall supersede those included in as part of LGC's General Earthwork and Grading Specifications (Appendix D).

### 8.2 Geotechnical Observations and Testing

Prior to the start of grading, a meeting should be held on the site with the owner or his representative, developer, grading contractor, civil engineer and geotechnical consultant to discuss the work schedule and geotechnical aspects of the grading. Rough grading, which includes clearing, overexcavation, scarification/processing and fill placement, should be accomplished under the full-time observation and testing of the geotechnical consultant. Fills should not be placed without prior approval from the geotechnical consultant.

A representative of the project geotechnical consultant should also be present onsite on a full-time basis during grading operations to document proper placement and compaction of fills, as well as to document excavations and compliance with the other recommendations presented herein.

## 8. 3 Clearing and Grubbing

Weeds/shrubs, grasses, boulders and trees in areas to be graded should be stripped and hauled offsite. Trees to be removed should be grubbed so that the stumps and major-root systems are removed and the organic materials hauled offsite. During site grading, roots, tree branches and other deleterious materials missed during clearing and grubbing operations should be removed from fill sources prior to placement.

The project geotechnical consultant or his qualified representative should be notified at the appropriate times to provide observation and testing services during clearing and grubbing operations to observe and document compliance with the above recommendations. In addition, buried structures, unusual or adverse soil conditions encountered that are not described or anticipated herein should be brought to the immediate attention of the geotechnical consultant. The existing drainage courses must be cleared of organics, debris, and sediment and widened to accommodate compaction equipment.

### 8.4 Private Sewage System Abandonment

Private sewage systems and/or other subsurface structures that may be encountered should be located, removed and/or properly abandoned. Abandonment and/or removal of septic systems that may exist should be in accordance with local codes. Seepage pits, if abandoned in-place, should be pumped clean, backfilled with gravel or clean sand jetted into place, and then capped with 2 feet or more of at least a 2 -sack slurry for a minimum distance of 2 feet outside the edge of the seepage pit. The top of the slurry cap should be at least 10 feet below proposed grade.

### 8.5 Water-Well Capping

Unknown water wells that are encountered within the site, which are to be abandoned, should be abandoned and capped under permit by the appropriate governmental agency from Riverside County. In addition, a minimum 10 -foot thick compacted fill blanket, below proposed grade, should be placed above the previously or newly-capped water wells.

## 8.6

Overexcavation and Ground Preparation
The site is underlain by approximately 2 feet to 7 feet and possibly as much as 10 feet of compressible materials. Existing undocumented artificial fill, topsoil, alluvium and weathered portions of the older alluvial fan deposits and bedrock are considered unsuitable for support of proposed fills, structures, and/or improvements, and should be overexcavated to expose underlying competent older alluvial fan deposits or bedrock. Where overexcavation and grading do not provide 5 feet or more of fill below finished pad-grade within areas for proposed structures, retaining walls, or fence walls, the area should be overexcavated to 5 feet or more below proposed grade or 2 feet or more below the bottom of footings for structures or walls, whichever is deeper. Actual depths of overexcavation should be evaluated upon review of final grading and foundation plans as well as during grading on the basis of observations and testing during grading by the project geotechnical consultant.

Prior to placing engineered fill, the exposed bottom surfaces in each overexcavated area should first be scarified to a depth of approximately 6 inches, watered or air-dried as necessary to achieve a uniform water content near optimum or slightly higher, and then compacted in place to a relative compaction of 90 percent or more (based on American Standard of Testing and Materials [ASTM] Test Method D1557).

The estimated locations, extent, and approximate depths for overexcavation of unsuitable materials are indicated on the enclosed Geotechnical Map (Plate 1). The geotechnical consultant should be provided with appropriate survey staking during grading to document that depths and/or locations of recommended overexcavation are adequate.

Sidewalls for overexcavations greater than 4 feet in height should not be steeper than 1:1 horizontal to vertical ( $\mathrm{h}: \mathrm{v}$ ) and should be periodically slope-boarded during excavation to remove loose surficial debris and facilitate geologic mapping. Flatter excavations may be necessary for stability.

The grading contractor will need to consider appropriate measures necessary to excavate existing improvements adjacent to the site without endangering those because of caving or sloughing.

## 8.7 subdrains

Following overexcavation of the topsoil, alluvium and weathered portions of the older alluvial fan deposits or bedrock, in the existing drainage course of the site a subdrain should be installed where the ultimate depth of fill below proposed grade exceeds approximately 10 feet. Tentative locations of the recommended subdrains should be evaluated once actual grading plans are developed. Actual locations should also be determined by the geotechnical consultant once conditions are exposed during grading. The subdrains will help mitigate potential buildup of hydrostatic pressures below compacted fill due to infiltration of sub-surface and surface waters.

### 8.8 Fill Suitabillity

Soil materials excavated during on-site grading are generally considered suitable for use as compacted fill provided that such soil does not contain significant amounts of trash, vegetation, organic material, construction debris, and oversize material.

### 8.9 Oversized Material

Oversized material that may be encountered during grading, greater than 6 inches, should be reduced in size or removed from the site

### 8.10 Cut/Fill Transitions and Differential Fill Thicknesses

To mitigate distress to structures and walls related to the detrimental effect of differential settlement, the cut portions should be eliminated from cut/fill transition areas in order that the entire structure or wall be founded on a approved uniform material. This should be accomplished by overexcavating the "cut" portions and shallow fill portions 5 feet or more below proposed pad grade or 2 feet below proposed
footings for structures or walls, whichever is deeper and replacing the excavated materials as properly compacted fill. Recommended depths of overexcavation are provided in the following table:

| DEPTH OF FILL ("FIII" portion) | DEPTH OF OVEREXCAVATION ("cut" portion) |
| :---: | :---: |
| Up to 15 feet | 5 feet (minimum) |
| Greater than 15 feet | One-third the maximum thickness of fill placed on the "fill" <br> portion (12 feet maximum) |

### 8.11 Benching

Where compacted fills are to be placed on natural slope surfaces inclining at 5:1 (h:v) or greater, the ground should be excavated to create a series of level benches, which have at least a minimum height of 4 feet, excavated into competent bedrock or existing compacted engineered materials. Typical benching details are described in the attached LGC "Standard Grading Specifications" (Appendix D).

### 8.12 Fill Placement

Fills should be placed in lifts not greater than 6 inches in uncompacted thickness, watered or air-dried as necessary to achieve a uniform water content of at least optimum moisture content, and then compacted in place to relative compaction of 90 percent or more. Fills should be maintained in a relatively level condition. The laboratory maximum dry density and optimum moisture content for each change in soil type should be determined in accordance with ASTM Test Method D1557.

### 8.13 Inclement Weather

Inclement weather may cause rapid erosion during mass grading and/or construction. Proper erosion and drainage control measures should be in-place during periods of inclement weather in accordance with Riverside County and California State requirements.

### 9.0 SLOPE CONSTRUCTION

### 9.1 Slope Stability

Cut slopes and fill slopes at the proposed heights at slope ratios of approximately 2:1 ( $\mathrm{H}: \mathrm{V}$ ) or flatter and should be grossly and surficially stable.

### 9.2 Fill Slopes

Following overexcavation of unsuitable materials, fill slopes and fill over cut slopes should be initiated on a minimum 15 feet wide key excavated into competent older alluvial fan deposits or bedrock if the ground gradient is steeper than $5: 1(\mathrm{H}: \mathrm{V})$ as approved by LGC. The bottom of the fill keys should be tilted at 2 percent back into the slope.

### 9.3 Cut Slopes

Proposed cut slopes may expose low-density, dry and/or cohesionless soil or bedrock with out-of-slope planner features, which will likely require stabilization by overexcavation and replacement with compacted fill.

### 9.4 Temporary Excavations

Temporary excavations varying up to a height of approximately 2 feet to 10 feet below existing grades will be necessary to accommodate the recommended overexcavation of the unsuitable soil. Based on the physical properties of the onsite soil, temporary excavations exceeding 4 feet in height should be cut back at a ratio of $1: 1(\mathrm{~h}: \mathrm{v})$ or flatter, for the duration of the overexcavation and recompaction of unsuitable soil material. Temporary slopes excavated at the above slope configurations are expected to remain stable during grading operations. However, temporary excavations should be observed by a representative of the project geotechnical consultant for any evidence of potential instability. Depending on the results of these observations, revised slope configurations may be necessary.

Other factors which should be considered with respect to the stability of the temporary slopes include construction traffic and storage of materials on or near the tops of the slopes, construction scheduling, presence of nearby walls or structures on adjacent properties, and weather conditions at the time of construction. Applicable requirements of the California Construction and General Industry Safety Orders, the Occupational Safety and Health Act of 1970, and the Construction Safety Act should also be followed.

### 10.0 POST-GRADING CONSIDERATIONS

### 10.1 Control of Surface Water and Drainage Control

Positive-drainage devices such as sloping sidewalks, graded-swales, and/or area drains, should be provided to collect and direct water away from the structure and slopes. Neither rain nor excess irrigation water should be allowed to collect or pond against building foundations. Drainage should be directed to adjacent driveways, adjacent streets or storm-drain faculties and maintained at all times. The site is in a semi-arid climate area, from a geotechnical standpoint, thus the ground surface adjacent to the structures should be sloped at a gradient of at least 2 percent for a distance of at least 10 feet. Each graded lot should be further maintained by a swale or drainage path at a gradient of at least 1 percent. Where necessary, drainage paths may be shortened by use of area drains and collector pipes. Planters with open bottoms adjacent to buildings should be avoided. Over watering must be avoided.

### 10.2 Utility Trenches

Utility-trench backfill within roadways, utility easements, under walls, sidewalks, driveways, floor slabs and any other structures or improvements should be mechanical compacted. The onsite soil should generally be suitable as trench backfill provided those are screened of rocks and other material over 3 inches in diameter and organic matter. Trench backfill should be compacted in uniform lifts (generally not exceeding 6 inches to 8 inches in uncompacted thickness) by mechanical means to at least 90 percent relative density (per ASTM Test Method D1557). Density testing, along with probing, should be performed by the project geotechnical consultant or his representative, to document proper compaction.

If trenches are shallow, the use of conventional equipment may result in damage to the utilities. Clean sand, having a sand equivalent (SE) of 30 or greater should be used to bed and shade the utilities. Sand backfill should be densified. The densification may be accomplished by jetting or flooding and then tamping to ensure adequate compaction. A representative from LGC should observe, probe, and test the backfill to verify compliance with the project specifications.

Utility-trench sidewalls deeper than 4 feet should be laid back at a ratio of $1: 1$ (h:v) or flatter or braced. A trench box may be used in lieu of shoring. If shoring is anticipated, LGC should be contacted to provide design parameters.

To avoid point-loads and subsequent distress to clay, cement or plastic pipe, imported sand bedding should be placed 1 -foot or more above pipe in areas where excavated trench materials contain significant cobbles. Sand-bedding materials should be compacted and tested prior to placement of backfill.

Where utility trenches are proposed parallel to building footings (interior and/or exterior trenches), the bottom of the trench should not be located within a 1:1 (h:v) plane projected downward from the outside bottom edge of the adjacent footing.

### 11.0 PREL TMINARY FOUNDATION DESIGN RECOMMENDATIONS

## 1.1 .1

## General

Provided that site grading is performed in accordance with the recommendations of this report, conventional shallow foundations are considered feasible for support of the proposed residential structures. Tentative foundation recommendations are provided herein. However, these recommendations may require modification depending on existing as-graded conditions within the building sites upon completion of grading.

### 11.2 Allowable-Bearing Values

An allowable-bearing value of 2,500 pounds per square foot (psf) may be used for 12 -inch wide or greater continuous footings or 24 -inch square pad footings, founded completely within in competent compacted fill at a depth of 12 -inches or more below the lowest adjacent compacted pad grade. This value may be increased by 20 percent for each additional foot of width and depth, to a value not greater than 3,500 psf. The recommended allowable-bearing value includes both dead and live loads. The bearing capacities should be re-evaluated when loads and footing sizes have been finalized.

### 11.3 Settlement

Based on the general settlement characteristics of compacted fill, the previous overexcavation recommendations in this report and anticipated loading, it is estimated the site would be subjected to a total settlement about 0.50 -inch, and a differential settlement of about 0.25 -inch over a distance of about 30 feet. It is anticipated that the majority of the settlement will occur during construction or shortly thereafter as building loads are applied.

The above settlement estimates are based on the assumption that a actual rough grading plan will be submitted to LGC for review, that additional soil tests may be deemed necessary, that revised settlement prediction may result and that grading will be performed in accordance with the final grading recommendations presented in a supplemental report and that the project geotechnical consultant will observe and/or test the soil conditions in the footing trenches.

### 11.4 Lateral Resistance

Lateral forces on footings should be resisted by passive earth resistance and friction at the bottom of the footing. Foundations should be designed for a passive earth pressure of 330 psf per foot of depth to a maximum value of $3,300 \mathrm{psf}$ and a coefficient of friction of 0.40 . The passive earth pressure incorporates a minimum factor of safety of 1.5 . The above values may be increased by $1 / 3$ when designing for short-duration wind or seismic forces.

The above values are based on footings placed directly against compacted fill. In the case where footing sides are formed, backfill placed against the footings should be compacted to 90 percent or more of maximum dry density as determined by ASTM D1557.

### 11.5 Footing Setbacks from Descending Slopes

Where structures are proposed near the tops of descending graded or natural slopes, the footing setbacks from the slope face should conform to the 2016 CBC, Figure 1808.7.1. The required setback is $\mathrm{H} / 3$ (one-third the slope height) measured along a horizontal line projected from the lower outside face of the footing to the slope face. The footing setbacks should be 5 feet or more where the slope height is 15 feet or less and vary up to 40 feet where the slope height exceeds 15 feet.

### 11.6 Building Clearances from Ascending Slopes

Building setbacks from ascending graded or natural slopes should conform with the 2016 CBC, Figure 1808.7.1, which requires a building clearance of $\mathrm{H} / 2$ (one-half the slope height) varying from 5 to 15 feet. The building clearance is measured along a horizontal line projected from the toe of the slope to the face of the building. A retaining wall may be constructed at the base of the slope to achieve the required building clearance.

### 11.7 Footing Observations

Footing trenches should be observed by the project geotechnical consultant to document that they have been excavated into competent bearing compacted fill soil. The foundation trenches should be observed prior to the placement of forms, reinforcement or concrete. The trenches should be trimmed neat, level and square. Loose, sloughed or moisture-softened soil should be removed prior to concrete placement.

Excavated materials from footing excavations should not be placed in slab-on-ground areas unless the soil are compacted to 90 percent or more of maximum dry density as determined by ASTM D1557.

### 11.8 Expansive Soil Considerations

Results of preliminary laboratory tests by LGC indicate onsite soil materials exhibit expansion potentials of VERY LOW in accordance with 2016 CBC, Chapter 18. Given that generally the expansion index of the onsite soil is VERY LOW, recommendations to mitigate the effects of expansive soil may not be required. However, expansive soil conditions of the near surface finish grade soil should be evaluated and tested for individual building pads on a pad-by-pad basis during and at the completion of rough grading to verify and/or modify the anticipated conditions. The design and construction detalls presented herein are intended to provide recommendations for the levels of expansion potential which may be evident at the completion of rough grading. Furthermore, it should be noted that additional slab thickness, footing sizes and/or reinforcement more stringent than the recommendations that follow should be provided as recommended by the project structural engineer.

### 11.9 Footing/Floor Slabs - Very Low Expansion Potential

The following are our recommendations where foundation soil exhibit VERY LOW expansion potential as classified in accordance with 2016 CBC. For this condition, it is recommended that footings and floors be constructed and reinforced in accordance with the following criteria. However, additional slab thickness, footing sizes and/or reinforcement may be required by the project architect or structural engineer.

## - Footings

- Exterior continuous footings should be founded entirely in compacted engineered fill below the lowest adjacent final exterior pad grade at minimum depths of 12 inches and 18 inches deep for one-story and for two-story construction, respectively. Interior continuous footings may be founded at a depth of 12 inches or greater for one-story and two-story structures. Continuous footings should have a minimum width of 12 inches for one-story and 15 inches for two-story structures.
- Continuous footings should be reinforced with a minimum of two (2) No. 4 bars, one near the top and one near the bottom.
- Interior isolated pad footings should be 24 inches or more square and founded at a depth of 12 inches or more for one-story and two-story structures and 18 -inches or more for threestory and four-story structures, below the lowest adjacent grade. Footings should be reinforced in accordance with the structural engineer's recommendation.
- Exterior pad footings should be 24 inches or more square and founded at a depth of 18 inches or more below the lowest adjacent grade. Isolated exterior footings should be connected with grade beams. Footings should be reinforced in accordance with the structural engineer's recommendations.
- Floor Slabs
- Concrete floor slabs should be 4 inches or more thick and reinforced with No. 3 bars spaced 24 inches or less on-centers, both ways. Slab reinforcement should be supported on concrete chairs or bricks so that the desired placement is near mid-depth.
- Concrete floors should be underlain with a moisture-vapor retarder consisting of 15 -mil thick vapor barrier. Laps within the membrane should be sealed and overlapped 12 inches. Two inches or more of clean sand should be placed above and below the membrane to promote uniform curing of the concrete.
- Prior to placing concrete, subgrade soil should be thoroughly moistened to approximately $100 \%$ of optimum water content to promote uniform curing of the concrete and reduce the development of shrinkage cracks. The moisture content should penetrate to a minimum depth of 12 inches.

### 12.0 RETATNING WALLS

### 12.1 Lateral Earth Pressures and Retaining Wall Design Parameters

Conventional footings for retaining walls founded entirely in properly compacted fill should be embedded at least 18 inches below lowest adjacent grade. At this depth, an allowable uniform bearing capacity of 2,500 psf may be assumed for retaining walls founded in competent compacted fill.

The following are lateral earth pressures are recommended for retaining walls up to 10 feet high that may be proposed. The recommended lateral pressures for approved on-site or import soil (with an expansion index of $\mathbf{2 0}$ or less and an angle of internal friction (phi) of at least $\mathbf{3 6}$ degrees) for level or sloping backfill are presented in Table 5. Onsite soil should be screened of rocks and other material over 3 inches in diameter.

TABLE 5
Lateral Earth Pressures

| CONDITIONS | EQUIVALENT FLUTD WEIGHT (pCf) |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Level Backfill (up to 6 feet) | Level BackiIII Dynamic ( $>6$ feet to 10 feet) | 2:1 Backfill Ascending (up to 6 feet) | 2:1 Backfill Ascending-Dynamic ( $>6$ feet to 10 feet) |
| Active | 35 | 55 | 50 | 70 |
| At-Rest | 55 | 75 | 80 | 100 |
| Passive | 330 | 330 | 190 | 190 |

The friction coefficient of 0.40 may be used at the concrete footing and soil interface for sliding resistance. Wall footings should be designed in accordance with structural considerations.

Embedded structural walls should be designed to resist the lateral earth pressures. Restrained structural walls should be designed for at rest conditions. The magnitude of those pressures depends on the amount of deformation that the wall can yield under load. If the wall can yield enough to mobilize the full shear strength of the soil, it can be designed for "active" pressure. If the wall cannot yield under the applied load, the shear strength of the retained soil cannot be mobilized and the earth pressure will be higher. Such walls should be designed for "at-rest" conditions. If a structure moves toward the soil, the resulting resistance developed by the soil is the "passive" resistance.

The equivalent fluid pressure values assume free-draining conditions and a soil expansion index of $\mathbf{2 0}$ or less. If conditions other than those assumed above are anticipated, revised equivalent fluid pressure values should be provided on an individual-case basis by the geotechnical engineer.

Surcharge loading effects from the adjacent structures should be evaluated by the geotechnical and structural engineers.

### 12.2 Footing Embedments

The base of retaining wall footings constructed on level ground should be founded at a depth of 18 inches or more below the lowest adjacent final grade. Where retaining walls are proposed on or within 15 feet from the top of an adjacent descending fill slopes, the footings should be deepened such that a horizontal clearance of $\mathrm{H} / 3$ or more (one-third the slope height) is maintained between the outside bottom edges of the footings and the face of the slope but not to exceed 15 feet nor be less than 5 feet. The above recommended footing setbacks are preliminary and may be revised based on site specific soil conditions. Footing or pier excavations should be observed by the project geotechnical representative to document that the footing trenches have been excavated into competent bearing soil and to the embedments recommended above. These observations should be performed prior to placing forms or reinforcing steel.

### 12.3 Drainage

All retaining wall structures should be provided with appropriate wall drainage and appropriately waterproofed. Outlet pipes should be sloped to drain to a suitable outlet. It should be noted that that recommended wall drains does not provide protection against seepage through the face of the wall and/or efflorescence. If such seepage or efflorescence is undesirable, retaining walls should be waterproofed to reduce this potential.

Weep holes or open vertical masonry joints should be provided in retaining walls 3 feet or less in height to reduce the likelihood of entrapment of water in the backfill. Weep holes, if used, should be 3 inches or more in diameter and provided at intervals of 6 feet or less along the wall. Open vertical masonry joints, if used, should be provided at 32 -inch or less intervals. A continuous gravel fill, 12 inches by 12 inches, should be placed behind the weep holes or open masonry joints. The gravel should be wrapped in filter fabric to reduce infiltration of fines and subsequent clogging of the gravel. Filter fabric may consist of Mirafi 140 N or equivalent.

In lieu of weep holes or open joints, for retaining walls less than 3 feet, a perforated pipe and gravel subdrain may be used. Perforated pipe should consist of 4-inch or more diameter PVC Schedule 40 or ABS SDR-35, with the perforations laid down. The pipe should be embedded in 1.5 cubic feet per foot of 0.75 or 1.5 -inch open graded gravel wrapped in Mirafi 140 N filter fabric.

Retaining walls greater than 3 feet high should be provided with a continuous backdrain for the mean full height of the wall. This drain could consist of geosynthetic drainage composite, such as Miradrain 6000 or equivalent, or a permeable drain material, placed against the entire backside of the wall. If a permeable drain material is used, the backdrain should be 1 or more feet thick. Caltrans Class II permeable material or open graded gravel or crushed stone may be used as permeable drain material. If gravel or crushed stone is used, it should have less than 5 percent material passing the No. 200 sieve. The drain should be
separated from the backfill with a geofabric. The upper 1-foot of the backdrain should be covered with compacted fill. A drainage pipe consisting of 4 -inch diameter perforated pipe (described above) surrounded by 1 cubic foot per foot of gravel or crushed rock wrapped in a filter fabric should be provided along the back of the wall. The pipe should be placed with perforations down, sloped at 2 percent or more to discharge towards an appropriate outlet through a solid pipe. The pipe should outlet away from structures and slopes. The outside portions of retaining walls supporting backfill should be coated with an approved waterproofing compound to inhibit infiltration of moisture through the walls.

### 12.4 Temporary Excavations

Retaining walls should be constructed and backfilled as soon as possible after backcuts are excavated. Prolonged exposure of backcut slopes may result in localized slope instability. To facilitate retaining wall construction, the lower 4 feet of temporary slopes may be cut vertical and the upper portions exceeding a height of 4 feet should be cut back at a gradient of $1: 1$ (h:v) or flatter for the duration of construction. Temporary slopes should be observed by the project geotechnical consultant for evidence of potential instability. Depending on the results of these observations, flatter slopes may be necessary. The potential effects of various parameters such as weather, heavy equipment travel, storage near the tops of the temporary excavations and construction scheduling should also be considered in the stability of temporary slopes. Water should not be permilted to drain towards the slope. Surcharges from equipment, spoil piles, etc., should not be allowed within 10 feet of the top of the slope.

All excavations should be made in accordance with Cal/OSHA. Excavation safety is the sole responsibility of the contractor.

### 12.5 Retaining Wall Backfill

The retaining wall backfill soil (with an expansion index of 20 or less and an angle of internal friction of at least 36 degree) should be placed in 6 to 8 inch loose lifts, moisture-conditioned or air-dried as necessary to achieve near optimum water conditions, and compacted to at least 90 percent relative density (based on ASTM Test Methods D2922 and D3017).

### 13.0 MASONRY GARDEN WALLS

### 13.1 Construction on Level Ground

Where masonry screen walls or garden walls are proposed on level ground and 5 feet or more from the tops of descending slopes, the footings for these walls may be founded at a depth of 18 inches or more below the lowest adjacent final grade. These footings should also be reinforced with two No. 4 bars, one top and one bottom and in accordance with the structural engineer's recommendations.

### 13.2 Construction Joints

In order to mitigate the potential for unsightly cracking related to the effects of differential settlement, positive separations (construction joints) should be provided in the walls at horizontal intervals of approximately 25 feet and at each corner. The separations should be provided in the blocks only and not extend through the footings. The footings should be placed monolithically with continuous rebar to serve as effective "grade beams" along the full lengths of the walls.

### 14.0 CONCRETE FLATWORK

### 14.1 Nonstructural Concrete Flatwork

Concrete flatwork (such as walkways, driveways, patios, bicycle trails, etc.) has a high potential for cracking because of changes in soil volume related to soil-moisture fluctuations. To reduce the potential for excessive cracking and lifting, concrete should be designed in accordance with the minimum guidelines outlined in Table 6. These guidelines will reduce the potential for irregular cracking and promote cracking along construction joints, but will not eliminate all cracking or lifting. Thickening the concrete and/or adding additional reinforcement will further reduce cosmetic distress.

TABLE 6
Minimun Recommendations for Nonstructural Concrete Flatwork Over Very Low Expansive Soll

|  | Private Sidewalks | Private Drives | Patios/ Entryways | City Sidewalk Curb and Gutters |
| :---: | :---: | :---: | :---: | :---: |
| Minimum Thickness (In.) | 4 (nominal) | 4(full) | 4 (full) | City/Agency Standard |
| Presaturation | Presoak to 12 inches | Presoak to 12 inches | Presoak to 12 inches | City/Agency Standard |
| Reinforcement | - | No. 3 at 24 inches on centers | No. 3 at 24 inches on centers | City/Agency Standard |
| Thickened Edge | - | $8^{\prime \prime} \times 8^{\prime \prime}$ | $8^{\prime \prime} \times 8^{\prime \prime}$ | City/Agency Standard |
| Crack Control | Saw cut or deep open tool joint to a minimum of $1 / 3$ the concrete thickness | Saw cut or deep open tool joint to a minimum of $1 / 3$ the concrete thickness | Saw cut or deep open tool joint to a minimum of $1 / 3$ the concrete thickness | City/Agency Standard |
| Maximum Joint Spacing | 5 feet | 10 feet or quarter cut whichever is closer | 6 feet | City/Agency Standard |

### 14.2 Joint Spacing

To reduce the potential for unsightly cracking, concrete sidewalks and patio type slabs should be provided with construction or expansion joints every 6 feet or less. Concrete driveway slabs should be provided with construction or expansion joints every 10 feet or less, with an aspect ratio of 1.2, to provide rectangular shaped joint patterns.

### 14.3 Subgrade Preparation

As a further measure to reduce cracking of concrete flatwork, the upper 12 inches of subgrade soil below concrete-flatwork areas should first be compacted to a relative density of 90 percent of more and then thoroughly wetted to achieve a moisture content that is equal to or slightly greater than optimum moisture content. This moisture should extend to a depth of 12 inches or more below subgrade and maintained in the soil during placement of concrete. Pre-watering of the subgrade will promote uniform curing of the concrete and reduce the potential for the development of shrinkage cracks. A representative of the project geotechnical consultant should observe and document the density and moisture content of subgrade soil and depth of moisture penetration prior to placing concrete.

### 15.0 PLANTERS

Area drains should be extended into planters that are located within 5 feet of building walls, foundations, retaining walls and masonry garden walls to reduce excessive infiltration of water into the underlying foundation soil. The surface of the ground in these areas should be sloped at a gradient of 2 percent or more away from the walls and foundations. Drip-irrigation systems are also recommended to reduce ovenvatering and subsequent saturation of the adjacent foundation soil.

### 16.0 SOIL CORROSTVITY

### 16.1 Corrosivity to Concrete and Metal

The National Association of Corrosion Engineers (NACE) defines corrosion as "a deterioration of a substance or its properties because of a reaction with its environment". From a geotechnical viewpoint, the "environment" is the prevailing foundation soil and the "substances" are the reinforced concrete foundations or various buried metallic elements such as rebar, piles, pipes, etc., which are in direct contact with or within close vicinity of the foundation soil.

In general, soil environments that are detrimental to concrete have high concentrations of soluble sulfates. ACI 318R-05, Table 4.3.1 provides specific guidelines for the concrete mix design based on different amount of soluble sulfate content. The minimum amount of chloride ions in the soil environment that are corrosive to steel, either in the form of reinforcement protected by concrete cover, or plain steel substructures such as steel pipes or piles, is 500 ppm per California Test 532 and ACI 318R-05, Table 4.4.1.

The corrosion potential of the onsite materials was evaluated for its effect on steel and concrete. The corrosion potential was evaluated using the results of laboratory tests on representative samples obtained during our field exploration. Laboratory testing was performed to evaluate pH , minimum electrical resistivity and chloride and soluble sulfate content. Based on testing performed during this investigation within the project site, the onsite soil are classified as having a negligible sulfate exposure condition in accordance with ACI 318R-05, Table 4.3.1, and negligible chloride exposure condition in accordance with ACI 318R-05, Table 4.4.1. Based on laboratory testing of on-site soil it is also our opinion that onsite soil should be considered highly corrosive to buried metals due to the low resistivity. Metal piping should be corrosion-protected or consideration should be given to using plastic piping instead of metal or plastic sleeving around the metal pipe.

Despite the minimum recommendation above, LGC is not a corrosion-engineering firm. Therefore, we recommend that you consult with a competent corrosion engineer and conduct additional testing (if required) to evaluate the actual corrosion potential of the site and to provide recommendations to reduce the corrosion potential with respect to the proposed improvements. The recommendations of the corrosion engineer may supersede the above requirements.

These recommendations are based on the current and previous samples of the subsurface soil or bedrock. The initiation of grading at the site could blend various soil types and import soil may be used locally. These changes made to the foundation soil could alter sulfate-content levels. Accordingly, it is recommended that additional testing be performed at the completion of grading.

### 17.0 PLAN REVIEWS AND CONSTRUCTION SERVICES

This report is a preliminary geotechnical investigation prepared for the exclusive use of Mr. Shizao Zheng to assist the project engineer and architect in the design of the proposed development. It is recommended that LGC be engaged to review the actual grading plans, foundation plans and final design drawings and specifications prior to construction. This is to document that the recommendations contained in this report have
been properly interpreted and/or are incorporated into the project specifications. LGC's review of such plans and those that might result from the recommended reviews may indicate that additional subsurface exploration, laboratory testing and analysis should be performed to address areas of concern. If LGC is not accorded the opportunity to review those documents, LGC cannot take responsibility for misinterpretation of our recommendations.

We recommend that LGC be retained to provide geotechnical engineering services during both the rough grading and construction phases of the work. This is to document compliance with the design, specifications or recommendations and to allow design changes in the event that subsurface conditions differ from those anticipated prior to start of construction.

If the project plans change significantly (e.g., building loads or type of structures or grading), LGC should be retained to review our original design recommendations and applicability to the revised construction. If conditions are encountered during construction that appear to be different than those indicated in this report, this office should be notified immediately. Design and construction revisions may be required.

### 18.0 LTMITATIONS

Our services were performed using the degree of care and skill ordinarily exercised, under similar circumstances, by engineers and geologists practicing in this or similar localities. The professional opinions contained herein were derived in accordance with current standards of practice for preliminary reports. Other warranties, expressed or implied, are not made or implied as to the conclusions and professional advice included in this report. The soil samples taken and submitted for laboratory testing, the observations made and the in-situ field testing performed are believed representative of the entire project; however, soil and geologic conditions can vary in characteristics between excavations, both laterally and vertically and may be different than our preliminary findings. If this occurs, the changed conditions must be evaluated by the project geotechnical engineer and engineering geologist and design adjustments may be required recommended.

This report is issued with the understanding that it is the responsibility of the owner, or of his/her representative, to ensure that the information and recommendations contained herein are brought to the attention of the project engineers and incorporated into the plans, and that necessary steps are taken to assure that the contractor and/or subcontractor properly implements the recommendations in the field during construction. The contractor and/or subcontractor should notify the owner if they consider any of the recommendations presented herein to be unsafe.

The conclusions and opinions contained in this report are based on the results of our scope of work and represent our professional judgment. The findings, conclusions and recommendations presented in this report are to be considered preliminary only and subject to confirmation by LGC during the construction process. Without this confirmation, this report is to be considered incomplete; and LGC will not assume any responsibility for its use.

The conclusions and opinions contained in this report are valid up to a period of 2 years from the date of this report. Changes in the conditions of a property can and do occur with the passage of time, whether those be because of natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate codes or standards may occur, whether those result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside LGC's control. Therefore, pending such changes made or if the scope of this project changes, an update of this report should be completed.

This report was not prepared for use by parties or projects other than those named or designed above and is otherwise considered insufficient for other parties or other purposes.

## APPENDIX B

## EXPLORATORY TRENCH LOGS

## APPENDTXB

Field Exploration

## B-1

## General

Geologic mapping of the site was performed by LGC's personnel. The locations of the exploratory excavations were chosen to obtain site and trench specific subsurface information needed to achieve the objective for this investigation.

A visual survey was conducted to verify that the proposed excavations would not encounter any subsurface utility lines. Underground utilities were not encountered during the field exploratory program.

## B-2 Excavailon and Sampling

Surface geologic mapping of the site and accessible surrounding areas was completed by a geologist from this firm during September 2018, utilizing the referenced Conceptual Grading Plan Tract Map No. 37557 for plotting geologic units. This information is plotted on the enclosed Geotechnical Map (Plate 1).

Ten (10) exploratory trenches, TR-1 through TR-8 and $\Pi-1$ through $\Pi-2$, were excavated with a backhoe on September 4, 2018 and September 6, 2018 to depths of approximately 3.0 to 13.5 feet below the existing ground surface. The trenches were excavated to evaluate the general characteristics of the subsurface geologic/geotechnical conditions at the subject site, which consisted of classification of site soil, determination of groundwater elevations (if present), and collection of representative soil and bedrock samples.

Prior to our subsurface work, an underground utilities clearance was obtained from Underground Service Alert of Southern California. At the conclusion of the subsurface investigation, test pits were backfilled with native materials. Minor settlement of the backfill soil may occur over time.

During our subsurface investigation, representative bulk samples were retained for laboratory testing. Laboratory testing was performed on selected representative samples of onsite soil and/or bedrock materials and included maximum dry density and optimum water content, expansion index, sulfate content, chloride content, pH, resistivity, grain size analysis, and direct shear. A discussion of the tests performed and a summary of the results are presented in Appendix C. Moisture and density test results are presented on the trench logs which are presented on the following pages.

## B-3 Miscellaneous

The trench logs describe the earth materials encountered, sampling method used, and the results of field and laboratory tests. The logs also show the test pit number, date of completion, and the name of the logger. A geologist logged the trenches in accordance with the Standard Practice for Description and Identification of Soils (Visual-Manual Procedure) ASTM D2488-93. The boundaries between soil types shown on the logs are approximate and the transition between different soil layers may be gradual. The logs of the trenches are presented on the following pages.

## APPENDIX C

## LABORATORY TESTING PROCEDURES AND TEST RESULTS

## APPENDXX C

## Laboratony Testing Procedures and Test Results

The laboratory testing program was directed towards providing quantitative data relating to the relevant engineering properties of the soil. Samples considered representative of site conditions were tested in general accordance with American Society for Testing and Materials (ASTM) procedure and/or California Test Methods (CTM), where applicable. The following summary is a brief outline of the test type and a table summarizing the test results.

Soll Classification: Soil were classified according the Unified Soil Classification System (USCS) in accordance with ASTM Test Methods D2487 and D2488. The soil classifications (or group symbol) are shown on the laboratory test data, and boring logs.

Maximum Dry Density Tests: The maximum dry density and optimum water content of typical materials were determined in accordance with ASTM test method D1557. The test results are presented in the table below:

| SAMPLE <br> LOCATION | SAMPLE DESCRIPTION <br> (USCS) | MAXXMUM DRY DENSTTY <br> (\% by weight) | OPTIMUM WATER <br> CONTENT (\%) |
| :---: | :---: | :---: | :---: |
| $\Pi-1 @ 0-2^{\prime}$ | Silty SAND/Clayey SILT (SM/ML) | 135.9 | 7.0 |
| TR-4 @ $2-4^{\prime}$ | Bedrock; Quartz Diorite | 133.2 | 7.0 |
| TR-8@ $4-6^{\prime}$ | Silty SAND/Clayey SILT (SM/ML) | 128.3 | 9.0 |

Expansion Index: The expansion potential of a selected sample was evaluated by the Expansion Index Test, U.B.C. Standard No. 18-2 and/or ASTM test method D4829. Specimens are molded under a given compactive energy at or near the optimum moisture content and approximately 50 percent saturation or approximately 90 percent relative compaction. The prepared 1 -inch thick by 4 -inch diameter specimens are loaded to an equivalent 144 psf surcharge and are inundated with tap water until volumetric equilibrium is reached. The results of these tests are presented in the table below:

| SAMPLE <br> LOCATION | SAMPLE <br> DESCRIPTION(USCS) | EXPANSTON <br> INDEX | EXPANSTON <br> POTENTIAL* |
| :---: | :---: | :---: | :---: |
| TR-8@4-6' | Silty SAND/Clayey SILT (SM/ML) | 19 | Very Low |

*Per ASTM D4829
Soluble Sulfates: The soluble sulfate content of selected samples was determined by standard geotechnical methods (CTM 417). The soluble sulfate content is used to determine the appropriate cement type and maximum water-cement ratios. The test results are presented in the table below:

| SAMPLE <br> LOCATION | SAMPLE | SULFATE CONTENT | SULFATE <br> EXPOSUURE |
| :---: | :---: | :---: | :---: |
| TR-8@ 4-6' | Silty SAND/Clayey SILT (SM/ML) | Non-Detect | Negligible |

*Per ACI 318R-05 Table 4.3.1
Chloride Content: Chloride content was tested with CTM 422. The results are presented below:

| SAMPLE LOCATION | SAMPLE DESCRIPTION (USCS) | CHLORIDE CONTENT (Ppm) |
| :---: | :---: | :---: |
| TR-8@4-6' | Silty SAND/Clayey SILT (SM/ML) | 128 |

Minimum Resistivily and pH Tests: Minimum resistivity and pH tests were performed with CTM 643. The results are presented in the table below:

| SAMPLE <br> LOCATION | SAMPLE | DHH | MINIMUM RESISTIVITY <br> (ohm-Cm) |
| :---: | :---: | :---: | :---: |
| TR-8@ $4-6^{\prime}$ | Silly SAND/Clayey SILT (SM/ML) | 7.5 | 1,100 |

Direct Shear: Direct shear tests were performed on selected remolded samples, which were soaked for a minimum of 24 hours under a surcharge equal to the applied normal force during testing. After transfer of the sample to the shear box, and reloading the sample, pore pressures set up in the sample due to the transfer were allowed to dissipate for a period of approximately 1 hour prior to application of shearing force. The samples were tested under various normal loads, a motor-driven, strain-controlled, direct-shear testing apparatus at a strain rate of less than 0.001 to 0.5 inch per minute (depending upon the soil type). The graphical test results are presented in the table below:

| SAMPLE LOCATION | SAMPLE DESCRTPTION | ANGLE OF XNTERNAL <br> FRICTION (degrees) | COHESTON <br> (psf) |
| :---: | :---: | :---: | :---: |
| TR-8@ $4 \cdot 6^{\prime}$ | Silty SAND/Clayey SILT (SM/ML) | 36 | 20 |

## APPENDIX D

## GENERAL EARTHWORK AND GRADING SPECIFICATIONS

## APPENDIX D

General Earthwork and Grading Specifications

### 1.0 General

1.1 Intent: These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these more general Specifications. Observations of the earthwork by the project Geotechnical Consultant during the course of grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).
1.2 The Geotechnical Consultant of Record: Prior to commencement of work, the owner shall employ a qualified Geotechnical Consultant of Record (Geotechnical Consultant). The Geotechnical Consultant shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of the grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During the grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owmer, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of the subgrade and fill materials and perform relative compaction testing of fill to confirm that the attained level of compaction is being accomplished as specified. The Geotechnical Consultant shall provide the test results to the owner and the Contractor on a routine and frequent basis.
1.3 The Earthwork Contractor: The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, molsture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The Contractor shall be solely responsible for performing the grading in accordance with the project plans and specifications. The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of "equipment" of work and the estimated quantities of dally earthwork contemplated for the site prior to commencement of grading.

The Contractor shall inform the owner and the Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate personnel will be available for observation and testing. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory
conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are rectified. It is the contractor's sole responsibility to provide proper fill compaction.

### 2.0 Preparation of Areas to be Filled

2.1 Clearing and Grubbing: Vegetation, such as brush, grass, roots, and other deleterious material shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant.

The Geotechnical Consultant shall evaluate the extent of these removals depending on specific site conditions. Earth fill material shall not contain more than 1 percent of organic materials (by volume). No fill lift shall contain more than 10 percent of organic matter. Nesting of the organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area.

As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, coolant, etc.) have chemical constituents that are considered to be hazardous waste. As such, the indiscriminate dumping or spillage of these fluids onto the ground may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed. The contractor is responsible for all hazardous waste relating to his work. The Geotechnical Consultant does not have expertise in this area. If hazardous waste is a concern, then the Client should acquire the services of a qualified environmental assessor.
2.2 Processing: Existing ground that has been dedared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Existing ground that is not satisfactory shall be overexcavated as specified in the following section. Scarification shall continue until soil are broken down and free of oversize material and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction.
2.3 Overexcavation: In addition to removals and overexcavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured or otherwise unsuitable ground shall be overexcavated to competent ground as evaluated by the Geotechnical Consultant during grading.
2.4 Benching: Where fills are to be placed on ground with slopes steeper than 5:1 (horizontal to vertical units), the ground shall be stepped or benched. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than $5: 1$ shall also be benched or otherwise overexcavated to provide a flat subgrade for the fill.
2.5 Eva/uation/Acceptance of Fill Areas: All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.
3.1 General: Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soil of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soll to achieve satisfactory fill material.
3.2 Oversize: Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 8 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or underground construction.
3.3 Import: If importing of fill material is required for grading, proposed import material shall meet the requirements of Section 3.1. The potential import source shall be given to the Geotechnical Consultant at least 48 hours ( 2 working days) before importing begins so that its suitability can be determined and appropriate tests performed.

### 4.0 Fill Placement and Compaction

4.1 Fill Lavers: Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.
4.2 Fill Moisture Condifioning: Fill soil shall be watered, dried back, blended, and/or mixed, as necessary to attain relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with the American Society of Testing and Materials (ASTM Test Method D1557-91).
4.3 Compaction of Fill: After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557-91). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction with uniformity.
4.4 Compaction of Fill Slopes: In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557-91.
4.5 Compaction Testing: Field tests for moisture content and relative compaction of the fill soil shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).
4.6 Frequency of Compaction Testing: Tests shall be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill soil embankment. In addition, as a
guideline, at least one (1) test shall be taken on slope faces for each 5,000 square feet of slope face and/or each 10 feet of vertical height of slope. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

### 4.7 Compaction Test Locations:

The Geotechnical Consultant shall document the approximate elevation and horizontal coordinates of each test location. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so that the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two (2) grade stakes within a horizontal distance of 100 feet and vertically less than 5 feet apart from potential test locations shall be provided.

### 5.0 Subdrain Installation

Subdrain systems shall be installed in accordance with the approved geotechnical report(s) and grading plan. The Geotechnical Consultant may recommend additional subdrain and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed by a land surveyor/civil engineer for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys.

## CANYON \& STREET SUBDRAINS

TYPICAL BUTTRESS/ STABILIZATION FILL DETAIL

## OVERSIZE <br> ROCK DISPOSAL

FILL SLOPE

## CUT-OVER-FILL SLOPE

*CUT FACE SHOULD BE CONSTRUCTED PRIOR TO FILL PLACEMENT

Note: Natural slopes steeper than 5:1 (h:v) must be benched.

## KEYING AND BENCHING

# Appendix 4: Historical Site Conditions None Provided at this time 

# Appendix 5: LID Infeasibility 

LID Technical Infeasibility Analysis
See pages 11 thru 16 of the Preliminary Project Specific WQMP.
Per project geotechnical report and infiltration report, the site does not meet minimum infiltration rate of $1.6 \mathrm{in} / \mathrm{hr}$. Thus, infiltration is not a feasible treatment option.

Per Section D. 2 Harvest and Use is not a possibility as the site does not meet minimum requirements for landscape or toilet use.

DMA C - A portion of the main entrance to the site (Street A) and Morton Road is not able to be treated. The grades and conditions of the road in this area do not allow for the collection and treatment of the runoff, as the site sits well above grade from Morton Road. Also, the project is at a highpoint in Morton Rd so any acceptance and routing of street flow should be further downstream along Morton Road. The areas around Morton Road, including any future right of way, is also unable to provide for treatment as the grades in the area fall off significantly to the southwest. Runoff from this area will continue in the existing condition, by flowing into the natural channel southwest of the road.

At 0.3 acres, DMA C represents a negligible percentage of the impervious area at less than $5 \%$.

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value

| Unit | Time ( Hr. ) | Pattern Percent | Storm Rain ( $\mathrm{In} / \mathrm{Hr}$ ) | Loss rate(In./Hr) |  | Effective(In/Hr ) |

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value

| Unit | Time | Pattern | Storm Rain | Loss rate(In./Hr) |  | Effective |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

100 YEAR Area rainfall data:

The following loss rate calculations reflect use of the minimum calculated loss
rate subtracted from the Storm Rain to produce the maximum Effective Rain value
Unit Time Pattern Storm Rain Loss rate(In./Hr) Effective

|  | ( Hr.$)$ | Percent | ( $\mathrm{In} / \mathrm{Hr}$ ) | Max | Low | ( $\mathrm{In} / \mathrm{Hr}$ ) |

    **** RETARDING BASIN ROUTING ****
```

User entry of depth-outflow-storage data

-     - Total number of inflow hydrograph intervals $=290$
Hydrograph time unit $=5.000$ (Min.)
Initial depth in storage basin $=0.00(F t$.

```
Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)
```

## Appendix 8: Source Control

Pollutant Sources/Source Control Checklist

## STORMWATER POLLUTANT SOURCESISOURCE CONTROLCHECKLIST

## How to use this worksheet（also see instructions in Section G of the WQMP Template）：

1．Review Column 1 and identify which of these potential sources of stormwater pollutants apply to your site．Check each box that applies．
2．Review Column 2 and incorporate all of the corresponding applicable BMPs in your WQMP Exhibit．
3．Review Columns 3 and 4 and incorporate all of the corresponding applicable permanent controls and operational BMPs in your WQMP．Use the format shown in Table G．1on page 23 of this WQMP Template．Describe your specific BMPs in an accompanying narrative，and explain any special conditions or situations that required omitting BMPs or substituting alternative BMPs for those shown here．

| IF THESE SOURCES WILL BE ON THE PROJECT SITE ．．． | ．．．THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs，AS APPLICABLE on |  |  |
| :---: | :---: | :---: | :---: |
| 1 <br> Potential Sources of Runoff Pollutants | $2$ <br> Permanent Controls－Show on WQMP Drawings | $3$ <br> Permanent Controls－List in WQMP Table and Narrative | 4 <br> Operational BMPs－Include in WQMP Table and Narrative |
| A．On－site storm drain inlets | 凶 Locations of inlets． | 凶 Mark all inlets with the words ＂Only Rain Down the Storm Drain＂or similar．Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District， call 951.955 .1200 to verify． | 凶 Maintain and periodically repaint or replace inlet markings． <br> 凶 Provide stormwater pollution prevention information to new site owners，lessees，or operators． <br> 凹 See applicable operational BMPs in Fact Sheet SC－44，＂Drainage System Maintenance，＂in the CASQA Stormwater Quality Handbooks at www．cabmphandbooks．com <br> 】 Include the following in lease agreements：＂Tenant shall not allow anyone to discharge anything to storn drains or to store or deposit materials so as to create a potential discharge to storm drains．＂ |
| B．Interior floor drains and elevator shaft sump pumps |  | －State that interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer． | －Inspect and maintain drains to preven blockages and overflow． |
| C．Interior parking garages |  | State that parking garage floor drains will be plumbed to the sanitary sewer． | $\square$ Inspect and maintain drains to preven blockages and overflow． |

| IF THESE SOURCES WILL BE ON THE PROJECT SITE ．．． | ．．．THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs，AS APPLICABLE |  |  |
| :---: | :---: | :---: | :---: |
| 1 Potential Sources of Runoff Pollutants | $2$ <br> Permanent Controls－Show on WQMP Drawings | ```Permanent Controls-List in WQMP Table and Narrative``` | Operational BMPs－Include in WQMP Table and Narrative |
| D1．Need for future indoor \＆structural pest control |  | －Note building design features that discourage entry of pests． | Provide Integrated Pest Management information to owners，lessees，and operators． |
| D2．Landscape／ <br> Outdoor Pesticide Use | Show locations of native trees or areas of shrubs and ground cover to be undisturbed and retained． <br> Show self－retaining landscape areas，if any． <br> 凹 Show stormwater treatment and hydrograph modification management BMPs．（See instructions in Chapter 3，Step 5 and guidance in Chapter 5．） | State that final landscape plans will accomplish all of the following． <br> Preserve existing native trees， shrubs，and ground cover to the maximum extent possible． <br> 【 Design landscaping to minimize irrigation and runoff，to promote surface infiltration where appropriate，and to minimize the use of fertilizers and pesticides that can contribute to stormwater <br> 区 pollution． <br> Where landscaped areas are used to retain or detain stormwater，specify plants that are tolerant of saturated凹 soil conditions． <br> Consider using pest－resistant <br> 】 plants，especially adjacent to hardscape． <br> To insure successful establishment， select plants appropriate to site soils，slopes，climate，sun，wind， rain，land use，air movement， ecological consistency，and plant interactions． | 凶 Maintain landscaping using minimun or no pesticides． <br> 凹 See applicable operational BMPs in ＂What you should know for．．．．．Landscape and Gardening＂at http：／／rcflood．org／stormwater／Error！ Hyperlink reference not valid． <br> Provide IPM information to new owners，lessees and operators． |

| IF THESE SOURCES WILL BE ON THE PROJECT SITE ... | ... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE |  |  |
| :---: | :---: | :---: | :---: |
| 1 Potential Sources of Runoff Pollutants | $2$ <br> Permanent Controls-Show on WQMP Drawings | $3$ <br> Permanent Controls-List in WQMP Table and Narrative | $4$ <br> Operational BMPs-Include in WQMP Table and Narrative |
| E. Pools, spas, ponds, decorative fountains, and other water features. | Show location of water feature and a sanitary sewer cleanout in an accessible area within 10 feet. (Exception: Public pools must be plumbed according to County Department of Environmental Health Guidelines.) | If the Co-Permittee requires pools to be plumbed to the sanitary sewer, place a note on the plans and state in the narrative that this connection will be made according to local requirements. | See applicable operational BMPs in "Guidelines for Maintaining Your Swimming Pool, Jacuzzi and Garden Fountain" at http://rcflood.org/stormwater/ |
| $\square \quad$ F. Food service | - For restaurants, grocery stores, and other food service operations, show location (indoors or in a covered area outdoors) of a floor sink or other area for cleaning floor mats, containers, and equipment. <br> On the drawing, show a note that this drain will be connected to a grease interceptor before discharging to the sanitary sewer. | - Describe the location and features of the designated cleaning area. <br> Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated. | See the brochure, "The Food Service Industry Best Management Practices for: Restaurants, Grocery Stores, Delicatessens and Bakeries" at http://rcflood.org/stormwater/ <br> Provide this brochure to new site owners, lessees, and operators. |
| - G. Refuse areas | - Show where site refuse and recycled materials will be handled and stored for pickup. See local municipal requirements for sizes and other details of refuse areas. <br> If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent runon and show locations of berms to prevent runoff from the area. <br> Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer. | - State how site refuse will be handled and provide supporting detail to what is shown on plans. <br> $\square$ State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar. | State how the following will be implemented: <br> Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com |

STORMWATER POLLUTANTSOURCESISOURCECONTROLCHECKLIST

| IF THESE SOURCES WILL BE ON THE PROJECT SITE ... | ... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE |  |  |

| I. Outdoor storage of equipment or materials. (See rows J and K for source control measures for vehicle cleaning, repair, and maintenance.) | Show any outdoor storage areas, including how materials will be covered. Show how areas will be graded and bermed to prevent runon or run-off from area. <br> Storage of non-hazardous liquids shall be covered by a roof and/or drain to the sanitary sewer system, and be contained by berms, dikes, liners, or vaults. <br> Storage of hazardous materials and wastes must be in compliance with the local hazardous materials ordinance and a Hazardous Materials Management Plan for the site. | Include a detailed description of materials to be stored, storage areas, and structural features to prevent pollutants from entering storm drains. <br> Where appropriate, reference documentation of compliance with the requirements of Hazardous Materials Programs for: <br> - Hazardous Waste Generation <br> - Hazardous Materials Release Response and Inventory <br> - California Accidental Release (CalARP) <br> - Aboveground Storage Tank <br> - Uniform Fire Code Article 80 Section 103(b) \& (c) 1991 <br> - Underground Storage Tank <br> www.cchealth.org/groups/hazmat L | See the Fact Sheets SC-31, "Outdoor Liquid Container Storage" and SC-33, "Outdoor Storage of Raw Materials" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com |

| IF THESE SOURCES WILL BE ON THE PROJECT SITE ... | ... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE |  |  |
| :---: | :---: | :---: | :---: |
| 1 <br> Potential Sources of Runoff Pollutants | WQMP Drawings | 3 <br> Permanent Controls-List in WQMP <br> Table and Narrative | $4$ <br> Operational BMPs-Include in WQMP Table and Narrative |
| J. Vehicle and Equipment Cleaning | Show on drawings as appropriate: <br> (1) Commercial/industrial facilities having vehicle/equipment cleaning needs shall either provide a covered, bermed area for washing activities or discourage vehicle/equipment washing by removing hose bibs and installing signs prohibiting such uses. <br> (2) Multi-dwelling complexes shall have a paved, bermed, and covered car wash area (unless car washing is prohibited on-site and hoses are provided with an automatic shutoff to discourage such use). <br> (3) Washing areas for cars, vehicles, and equipment shall be paved, designed to prevent run-on to or runoff from the area, and plumbed to drain to the sanitary sewer. <br> (4) Commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the storm drain system. Wastewater from the facility shall discharge to the sanitary sewer, or a wastewater reclamation system shall be installed. | 凶 If a car wash area is not provided, describe any measures taken to discourage on-site car washing and explain how these will be enforced. | Describe operational measures to implement the following (if applicable): <br> 凹 Washwater from vehicle and equipment washing operations shall not be discharged to the storm drain system. Refer to "Outdoor Cleaning Activities and Professional Mobile Servic Providers" for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/ <br> Car dealerships and similar may rinse cars with water only. |

| IF THESE SOURCES WILL BE ON THE PROJECT SITE ... | ... THEN YOUR WQMP SHOULD INCLUDE THESE SOURCE CONTROL BMPs, AS APPLICABLE |  |  |
| :---: | :---: | :---: | :---: |
| 1 <br> Potential Sources of Runoff Pollutants | $2$ <br> Permanent Controls-Show on WQMP Drawings | $3$ <br> Permanent Controls-List in WQMP Table and Narrative | 4 <br> Operational BMPs-Include in WQMP Table and Narrative |
| K. Vehicle/Equipment Repair and Maintenance | Accommodate all vehicle equipment repair and maintenance indoors. Or designate an outdoor work area and design the area to prevent run-on and runoff of stormwater. <br> Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains shall not be installed within the secondary containment areas. <br> Add a note on the plans that states either (1) there are no floor drains, or (2) floor drains are connected to wastewater pretreatment systems prior to discharge to the sanitary sewer and an industrial waste discharge permit will be obtained. | State that no vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area. <br> State that there are no floor drains or if there are floor drains, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements. <br> State that there are no tanks, containers or sinks to be used for parts cleaning or rinsing or, if there are, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements. | In the Stormwater Control Plan, note that all of the following restrictions apply to use the site: <br> No person shall dispose of, nor permi 1 the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinsewater from parts cleaning into storm drains. <br> No vehicle fluid removal shall be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately. No person shall leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment. <br> Refer to "Automotive Maintenance \& Ca Care Best Management Practices for Autc Body Shops, Auto Repair Shops, Car Dealerships, Gas Stations and Fleet Service Operations". Brochure can be found at http:// rcflood.org/stormwater/ <br> Refer to Outdoor Cleaning Activities and Professional Mobile Service Providers for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/ |

| :---: | :---: | :---: | :---: |
| 1 Potential Sources of Runoff Pollutants | $2$ <br> Permanent Controls-Show on WQMP Drawings | 3 Permanent Controls-List in WQMP Table and Narrative | $4$ <br> Operational BMPs-Include in WQMP Table and Narrative |
| L. Fuel Dispensing Areas | Fueling areas ${ }^{6}$ shall have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are: a) graded at the minimum slope necessary to prevent ponding; and $b$ ) separated from the rest of the site by a grade break that prevents run-on of stormwater to the maximum extent practicable. <br> Fueling areas shall be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area ${ }^{1}$.] The canopy [or cover] shall not drain onto the fueling area. |  | The property owner shall dry sweep the fueling area routinely. <br> See the Fact Sheet SD-30, "Fueling Areas" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com |

## Appendix 9: O\&M

Operation and Maintenance Plan and Documentation of Finance, Maintenance and Recording Mechanisms
Operation \& Maintenance responsibility for Treatment Control BMP's will be outlined in the CC\&R's for the project and be enforced by the Home Owner's Association, or will be provided by an alternative method as approved by the County of Riverside. The final documents and methodology to be provided as part of the Final WQMP.

# Appendix 10: Educational Materials To be provided during final engineering 

## General Description

The bioretention best management practice (BMP) functions as a soil and plant-based filtration device that removes pollutants through a variety of physical, biological, and chemical treatment processes. These facilities normally consist of a grass buffer strip, sand bed, ponding area, organic layer or mulch layer, planting soil, and plants. The runoff's velocity is reduced by passing over or through a sand bed and is subsequently distributed evenly along a ponding area. Exfiltration of the stored water in the bioretention area planting soil into the underlying soils occurs over a period of days.

## Inspection/Maintenance Considerations

Bioretention requires frequent landscaping maintenance, including measures to ensure that the area is functioning properly, as well as maintenance of the landscaping on the practice. In many cases, bioretention areas initially require intense maintenance, but less maintenance is needed over time. In many cases, maintenance tasks can be completed by a landscaping contractor, who may already be hired at the site. In cold climates the soil may freeze, preventing runoff from infiltrating into the planting soil.

Maintenance Concerns, Objectives, and Goals

- Clogged Soil or Outlet Structures
- Invasive Species
- Vegetation/Landscape Maintenance
- Erosion
- Channelization of Flow

Aesthetics

| Inspection Activitios | Sugnested Franuency |
| :---: | :---: |
| - Inspeci soil and repair eroded areas. | Monthly |
| - Inspect for crosion or damage to vegetation, preferably at the end of the wet season to schedule summer maintenance and before najor fall runoff to be sure the strips are ready for winter. However, additional inspection after periods of heavy runoff is desirable. |  |
| Inspect to ensure grass is well established. If not, either prepare soil and reseed or replace with atternative species. Install erosion control blanket. <br> - Check for debris and litter, and areas of sediment accumulation. <br> - Inspect health of trees and shrubs. | Semi-annual inspection |
| Maintenance Activities | sursested Frequery |
| - Water plants daily for 2 weeks. | At project completion |
| - Remove litter and debris, | Monthly |
| - Remove sediment. <br> - Remuld void areas. <br> - Treat diseased trees and shrubs. <br> - Mow turf areas. <br> - Repatir erosion at inflow points. <br> - Repair outfow structures. <br> - Unclog underdrain. <br> Wegulate soil ph reguation. | As reeded |
| - Remove and replace dead and diseased vegetation. | Semi-anmal |
| - Add mulch. <br> - Repace tree stakes and wires. | Annual -... |
| Mulch should be replaced every 2 to 3 years or when bate spots appear, Remulch prior to the wet season. | Every 2-3 years, or as needed |

## Additional Information

Landscaping is critical to the function and aesthetic value of bioretention areas. It is preferable to plant the area with native vegetation, or plants that provide habitat value, where possible. Another important design feature is to select species that can withstand the hydrologic regime they will experience. At the bottom of the bioretention facility, plants that tolerate both wet and dry conditions are preferable. At the edges, which will remain primarily dry, upland species will be the most resilient. It is best to select a combination of trees, shrubs, and herbaceous materials.

### 3.5 Bioretention Facility

| Type of BMP | LID - Bioretention |
| :--- | :--- |
| Treatment Mechanisms | Infiltration, Evapotranspiration, Evaporation, Biofiltration |
| Maximum Drainage Area | This BMP is intended to be integrated into a project's landscaped area in a <br> distributed manner. Typically, contributing drainage areas to Bioretention <br> Facilities range from less than 1 acre to a maximum of around 10 acres. |
| Other Names | Rain Garden, Bioretention Cell, Bioretention Basin, Biofiltration Basin, <br> Landscaped Filter Basin, Porous Landscape Detention |

## Description

Bioretention Facilities are shallow, vegetated basins underlain by an engineered soil media. Healthy plant and biological activity in the root zone maintain and renew the macro-pore space in the soil and maximize plant uptake of pollutants and runoff. This keeps the Best Management Practice (BMP) from becoming clogged and allows more of the soil column to function as both a sponge (retaining water) and a highly effective and self-maintaining biofilter. In most cases, the bottom of a Bioretention Facility is unlined, which also provides an opportunity for infiltration to the extent the underlying onsite soil can accommodate. When the infiltration rate of the underlying soil is exceeded, fully biotreated flows are discharged via underdrains. Bioretention Facilities therefore will inherently achieve the maximum feasible level of infiltration and evapotranspiration and achieve the minimum feasible (but highly biotreated) discharge to the storm drain system.

## Siting Considerations

These facilities work best when they are designed in a relatively level area. Unlike other BMPs, Bioretention Facilities can be used in smaller landscaped spaces on the site, such as:
$\checkmark$ Parking islands
$\checkmark$ Medians
$\checkmark$ Site entrances
Landscaped areas on the site (such as may otherwise be required through minimum landscaping ordinances), can often be designed as Bioretention Facilities. This can be accomplished by:

- Depressing landscaped areas below adjacent impervious surfaces, rather than elevating those areas
- Grading the site to direct runoff from those impervious surfaces into the Bioretention Facility, rather than away from the landscaping
- Sizing and designing the depressed landscaped area as a Bioretention Facility as described in this Fact Sheet

Bioretention Facilities should however not be used downstream of areas where large amounts of sediment can clog the system. Placing a Bioretention Facility at the toe of a steep slope should also be avoided due to the potential for clogging the engineered soil media with erosion from the slope, as well as the potential for damaging the vegetation.

## Design and Sizing Criteria

The recommended cross section necessary for a Bioretention Facility includes:

- Vegetated area
- 18' minimum depth of engineered soil media
- 12 ' minimum gravel layer depth with 6 ' perforated pipes (added flow control features such as orifice plates may be required to mitigate for HCOC conditions)

While the 18 -inch minimum engineered soil media depth can be used in some cases, it is recommended to use 24 inches or a preferred 36 inches to provide an adequate root zone for the chosen plant palate. Such a design also provides for improved removal effectiveness for nutrients. The recommended ponding depth inside of a Bioretention Facility is 6 inches; measured from the flat bottom surface to the top of the water surface as shown in Figure 1.

Because this BMP is filled with an engineered soil media, pore space in the soil and gravel layer is assumed to provide storage volume. However, several considerations must be noted:

- Surcharge storage above the soil surface (6 inches) is important to assure that design flows do not bypass the BMP when runoff exceeds the soil's absorption rate.
- In cases where the Bioretention Facility contains engineered soil media deeper than 36 inches, the pore space within the engineered soil media can only be counted to the 36 inch depth.
- A maximum of 30 percent pore space can be used for the soil media whereas a maximum of 40 percent pore space can be use for the gravel layer.

## Bioretention Facility BMP Fact Sheet

## Engineered Soil Media Requirements

The engineered soil media shall be comprised of 85 percent mineral component and 15 percent organic component, by volume, drum mixed prior to placement. The mineral component shall be a Class A sandy loam topsoil that meets the range specified in Table 1 below. The organic component shall be nitrogen stabilized compost ${ }^{1}$, such that nitrogen does not leach from the media.

Table 1: Mineral Component Range Requirements

| Percent Range | Component |
| :---: | :---: |
| $\mathbf{7 0 - 8 0}$ | Sand |
| $\mathbf{1 5 - 2 0}$ | Silt |
| $\mathbf{5 - 1 0}$ | Clay |

The trip ticket, or certificate of compliance, shall be made available to the inspector to prove the engineered mix meets this specification.

## Vegetation Requirements

Vegetative cover is important to minimize erosion and ensure that treatment occurs in the Bioretention Facility. The area should be designed for at least 70 percent mature coverage throughout the Bioretention Facility. To prevent the BMP from being used as walkways, Bioretention Facilities shall be planted with a combination of small trees, densely planted shrubs, and natural grasses. Grasses shall be native or ornamental; preferably ones that do not need to be mowed. The application of fertilizers and pesticides should be minimal. To maintain oxygen levels for the vegetation and promote biodegradation, it is important that vegetation not be completely submerged for any extended period of time. Therefore, a maximum of 6 inches of ponded water shall be used in the design to ensure that plants within the Bioretention Facility remain healthy.

A 2 to 3-inch layer of standard shredded aged hardwood mulch shall be placed as the top layer inside the Bioretention Facility. The 6 -inch ponding depth shown in Figure 1 above shall be measured from the top surface of the 2 to 3-inch mulch layer.

## Curb Cuts

To allow water to flow into the Bioretention Facility, 1-foot-wide (minimum) curb cuts should be placed approximately every 10 feet around the perimeter of the Bioretention Facility. Figure 2 shows a curb cut in a Bioretention Facility. Curb cut flow lines must be at or above the $\mathrm{V}_{\text {BMP }}$ water surface level.

[^12]
## Bioretention Facility BMP Fact Sheet

Figure 2: Curb Cut located in a Bioretention Facility
To reduce erosion, a gravel pad shall be placed at each inlet point to the Bioretention Facility. The gravel should be 1- to 1.5 -inch diameter in size. The gravel should overlap the curb cut opening a minimum of 6 inches. The gravel pad inside the Bioretention Facility should be flush with the finished surface at the curb cut and extend to the bottom of the slope.

In addition, place an apron of stone or concrete, a foot square or larger, inside each inlet to prevent vegetation from growing up and blocking the inlet. See Figure 3.

Figure 3: Apron located in a Bioretention Facility

## Terracing the Landscaped Filter Basin

It is recommended that Bioretention Facilities be level. In the event the facility site slopes and lacks proper design, water would fill the lowest point of the BMP and then discharge from the basin without being treated. To ensure that the water will be held within the Bioretention Facility on sloped sites, the BMP must be terraced with nonporous check dams to provide the required storage and treatment capacity.
The terraced version of this BMP shall be used on non-flat sites with no more than a 3 percent slope. The surcharge depth cannot exceed 0.5 feet, and side slopes shall not exceed 4:1. Table 2 below shows the spacing of the check dams, and slopes shall be rounded up (i.e., 2.5 percent slope shall use 10' spacing for check dams).

Table 2: Check Dam Spacing

| $\mathbf{6}^{\prime \prime}$ Check Dam Spacing |  |
| :---: | :---: |
| Slope | Spacing |
| $\mathbf{1 \%}$ | $25^{\prime}$ |
| $\mathbf{2 \%}$ | $15^{\prime}$ |
| $\mathbf{3 \%}$ | $10^{\prime}$ |

## Bioretention Facility BMP Fact Sheet

## Roof Runoff

Roof downspouts may be directed towards Bioretention Facilities. However, the downspouts must discharge onto a concrete splash block to protect the Bioretention Facility from erosion.

## Retaining Walls

It is recommended that Retaining Wall Type 1A, per Caltrans Standard B3-3 or equivalent, be constructed around the entire perimeter of the Bioretention Facility. This practice will protect the sides of the Bioretention Facility from collapsing during construction and maintenance or from high service loads adjacent to the BMP. Where such service loads would not exist adjacent to the BMP, an engineered alternative may be used if signed by a licensed civil engineer.

## Side Slope Requirements

## Bioretention Facilities Requiring Side Slopes

The design should assure that the Bioretention Facility does not present a tripping hazard. Bioretention Facilities proposed near pedestrian areas, such as areas parallel to parking spaces or along a walkway, must have a gentle slope to the bottom of the facility. Side slopes inside of a Bioretention Facility shall be 4:1. A typical cross section for the Bioretention Facility is shown in Figure 1.

## Bioretention Facilities Not Requiring Side Slopes

Where cars park perpendicular to the Bioretention Facility, side slopes are not required. A 6inch maximum drop may be used, and the Bioretention Facility must be planted with trees and shrubs to prevent pedestrian access. In this case, a curb is not placed around the Bioretention Facility,
but wheel stops shall be used to prevent vehicles from entering the Bioretention Facility, as shown in Figure 4.

## Bioretention Facility BMP Fact Sheet

## Planter Boxes

Bioretention Facilities can also be placed above ground as planter boxes. Planter boxes must have a minimum width of 2 feet, a maximum surcharge depth of 6 inches, and no side slopes are necessary. Planter boxes must be constructed so as to ensure that the top surface of the engineered soil media will remain level. This option may be constructed of concrete, brick, stone or other stable materials that will not warp or bend. Chemically treated wood or galvanized steel, which has the ability to contaminate stormwater, should not be used. Planter boxes must be lined with an impermeable liner on all sides, including the bottom. Due to the impermeable liner, the inside bottom of the planter box shall be designed and constructed with a cross fall, directing treated flows within the subdrain layer toward the point where subdrain exits the planter box, and subdrains shall be oriented with drain holes oriented down. These provisions will help avoid excessive stagnant water within the gravel underdrain layer. Similar to the in-ground Bioretention Facility versions, this BMP benefits from healthy plants and biological activity in the root zone. Planter boxes should be planted with appropriately selected vegetation.

Figure 5: Planter Box
Source: LA Team Effort

## Overflow

An overflow route is needed in the Bioretention Facility design to bypass stored runoff from storm events larger than $\mathrm{V}_{\text {BMP }}$ or in the event of facility or subdrain clogging. Overflow systems must connect to an acceptable discharge point, such as a downstream conveyance system as shown in Figure 1 and Figure 4. The inlet to the overflow structure shall be elevated inside the Bioretention Facility to be flush with the ponding surface for the design capture volume ( $\mathrm{V}_{\text {BMP }}$ ) as shown in Figure 4. This will allow the design capture volume to be fully treated by the Bioretention Facility, and for larger events to safely be conveyed to downstream systems. The overflow inlet shall not be located in the entrance of a Bioretention Facility, as shown in Figure 6.

## Bioretention Facility BMP Fact Sheet

## Underdrain Gravel and Pipes

An underdrain gravel layer and pipes shall be provided in accordance with Appendix BUnderdrains.

Figure 6: Incorrect Placement of an Overflow Inlet.

## Inspection and Maintenance Schedule

The Bioretention Facility area shall be inspected for erosion, dead vegetation, soggy soils, or standing water. The use of fertilizers and pesticides on the plants inside the Bioretention Facility should be minimized.

## Bioretention Facility Design Procedure

1) Enter the area tributary, $A_{T}$, to the Bioretention Facility.
2) Enter the Design Volume, $V_{\text {BMP }}$, determined from Section 2.1 of this Handbook.
3) Select the type of design used. There are two types of Bioretention Facility designs: the standard design used for most project sites that include side slopes, and the modified design used when the BMP is located perpendicular to the parking spaces or with planter boxes that do not use side slopes.
4) Enter the depth of the engineered soil media, $d_{s}$. The minimum depth for the engineered soil media can be 18 ' in limited cases, but it is recommended to use 24 ' or a preferred 36 ' to provide an adequate root zone for the chosen plant palette. Engineered soil media deeper than 36 ' will only get credit for the pore space in the first 36 '.
5) Enter the top width of the Bioretention Facility.
6) Calculate the total effective depth, $d_{E}$, within the Bioretention Facility. The maximum allowable pore space of the soil media is $30 \%$ while the maximum allowable pore space for the gravel layer is $40 \%$. Gravel layer deeper than 12 will only get credit for the pore space in the first 12'.

a. For the design with side slopes the following equation shall be used to determine the total effective depth. Where, $\mathrm{d}_{\mathrm{p}}$ is the depth of ponding within the basin.
$\mathrm{d}_{\mathrm{E}}(\mathrm{ft})=\frac{0.3 \times\left[\left(\mathrm{w}_{\mathrm{T}}(\mathrm{ft}) \times \mathrm{d}_{\mathrm{S}}(\mathrm{ft})\right)+4\left(\mathrm{~d}_{\mathrm{P}}(\mathrm{ft})\right)^{2}\right]+0.4 \times 1(\mathrm{ft})+\mathrm{d}_{\mathrm{P}}(\mathrm{ft})\left[4 \mathrm{~d}_{\mathrm{P}}(\mathrm{ft})+\left(\mathrm{w}_{\mathrm{T}}(\mathrm{ft})-8 \mathrm{~d}_{\mathrm{P}}(\mathrm{ft})\right)\right]}{\mathrm{w}_{\mathrm{T}}(\mathrm{ft})}$
This above equation can be simplified if the maximum ponding depth of $0.5^{\prime}$ is used. The equation below is used on the worksheet to find the minimum area required for the Bioretention Facility:

$$
\mathrm{d}_{\mathrm{E}}(\mathrm{ft})=\left(0.3 \times \mathrm{d}_{\mathrm{S}}(\mathrm{ft})+0.4 \times 1(\mathrm{ft})\right)-\left(\frac{0.7\left(\mathrm{ft}^{2}\right)}{\mathrm{w}_{\mathrm{T}}(\mathrm{ft})}\right)+0.5(\mathrm{ft})
$$

b. For the design without side slopes the following equation shall be used to determine the total effective depth:

$$
\mathrm{d}_{\mathrm{E}}(\mathrm{ft})=\mathrm{d}_{\mathrm{P}}(\mathrm{ft})+\left[(0.3) \times \mathrm{d}_{\mathrm{S}}(\mathrm{ft})+(0.4) \times 1(\mathrm{ft})\right]
$$

The equation below, using the maximum ponding depth of $0.5^{\prime}$, is used on the worksheet to find the minimum area required for the Bioretention Facility:

$$
\mathrm{d}_{\mathrm{E}}(\mathrm{ft})=0.5(\mathrm{ft})+\left[(0.3) \times \mathrm{d}_{\mathrm{S}}(\mathrm{ft})+(0.4) \times 1(\mathrm{ft})\right]
$$

7) Calculate the minimum surface area, $A_{M}$, required for the Bioretention Facility. This does not include the curb surrounding the Bioretention Facility or side slopes.

$$
\mathrm{A}_{\mathrm{M}}\left(\mathrm{ft}^{2}\right)=\frac{\mathrm{V}_{\mathrm{BMP}}\left(\mathrm{ft}^{3}\right)}{\mathrm{d}_{\mathrm{E}}(\mathrm{ft})}
$$

8) Enter the proposed surface area. This area shall not be less than the minimum required surface area.
9) Verify that side slopes are no steeper than $4: 1$ in the standard design, and are not required in the modified design.
10) Provide the diameter, minimum 6 inches, of the perforated underdrain used in the Bioretention Facility. See Appendix B for specific information regarding perforated pipes.
11) Provide the slope of the site around the Bioretention Facility, if used. The maximum slope is 3 percent for a standard design.
12) Provide the check dam spacing, if the site around the Bioretention Facility is sloped.
13) Describe the vegetation used within the Bioretention Facility.

### 1.0 PURPOSE

The purpose of this Planned Unit Development (PUD) is to describe the overall design concept for the Gateway Heights project and outline the design details that will be incorporated into the final design decisions. The Gateway Heights project presents innovative housing options within the City of Moreno Valley, while delivering a vast amount of recreational open space to the surrounding communities. This manual includes both design standards and guidelines. The guidelines in this document will lay out both functional and aesthetic design concepts as an overall strategy to be followed at the time of development. The primary objective is to establish a consistent theme throughout the project. This document will establish design standards, overall theme, wall and fence concepts, and pedestrian connectivity to be used in the future build out of this project. This Planned Unit Development (PUD) is being processed in conformance with City of Moreno Valley Municipal Code, Chapter 9.03.060.

### 2.0 PROJECT BACKGROUND \& DESCRIPTION

Gateway Heights is located north of Jennings Court and east of Morton Road in the City of Moreno Valley (Refer to Exhibit A - Vicinity Map). The property contains 32.70 acres in the foothill of the Box Springs Mountain Reserve Park. The project proposes to develop approx. 16.59 acres of 32.56 acres into 108 detached condominium units with the dwelling units in an 8-unit "cluster" concept. (See Exhibit B Development Area) The remaining 15.97 acres will be rezoned to Open Space (OS). It is anticipated that the open space area will be incorporated into the local trail system of hiking, trail running, and mountain biking trails, and the open space area will be available for recreational use by residents of Gateway Heights and the City of Moreno Valley. The project will also contain 3.1 acres of open space, trails and park area within the community providing residents with space to enjoy. The project proposal is consistent with the City of Moreno Valley's Residential 10 (R10) District which allows for a maximum density of 10 dwelling units per net acre. In order to ensure the quality and cohesiveness of PUD projects, the City of Moreno Valley requires additional design details during planning stages. The requirement for these design standards and details helps ensure that City design objectives are met. By implementing the following design points, this project meets these City design objectives for PUDs:

- Provides innovation and diversity in housing choices that would not otherwise be possible according to the strict application of the site development regulations in this title because the

### 3.0 EXISTING CONDITIONS

The property is currently unimproved land bordered to the south by an existing single family residential development. The site lies just to the east of Interstate 215 and to the north of the US 60/I-215 interchange. The site had previously been entitled for a single-family residential development (Tract 33626) in 2007 but those entitlements expired.

The topography of this site has two naturally defined areas. The lower lying area, which generally contains slopes under $15 \%$ and the mountainous area which consists of slopes greater than $25 \%$. The site generally slopes from northeast to southwest (See Exhibit C - USGS Topographic Map). The property is located within Flood Zone ' $X$ ' (areas determined to be outside of the 100-year and 500-year floodplain) Refer to Exhibit D - FIRM Map (Map No. 06065C0733G, dated August 28, 2008).

Per the General Plan, the property currently has land use designations of Residential Max 2DU/AC (R2) and Hillside Residential (HR). (Refer to Exhibit E-General Plan Map and Exhibit F - Zoning Map)

Transportation corridors and area circulation will be developed in conformance with the City of Moreno Valley's General Plan. Refer to Exhibit G - Area Circulation Map for a representation of the major roadways in the areas of the subject site.

### 4.0 RELATIONSHIP TO SURROUNDING PROPERTIES

The surrounding properties in the area include vacant land, existing single-family homes, and hillside. A majority of the vacant land adjacent to this project are contained within the Gateway Center Specific Plan, in the unincorporated area of Riverside County, to the west of the project. This Specific Plan contains densities from 5 du /acre to 16 du /acre as well as a school site bordering Morton Road to the west. (See Exhibit H - Gateway Specific Plan) To the north and east are areas zoned as Hillside Residential in the City of Moreno Valley and Conservation in the County of Riverside, to the east and south of the project there are eight existing single-family homes. (See Exhibit I - Surrounding Jurisdictions)

The surrounding General Plan land use designations are as follows:
North: Hillside Residential (HR) \& Conservation (County of Riverside)
South: Residential Max. 5du/acre (R5)
East: Hillside Residential (HR)
West: Gateway Center Specific Plan (County of Riverside)

The surrounding existing land uses are as follows:
North: Vacant
South: Single Family Residences
East: Vacant
West: Vacant

### 5.0 PRELIMINARY DEVELOPMENT PLAN

The Gateway Heights development is intended as a planned residential community offering innovative cluster housing options in the lower lying portion of the site and open space on the remainder of the site. The development will include a community park, open space and a common community design identity. This development plan coupled with the unique location of this property will provide multiple housing alternatives for both entry-level buyers, young families, and retirees, as well as student and faculty for the University of California-Riverside.

As mentioned above, the R10 designated area of Gateway Heights will total 16.59 acres of the 32.56 acre property and will contain 108 units, with a density of 6.51 units per acre. This density is well within allowances of the proposed General Plan designation of R10 (10 units per net acre). The remaining 15.97 acres will be changed to Open Space (OS) and designated for conservation. In addition to the open space, the project will also provide a 0.89 acre community park located in the center of the development. (Refer to Exhibit J - Open Space/Park Plan)

The residential uses within the Gateway Heights development will consist of cluster units in varying sizes ranging from 4 -unit to 10 -unit clusters. This development will be subject to the requirements in Chapter 9.03.040 (Residential Site Development Standards) and 9.03.060 (Planned Unit Developments) of the City of Moreno Valley's municipal code.

### 5.1 Cluster Design

These units will contain 4-unit to 10 -unit auto court product on pad sizes ranging from 7,674SF to 16,254 SF. (Refer to Exhibit K - Cluster Detail) These cluster units are arranged with garages facing a common driveway as to enhance the aesthetic views of the project from the street and perimeter. The purpose of this design concept is to ensure architectural continuity and compatibility throughout the project utilizing the following design criteria:
> Provide front door access to open space/courtyard for inside units and street access for outside units.
$>$ Provide garage access at common private street
> Use enhanced elevations for homes facing the public street.
> Provide patios or balconies to enhance architectural styles and increase private open space.
> Consider additional building articulation through recessed garage doors, recessing or cantilevering second stories and varying roof pitches.

## (Refer to A-1.3 thru A-3.4 - Conceptual Floor Plans/Elevations)

### 5.2 Alternative Design Standards

This planned unit development for the Gateway Heights project contains various design alternatives that differ from the standard R10 design standards in order to promote the objectives stated above in Section 2. As allowed in the City of Moreno Valley's Municipal Code Section 9.03.060.G, planned unit developments may deviate from the site development standards set forth in the applicable zoning district regarding lot area, lot dimensions, lot coverage, setbacks and building height.

### 5.2.1 Lot Coverage

The Gateway Heights project contains 13 development pad areas varying in size from 7,674 to 16,254 square feet. The cluster development will be exclusively contained within these development pads and the pads will have a maximum building coverage of $65 \%$. The remaining pad area shall contain driveways, sidewalks and landscaping.

### 5.2.2 Building Setbacks

Front/Street Side setback = 5' to ROW
Minimum building separation $=6^{\prime}$
Side setback to toe/top of slope $=5^{\prime}$ Min*
Rear setback to toe/top of slope $=5^{\prime} \mathrm{Min} *$
*-For buildings located at the top or toe of slope, the minimum building setback shall be determined by the California Building Code Section 1808.7 which states that buildings at the toe of slope shall be at least the smaller of $\mathrm{H} / 2$ or $15^{\prime}$ from the toe of slope. Buildings at the top of slope shall be at least the smaller of $\mathrm{H} / 3$ or $40^{\prime}$ from the top of slope.

Example: 20' Slope Height = 10' setback at toe of slope (20/2)
$20^{\prime}$ Slope Height $=7$ ' setback at top of slope (20/3)

For SI: I foot = 304.8 mm.

FOUNDATION CLEARANCES FROM SLOPES

### 5.2.3 Building Height

Building heights for the two story units will not exceed $30^{\prime}$ in height.

### 5.2.4 Street Sections

The streets within the Gateway Heights PUD will be private streets maintained by the project's Homeowner Association. These streets will be constructed based on the City of Moreno Valley's Local Street section MVSI-107A-0. Street A and Street C will be constructed using a modified section which eliminates the sidewalk and landscape area along the project perimeter. The purpose for these modified sections is to preserve the natural landscape along the perimeter of the project. With the elimination of these sidewalks, a pedestrian crossing has been located at approximately mid-block of Street B to provide ADA access to the units on the north side of Street B. (Refer to Exhibit L Street Section Details)

### 5.3 Fire Protection Plan

The Gateway Heights project has developed a Fire Protection Plan in conjunction with the development to increase safety measures and mitigate any fire hazards for the project. The mitigations include providing two $36^{\prime}+$ wide roadways at the entrance to minimize any potential traffic congestion during an emergency setting. One roadway would be used for ingress and the other for egress. The site also includes an internal looped road system allowing traffic circulation in either direction. Direct access shall be provided to all structures and no dead-end fire apparatus access roads are contained onsite. The project has also developed a Fuel Modification and Vegetation Management plan for the site which includes requirements for landscape materials to reduce non-fire-resistant vegetation.

### 5.4 Community Park \& Landscape Buffers

This project will contain a community park space area, approximately 0.89 acres in size and with various elements for recreation. This community park will be located near the center to the subdivision allowing easy access to all residents and turf areas for additional gathering and activities. The park will be owned and maintained by the project's Homeowners Association. In addition to the community park, this project will also incorporate landscaped buffer areas throughout the project and along the project's perimeter. These landscape areas will also be maintained by the Homeowners Association.

### 5.4.1 General Guidelines

> All landscape shall conform to Ordinance No. 859.2 and County of Riverside Guide to California Friendly Landscaping.
> All planting areas shall be irrigated with an automatic irrigation system and an ET based controller, per Ordinance 859.2.
> All planting areas shall receive three inches ( $3^{\prime \prime}$ ) of shredded bark mulch and one and a half inches ( $1-1 / 2^{\prime \prime}$ ) on ground cover from flats.
$>$ All trees within six feet ( $6^{\prime}$ ) of any hardscape shall receive thirty-six inch ( $36^{\prime \prime}$ ) deep, by twenty inch ( $20^{\prime \prime}$ ) long linear root barrier.
> All slopes three feet ( $3^{\prime}$ ) in vertical height or greater shall be planted with shrubs and trees and irrigated per the Riverside County requirements for slope erosion control landscaping. Slopes to meet building and safety requirements.
> Landscaping shall consist of a combination of trees, shrubs and groundcover as listed in the California Friendly Plant List provided by the County.

### 5.5 Entry Monuments, Walls \& Project Theme

The primary entry for the community will be located at the intersection of "Street A" and Morton Road. The elevated topography of the Gateway Heights project will make it a predominant development near the l-215 freeway. As such, it is important to minimize the walls and fences that could impact the views from the street or surrounding areas. The Gateway Heights project will contain no walls on the interior of the project. The perimeter of the project will consist of decorative view walls and/ or tubular steel fencing. Perimeter wall and fence materials, designs, and colors will carry on the project's theme established by the project's monument signage and landscaping. Wall and fence heights will be limited to a maximum height of six (6) feet, except where necessary for noise attenuation or additional retaining wall. Decorative pillars and pedestals may extend up to an additional fourteen (14) inches above the maximum wall or fence heights. (Refer to Exhibit M - Conceptual Wall \& Fence Plan) Materials, colors, and construction methods for theme, view and accent walls are subject to some variation, so long as the proposed character and theme of the walls is preserved and per the approval of the Planning Department.

While in some areas of the development, units may have retaining walls the majority of the development will not be separated by neighborhood walls at the rear or side yards.

### 5.5.1 General Guidelines

- All walls and fences should maintain a six foot ( $6^{\prime}$ ) maximum height limit, except where larger walls are necessary for noise attenuation or retaining purposes.
> If walls or fences end in a pilaster, the design of the pilaster should reflect the shape of the supports used in the entry monuments and use similar materials.
> When changes in pad elevation occur, the wall or fence should be stepped in equal vertical intervals.
> Where gates are required, they shall be constructed of wrought iron, vinyl or tubular steel. Chain link fencing is not permitted. All construction must be of good quality and sufficient durability. (Applicants shall provide specifications which shall be approved by the Planning Department)
> All wall and fence plans and materials must conform to City of Moreno Valley guidelines.

### 5.6 Perimeter Yard Landscaping

Perimeter yard landscaping is required around all cluster pads and unless approved by the Planning Department, will be provided by the developer/home builder. Perimeter yard landscaping provided by the developer/builder or their representative must be installed within one month of closing of the first unit. A variety of perimeter yard landscape packages with automatic irrigation systems shall be provided; landscaping designs with berming, river run features, courtyards, lighting, or other creative features shall be offered for standard landscape design.

### 5.7 Private Open Space

Private Open Space may include land within each residential unit that is available for private use. This private open space is typically considered yard, patio or balcony area that is available for private recreation. It is recognized that while the community park provides an easily accessible active recreational opportunity for all residents of the development, each residence must have adequate private outdoor space that can be an effective extension of the indoor living space and be used for passive outdoor activities such as gardening, reading, eating and barbequing. Per Moreno Valley Municipal Code Section 9.03.040.G.8, each unit shall have at least one

Figure 1 - Galvanized steel rock garden wall hundred and fifty (150) square feet of private open space. This open space may be achieved through the use of patio or balcony spaces. First floor patio space shall have a minimum dimension of $8^{\prime}$ and upstairs balconies must have a minimum dimension of $5^{\prime}$. Patio designs may include alternatives to traditional fencing, such as garden walls, small retaining walls or landscaping which delineates the space between units.

### 6.0 ARCHITECTURE

The architectural guidelines in this manual have been developed to ensure architectural continuity and compatibility throughout the project; to promote a distinctive architectural theme; and to avoid a mundane repetition of too similar architectural design elements. These guidelines will provide a set of basic concepts for development but are not meant to limit future creativity in design.

These styles and concepts should be incorporated to provide a variety of quality housing types.

### 6.1 General Guidelines

The following general guidelines should be considered in the designing and layout of the project:
> A common set of design style and design elements should be included throughout the project.
> Long unarticulated building facades should be avoided
> Natural building materials should be varied throughout the project, avoiding long stretches of similar street scene
> Offset roof planes, columns, vertical and horizontal articulation or other projecting architectural features shall occur on those facades of the residence that are visible from the street or open space
> The visual impact of garages shall be reduced to the maximum extent practicable

### 6.2 Architectural styles

Two architectural styles have been set forth as examples in this document to begin to identify and illustrate the intent and objective of these design guidelines in terms of architectural style and variety. Santa Barbara and Modern Farmhouse architectural styles are discussed in the following pages and depicted in Figures $\mathbf{1} \& 2$ to establish the types and level of architectural detail which will assist in achieving the project design objectives. Discussions of each of these styles as well as illustrations of typical elevations and features are located on the following pages.

### 6.2.1 Santa Barbara

Santa Barbara style is an architectural and interior design style derived from Mediterranean and Spanish-revival architecture, often characterized by deep red tones and polished wood textures that contrast with stark white walls.
Santa Barbara style architecture and interior design are characterized by white stucco walls, exposed beam ceilings, red-tile roofs and floors, arcades, and courtyards.

Figure 1 - Santa Barbara

Features typical of the Santa Barbara style include:

- White stucco walls
- Exposed beam ceilings
- Tile roofs
- Shutters
- Decorative Vents

### 6.2.2 Modern Farmhouse

The Modern farmhouse style combines practical elements (simple floor plan, white walls) with rustic materials (wood floors, hand-hewn beams, and wrought-iron hardware). And you'll see this style throughout the U.S., with regional variations. For example, you might spot a Dutch door or two in a New England farmhouse, or wraparound porches on homes in the Deep South

Features typical of the Modern Farmhouse style include:

- Reclaimed wood
- Barnboard details
- Wrought iron accents
- Wide plank floors
- Rafter Tails
- Stone Veneers

Figure 2 - Modern Farmhouse

### 7.0 UTILITIES

Currently the site is undeveloped and the site does contain some existing overhead electrical lines as well as water and sewer lines located in Morton Rd. All existing and new onsite utilities that will serve the subject site will be placed underground except as approved by Public Works. Operation and maintenance of all utilities and facilities will be managed by the appropriate operating entity upon approval and completion of construction. Sewer facilities, water facilities, streetlights, and fire hydrants will be provided according to the appropriate agency's guidelines, per the recommendations of Public Works and City of Moreno Valley Fire Departments and other governmental regulations applicable to the construction of various facilities.

### 8.0 COVENANTS, CONDITIONS AND RESTRICTIONS (CC\&R’S)

Table 8-1 below details the maintenance responsibilities for the various utilities and common areas within Gateway Heights. A majority of the common areas will be maintained by a Home Owners Association (HOA). The HOA will be established in conjunction with development of the project. CC\&R's for Gateway Heights that include language for the establishment of a HOA and provisions for creation of liens in conjunction with the HOA, for maintenance funding, will be provided prior to recordation of the final map.

| MAINTENANCE RESPONSIBILITY <br> Table 8-1 |  |  |  |  |  |

### 1.0 INTRODUCTION

This report presents the methodology, findings and conclusions of the traffic impact analysis (TIA) prepared for the proposed Gateway Highlands Residential development project. The proposed project site is located on the eastside of Morton Road and north of Jennings Court, in the City of Moreno Valley (City). The project proposes the construction of 108 detached condominiums.

### 1.1 Purpose of the Traffic Study and Study Objectives

This report is intended to satisfy the requirements for a TIA established by the City of Moreno Valley Transportation Impact Analysis Preparation Guide for Vehicles Miles Traveled and Level of Service Assessment, (June 2020), as well as the requirements for the disclosure of potential impacts and mitigation measures per the California Environmental Quality Act (CEQA). The study area, analysis scenarios, and analysis methodologies are based on discussion with City staff and included in the approved Scoping Agreement. Appendix A includes the approved Scoping Agreement.

### 1.2 Project Location \& Study Area

The project is located on the eastside of Morton Road and north of Jennings Court. The project proposes includes 108 detached condominiums. Figure 1 shows the regional location of the project. The project opening year is 2023.

Consistent with City Guidelines, this report analyzes intersections of "Collector" or higher classification, at which the project will add 50 or more peak hour trips. The following six intersections were evaluated for traffic operations:
Study Intersections

1. Sycamore Canyon Road and Fair Isle Drive (Riverside);
2. I-215 Northbound Ramps and Fair Isle Drive-Box Springs Road (Moreno Valley);
3. Morton Road and Project Driveway (Moreno Valley);
4. Morton Road and Woodsworth North (Moreno Valley);
5. Morton Road and Woodsworth South (Moreno Valley); and
6. Morton Road and Box Springs Road (Moreno Valley).

The study area intersections are shown in Figure 2.
This report analyzes weekday a.m. and p.m. peak hour conditions. The a.m. peak hour is defined as the one hour of highest traffic volumes occurring between 7:00 a.m. and 9:00 a.m. The p.m. peak hour is defined as the one hour of highest traffic volumes occurring between 4:00 and 6:00 p.m.

### 1.3 Analysis Scenarios

Based on the City of Moreno Valley Guidelines, this report analyzes traffic conditions for the following scenarios:

1. Existing Conditions;
2. Project Completion Without Project Conditions; and
3. Project Completion With Project Conditions.

Consistent with the CMP, this report analyzes weekday daily, a.m., and p.m. peak hour conditions. The a.m. peak hour is defined as the one hour of highest traffic volumes occurring between 7:00 a.m. and 9:00 a.m. The p.m. peak hour is defined as the one hour of highest traffic volumes occurring between 4:00 and 6:00 p.m.

### 2.0 PROJECT DESCRIPTION

The project proposes the construction of 108 detached condos. Access to the project will be provided by one fullaccess driveway on Morton Road. The site plan for the proposed project is illustrated in Figure 3.

FIGURE 3

Gateway Highlands
Site Plan

### 2.1 Project Trip Generation

The project includes 108 detached condominiums, however, to provide a conservative estimate of the trips generated by the project, the trip generation is based on rates from the Institute of Transportation Engineers' (ITE) Trip Generation ( $10^{\text {th }}$ Edition) for Land Use 210 - "Single-Family Detached Housing". Table A shows the project trip generation for the a.m. peak hour, p.m. peak hour, and weekday. As shown in Table A, the project is forecast to generate 80 trips in the a.m. peak hour, 107 trips in the p.m. peak hour, and 1,020 daily trips.

### 2.2 Project Trip Distribution \& Assignment

Trip distribution patterns for the proposed project were developed based on discussion with City staff and the location of local and regional destinations. It should be noted that Morton Road to the north of project has been closed off to through traffic since the opening of the Moreno Valley/March Field Station Metrolink, therefore, the project trips were routed to the south on Morton Road and distributed to Box Springs Road. Figure 4 illustrates the trip distribution for project trips at the study area intersections. The project trip generation was applied to the trip distribution patterns for the project to develop trip assignments for new project trips. Figure 5 illustrates the project trip assignment at the study intersections.

### 3.0 LOS DEFINITIONS, PROCEDURES, AND THRESHOLDS

Level of service (LOS) is a measure of the quality of operational conditions within a traffic stream, and is generally expressed in terms of such measures as speed and travel time, freedom to maneuver, traffic interruptions, and comfort and convenience. Levels range from A to F , with LOS A representing excellent (free-flow) conditions and LOS F representing extreme congestion. Consistent with City guidelines, the Highway Capacity Manual (HCM) procedures have been used to evaluate levels of service. This section discusses the LOS definitions, procedures, and thresholds used in this report.

### 3.1 Intersection Levels of Service

The analysis of traffic operations at intersections was conducted according to the Highway Capacity Manual 6it Edition (HCM) delay methodologies using Synchro 11 software, which is described in the Highway Capacity Manual (Transportation Research Board, Washington, D.C., November 2016). Under the HCM methodology, LOS for signalized intersections is based on the average delay experienced by vehicles traveling through an intersection, whereas for un-signalized intersections, the LOS is based on the worst approach where the minor leg has a shared lane and on the worst movement where the minor leg has dedicated turn lanes. Table B presents a brief description of each level of service letter grade, as well as the range of delays associated with each grade.

### 3.2 Levels of Service Standards

The City of Moreno Valley General Plan has established minimum Level of Service standards for its roadway network. LOS D is applicable to intersections that are adjacent to freeway on/off ramps and adjacent to employment generating lands uses. LOS C is applicable to all other intersections. For boundary intersections, LOS D is assumed to be acceptable. Further, the City of Moreno Valley identifies the following signalized intersection operating requirements:

- Any signalized study intersection operating at acceptable LOS without project traffic in which the addition of project traffic causes the intersection to degrade to unacceptable LOS shall identify improvements to provide acceptable LOS.
- Any signalized study intersection that is operating at unacceptable LOS without project traffic where the project increases delay by 5.0 or more seconds shall identify improvements to offset the increase in delay.

## translutions

## Gateway Highlands <br> Project Trip Assignment

Table B: Level of Service Criteria

| LOS | Description of Drivers' Perception and Traffic Operation |  |  |  | HCM (Delay in Seconds) |
| :---: | :--- | :--- | :--- | :---: | :---: |
|  |  | Unsignalized <br> A | This level is typically assigned when the volume-to-capacity ratio is low and either progression is <br> exceptionally favorable or the cycle length is very short. If it is due to favorable progression, most <br> vehicles arrive during the green indication and travel through the intersection without stopping. |  |  |
| B | This level is assigned when the volume-to-capacity ratio is low and either progression is highly favorable <br> or the cycle length is short. More vehicles stop than with LOS A. | $>10$ and $\leq 15$ | $>10$ and $\leq 20$ |  |  |
|  | This level is typically assigned when progression is favorable or the cycle length is moderate. Individual <br> cycle failures (i.e., one or more queued vehicles are not able to depart as a result of insufficient capacity <br> during the cycle) may begin to appear at this level. The number of vehicles stopping is significant, <br> although many vehicles still pass through the intersection without stopping. | $>15$ and $\leq 25$ | $>20$ and $\leq 35$ |  |  |
| D | This level is typically assigned when the volume-to-capacity ratio is high and either progression is <br> ineffective or the cycle length is long. Many vehicles stop and individual cycle failures are noticeable. | $>25$ and $\leq 35$ | $>35$ and $\leq 55$ |  |  |
| E | This level is typically assigned when the volume-to-capacity ratio is high, progression is unfavorable, and <br> the cycle length is long. Individual cycle failures are frequent. | $>35$ and $\leq 50$ | $>55$ and $\leq 80$ |  |  |
| F | This level is typically assigned when the volume-to-capacity ratio is very high, progression is very poor, <br> and the cycle length is long. Most cycles fail to clear the queue. | $>50$ | $>80$ |  |  |

[^14]For unsignalized intersections, the following criteria shall be used when identifying operational deficiencies. An operation improvement would be required if the study determines that either section a) or both sections b) and c) occur:
a) The addition of project traffic causes the intersection to degrade from an acceptable LOS to unacceptable LOS.

OR
b) The project adds 5.0 seconds or more of delay to an intersection that is already projected to operate without project at an acceptable LOS.
AND
C) The intersection meets the peak hour traffic signal warrant after the addition of project traffic.

The City of Riverside General Plan considers LOS D to be maintained at intersections of Collector or higher classification. Further, for projects that propose uses above that contained in the General Plan, operational improvements are required when the addition of project traffic causes either peak hour LOS to degrade from acceptable LOS (A through D) to unacceptable LOS (LOS E or F) or the peak hour delay to increase as follows:

- LOS A/B: By 10 seconds;
- LOS C: By 8 seconds;
- LOS D: By 5 seconds;
- LOS E: By 2 seconds;
- LOS F: By 1 second.

### 4.0 VOLUME DEVELOPMENT METHODOLOGY

Forecast traffic volumes at study intersections were developed consistent with the City's guidelines. This section discusses the volume development methodology used to forecast future traffic volumes.

### 4.1 Existing Without Project Traffic Volumes

Existing traffic volumes are based on peak hour intersection turn movement counts collected by Counts Unlimited Inc. in January 2021. Due to the Covid-19 pandemic, the peak hour traffic volumes at the study area intersections collected in January 2021 may be less than counts collected before the pandemic. A comparison of historic counts within the study area to current counts was conducted to determine which were higher. Counts collected in 2019 at the intersection of Day Street/Box Springs Road were found to be higher than the counts collected in 2021 at the same location. Therefore, the counts collected in 2019 were used to balance the counts collected in 2021. Count sheets are contained in Appendix B. Detailed volume development worksheets are included in Appendix C.

### 4.2 Project Completion Without Project Traffic Volumes

Project Completion without project peak hour traffic volumes were developed by applying an annual growth rate of 2 percent per year for 2 years to the existing volumes and adding cumulative project trips. The cumulative projects included in the analysis are illustrated in Figure 6. Table C lists the cumulative projects included in the analysis. The cumulative projects are anticipated to generate 504 a.m. peak hour PCE trips, 632 p.m. peak hour PCE trips, and 8,356 daily PCE trips.

### 4.3 With Project Traffic Volumes

Traffic volumes for existing, project completion with project conditions were developed by adding the trip assignment to the corresponding without project peak hour traffic volumes.

### 5.0 EXISTING CONDITIONS

This section discusses the existing transportation conditions in the study area.

## Legend

Cumulative Projects
## translutions

Table C: Cumulative Projects Trip Generation

### 5.1 Existing Roadway Conditions

Regional access to the project site is provided by SR-60 to the north. Local access to the project will be provided by the following roadways:

- Box Springs Road is oriented in the east-west direction and is a 4-lane roadway within the project study area. The City's circulation plan designates Box Springs Road as a "Minor Arterial".
- Sycamore Canyon Road is oriented in the north-south direction and is a 4-lane roadway within the project study area. The City of Riverside's circulation plan designates Sycamore Canyon Road as a 4-lane "110-Foot Arterial" south of Fair Isle Drive and as a 4-lane "88-Foor Arterial" north of Fair Isle Drive.
- Fair Isle Drive is oriented in the east-west direction and is a 4-lane roadway within the project study area. The City of Riverside's circulation element designates Fair Isle Drive as a " 66 -Foot Collector".

### 5.2 Existing Transit Service

Public transportation services within the City of Moreno Valley includes bus transit service provided by the Riverside Transit Agency (RTA) and commuter rail transportation (Metrolink). These services are further described below.

Bus Service. Public transportation in the City of Moreno Valley is provided by RTA, which is the regional transit operator in Riverside County.

- Route 16 provides service on Box Springs Road. Route 16 has major stops at the Moreno Valley Mall, UCE at Bannockburn, and University Avenue at University Village. Route 16 operates at 30-minute headways on weekdays and weekends.

Commuter Rail Service. Commuter rail service is provided by Metrolink, which is operated by the Southern California Regional Rail Authority (SCRRA). Metrolink train service is available between the counties of Ventura, Los Angeles, San Bernardino, Orange, Riverside, and north San Diego. The area is served by the Moreno Valley/March Field Metrolink Station. The Moreno Valley/March Field Station is the nearest Metrolink station to the project site and is approximately 3 miles south of the project site.

Figure 7 illustrates the existing transit services. As shown in Figure 7, the closest transit route to the project is located on Box Springs Road via Route 16.

### 5.3 Existing Pedestrian \& Bicycle Facilities

The City's Bicycle Master Plan includes three types of facilities and are discussed below:

- Class I Multi-use Paths Class I facilities are physically separated from motor vehicle routes, with exclusive rights-of-way for non-motorized users like cyclists and pedestrians and with motor vehicle cross flows kept to a minimum. Class I facilities are often important commuter connections and any proposed paths must be designed for multipurpose use.
- Class II Bicycle Lanes Class II facilities provide an exclusive roadway space for cyclists, demarcated through pavement marking and signage. Bicycle lanes must be one-way facilities and carry bicycle traffic in the same direction as the adjacent motor vehicle traffic. They are typically located along the right side of the street, between the adjacent travel lane and curb, road edge or parking lane.
- Class III Bicycle Routes Class III facilities are suggested bicycle routes marked by signs designating a preferred route between destinations. They are recommended where traffic volumes and roadway speeds are fairly low.

Figure 8 illustrates the existing bicycle facilities within the City. As shown in Figure 8, there are existing Class III bike routes on Box Springs Road. Pedestrian circulation in Moreno Valley is primarily provided via trails and sidewalks. The existing pedestrian sidewalks adjacent to the project are illustrated in Figure 9. As illustrated in Figure 9, there are sidewalks on the east side of Morton Road from Jennings Court to Box Springs Road.

Gateway Highlands Residential
Pedestrian Facilities

### 5.4 Existing Levels of Service

An intersection level of service analysis was conducted for existing conditions to determine current circulation system performance. Figure 10 shows the existing lane geometrics and stop controls at the study intersections. The existing traffic volumes at study intersections are illustrated in Figure 11. Detailed volume development worksheets are included in Appendix C. The existing levels of service for the study area intersections are summarized in Table D. Level of service calculation worksheets are contained in Appendix D. As shown in Table D, all study area intersections are currently operating at satisfactory levels of service with the exception of the following:

- Sycamore Canyon Road/Fair Isle Drive (a.m. peak hour).

### 6.0 PROJECT COMPLETION CONDITIONS

This section discusses project completion transportation conditions in the study area. It is anticipated that the project will open in 2023.

### 6.1 Project Completion Roadway Conditions

Project completion roadway conditions are assumed to be the same as those under existing conditions.

### 6.2 Project Completion Transit Service

Transit service under project completion conditions are anticipated to remain the same as under existing conditions.

### 6.3 Project Completion Pedestrian \& Bicycle Facilities

Pedestrian and bicycle facilities under project completion conditions are anticipated to remain the same as under existing conditions, however, the City of Moreno Valley bicycle master plan is proposing a Class III Bike Route on Morton Road north of Box Springs Road and also converting the Class III Bike Route to a Class II Bike Lane on Box Springs Road. Figure 12 shows the City's bicycle master plan.

### 6.4 Project Completion Without Project Levels of Service

An intersection level of service analysis was conducted for project completion without project conditions to determine circulation system performance. Project completion without project traffic volumes at study intersections are shown in Figure 13. Project completion without project levels of service for the study area intersections are summarized in Table E. Detailed volume development worksheets are included in Appendix C. Level of service calculation worksheets are contained in Appendix D. As shown in Table E, all study area intersections are forecast to operate at satisfactory levels of service with the exception of the following:

- Sycamore Canyon Road/Fair Isle Drive (a.m. and p.m. peak hours).

### 6.5 Project Completion With Project Levels of Service

An intersection level of service analysis was conducted for project completion with project conditions to determine circulation system performance. Project completion with project traffic volumes at study intersections are shown in Figure 14. The project completion with project levels of service for the study area intersections are summarized in Table E. Detailed volume development worksheets are included in Appendix C. Level of service calculation worksheets are contained in Appendix D. As shown in Table E, all study intersections are forecast to operate at satisfactory levels of service with the exception of the following:

- Sycamore Canyon Road/Fair Isle Drive (a.m. and p.m. peak hours).

This intersection exceeds the peak hour delay increase for LOS E (2 seconds or more), when comparing the without project delay to the with project delay. Operational improvements to restore the LOS to pre-project conditions are included in the circulation improvements section.

LOS = Level of Service

### 7.0 CIRCULATION IMPROVEMENTS

Circulation improvements have been recommended at intersection where the project exceeds the appropriate jurisdictions operational requirements. These improvements can include conversion of stop control, signalization, changes to signal phasing, and/or addition of lanes as appropriate. The following improvements have been recommended:

### 7.1 Project Completion With Project Intersection Circulation Improvements

Under project completion with project conditions, the following modifications to intersection configurations are recommended as circulation improvements as follows:

- Sycamore Canyon Road/Fair Isle Drive: Add an overlap phase to the existing northbound right-turn lane. Figure 15 illustrates the project completion with project with recommended improvements and Table F shows the resulting levels of service.

### 8.0 VEHICLE MILES TRAVELED (VMT) SCREENING ANALYSIS

Based on the City of Moreno Valley Transportation Impact Analysis Preparation Guide for Vehicles Miles Traveled and Level of Service Assessment, (June 2020), a project located in a low VMT area can be effectively screened out from a project-level VMT assessment. To identify if the project is in a low VMT-generating area, the WRCOG screening tool was applied using VMT per capita. Figure 16 shows the low VMT area screening for the project. As shown in Figure 16, the project TAZ based VMT per capita is 15.45 miles. The jurisdictional VMT per capita is 19.04 miles. Since the project TAZ VMT per capita is lower than the City's VMT per capita, the project is considered to be in a low VMT generating TAZ and presumed to have a less than significant impact on VMT.

### 9.0 IMPACT CRITERIA FOR CEQA DETERMINATION

This section evaluates the CEQA checklist for impact evaluation.
A. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?
The project is consistent with the City's adopted plans and policies. With implementation of the recommended improvements, the project has less than significant impacts based on the City's impact criteria. The project would not conflict with adopted policies supporting alternative transportation modes. The project will not change roadway designations from those in the City's General Plan. The project will also not result in removal of any of the facilities listed above. Therefore, the project impact is considered less than significant.
B. Conflict or be inconsistent with CEQA Guidelines 15064.3 , subdivision (b)?

Based on the City's Low VMT Screening Tool, the project will not require a full VMT analysis and will therefore have a less than significant impact under CEQA.
C. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?
The design of driveways and other project access locations will be based on City Code, which sets the standard for such design. It is not anticipated that traffic hazards will increase, therefore, the project impact is considered less than significant.
D. Result in inadequate emergency access?

The proposed driveways will be designed in accordance with all applicable design and safety standards required by adopted fire codes, safety codes, and building codes established by the City's Engineering and Fire Departments. The project will not increase delays on street segments substantially, therefore, the project will not result in inadequate emergency access, and the project impact is considered less than significant.

FIGURE 15

[^15]Table F: Project Completion With Project With Improvements Intersection Levels of Service

| Intersection | $\begin{aligned} & \text { LOS } \\ & \text { Std. } \end{aligned}$ | Jurisdiction | Control | With Project |  | WP With Improvements |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | AM Peak Hour | PM Peak Hour | AM Peak Hour | PM Peak Hour |
|  |  |  |  | Delay LOS | Delay LOS | Delay LOS | Delay LOS |
| 1. Sycamore Canyon Blvd/Fair Isle Dr | D | Riverside | Signal | 72 E | 60.5 E * | 52.2 D | 29.6 C |

## Notes:

* Exceeds LOS Standard

TWSC = Two-Way Stop Control; For TWSC intersections, reported delay is for worst-case movement.
LOS = Level of Service

### 10.0 SUMMARY \& CONCLUSIONS

The proposed project is forecast to generate 80 trips in the a.m. peak hour, 107 trips in the p.m. peak hour, and 1,020 daily trips. Based on the intersection LOS analysis, with the circulation improvements, the study intersections will operate at satisfactory LOS under existing and project completion. The project will not require a full VMT analysis based on the Low VMT screening tool and has a less than significant impact on VMT.

## APPENDIX A: SCOPING AGREEMENT

## EXHIBIT A

## Project Scoping Form

This scoping form shall be submitted to the Lead Agency to assist in identifying infrastructure improvements that may be required to support traffic from the proposed project.

## Potential Screening Checks

Is your project screened from specific analyses (see Page 3 of the guidelines related to LOS assessment and Pages 22-23 for VMT screening criteria).

Is the project screened from LOS assessment? $\quad \square$ Yes $\quad \square$ No

LOS screening justification (see Page 3 of the guidelines): $\qquad$
Trip generation is greater than the threshold.
$\qquad$
$\qquad$
$\qquad$

VMT screening justification (see Pages 22-23 of the guidelines): $\qquad$
The project is located in a low VMT area based on residential VMT. Please see attached
screening map. Jurisdictional average 2012 daily residential home-based VMT per capita
is 19.04 miles and that for Project TAZ is 15.45 miles.

Level of Service Scoping

Fire Hazard Analysis and Approach Memorandum

## TECHNICAL FIRE PROTECTION MEMORANDUM

| To: | Douglas Bloom, Fire Marshal, Moreno Valley Fire Department |
| :--- | :--- |
| From: | Dudek Fire Protection Planning Team, Michael Huff, Director |
| Subject: | Gateway Heights Project Fire Hazard Analysis and Approach |
| Date: | 03/31/2022 |
| cc: | Jason Ackerman, Esq., Ackerman Law |
| Attachment(s): | Figures 1-2 |
|  | Attachment 1 - Site Aerial Photograph |
|  | Attachment 2 - Fuel Modification Plan |
|  | Attachment 3-- Site Plan with Revised Dual Project Access |

This Technical Fire Protection Memorandum documents fire protection planning related to project constraints analysis for the subject project. The approach outlined herein responds to your recommended direction during our recent communications regarding emergency ingress/egress to/from the project site and access to defensible space areas.

## Project description

The proposed Gateway Heights development is a 108 unit detached townhouse project on an approximately 33acre site in the City of Moreno Valley.

- "Detached townhouses" (townhouses by CBC definition are attached; structures are likely to be considered SFDs per code)
- Structures are two-story townhouses
- Proposed 16-acre open space lot north of the developed project site

## Existing Site Observations

## Onsite

- Attachment 1 provides a site aerial photograph.
- Vegetation is primarily scattered sage scrub, forbs, and scattered native shrubs and a few ornamental trees in the northeast corner;
- Unmaintained roads/trails traverse the property;
- Evidence of recent fuel reduction activities are present on site.

## Topography

The project site is relatively flat, with a slight upslope gradient to the north; beyond the project to the north is a steep, rocky hillside with sparse scrub and forb vegetation. To the west and south the terrain has gently rolling hills with intermittent drainages. Along the eastern edge of the property is a drainage channel strewn with boulders. To the east of the project is a residential subdivision.

## Vicinity

The project is located in the northeast area of the City of Moreno Valley. The western and northern property lines coincide with the city limits; the lands immediately to the west and north of the property are within unincorporated Riverside County.

- North: open space;
- East of northern open space lot: open space;
- Southeast of project site: residential development;
- West: open space.

## Proposed site plan review / code compliance issues

## Issues to address:

- Driveway lengths: proposed lengths range from 136 to 273 feet with 24 ' width. The driveways for Pads 1 , $3,4,6$ and 8 are less than 150 feet long and would thereby qualify as fire apparatus access roads. The driveways for Pads $2,5,7$ and 9 through 13 are greater than 150 feet long and would not qualify as fire apparatus access roads since no turnarounds are proposed.
- Fuel modification width: 100 -foot FMZ can be provided for most units (Attachment 2). The western most units on Pad 13 (NW corner) are 30 feet from the property line; the units on Pad 7 are 69 feet from the property line; obtaining an off-site FMZ easement would be one approach to resolving this potential issue. However, if an off-site FMZ easement is not feasible due to an unwilling neighboring property owner; then onsite "hardening" features may be required as an alternative method of fire protection (i.e., firewalls on the property line).

## Primary access

Primary access is proposed using Morton Road on the southern side of the project, which has access to Box Springs Road and the SR60/I-215 Freeway.

## Secondary access

In reviewing the Moreno Valley Fire Code, there is no reference identified whereby a secondary access is required for the project. CFC 503.1.2 authorizes the fire code official to require more than one access road based on the potential for impairment of a single road, but it does not require that an additional access road must be provided.

The project design provides two 36 ' foot wide roadways at the entrance to minimize any potential traffic congestion during an emergency setting; one for ingress and one for egress (see Attachment 3). Each entrance roadway connects to separate "legs" of the internal circulation loop road allowing for approximately half of the occupants to exit in each of two distinct directions without conflict.

## Internal circulation

- Loop road system;
- Direct access is provided to all structures;
- Unobstructed internal circulation loop roadway width of 24 feet;
- No dead-end fire apparatus access roads.

## Fuel modification and Vegetation Management

A fuel modification landscape plan has been prepared and submitted for review and approval.
The two "legs" of the internal circulation loop road, along the eastern and western edges of the project, will be located between the property line and structures providing a paved, non-combustible, defensible space as part of the fuel modification zone.

The project will also comply with the following requirements related to fuel modification and vegetation management outlined in the 2022 California Fire Code. The Project-provided fuel modification landscape plan provides additional details on the Project's consistency with these requirements and has been submitted for review to Moreno Valley Fire Department.

### 4906.1 General

Planting of vegetation for new landscaping shall be selected to reduce non-fire-resistant vegetation in proximity to a structure and to maintain vegetation as it matures.

### 4906.2 Application

All new plantings of vegetation in State Responsibility Areas (SRA) and Local Responsibility Areas (LRA) designated as a Very High Fire Hazard Severity Zone shall comply with Sections 4906.3 through 4906.5.3.

### 4906.3 Landscape Plans

Landscape plans shall be provided when required by the enforcing agency. The landscape plan shall include development and maintenance requirements for the vegetation management zone adjacent to structures and roadways, and to provide significant fire hazard reduction benefits for public and firefighting safety.

### 4906.3.1 Contents

Landscape plans shall contain the following:

1. Delineation of the 30 -foot ( 9144 mm ) and 100 -foot ( 30.5 m ) fuel management zones from all structures.
2. Identification of existing vegetation to remain and proposed new vegetation.
3. Identification of irrigated areas.
4. A plant legend with both botanical and common names, and identification of all plant material symbols.
5. Identification of ground coverings within the 30 -foot ( 9144 mm ) zone.

### 4906.4 Vegetation

All new vegetation shall be fire-resistant vegetation in accordance with this section.
Exception: Trees classified as non-fire-resistant vegetation complying with Section 4906.4.2.1.
To be considered fire-resistant vegetation, it must meet at least one of the following:

1. Be identified as fire-resistant vegetation in an approved book, journal or listing from an approved organization.
2. Be identified as fire-resistant vegetation by a licensed landscape architect with supporting justification.
3. Plants considered fire-resistant vegetation and approved by the local enforcing agency.

### 4906.4.1 Shrubs

All new plantings of shrubs shall comply with the following:

1. Shrubs shall not exceed 6 feet ( 1829 mm ) in height.
2. Groupings of shrubs are limited to a maximum aggregate diameter of 10 feet ( 3048 mm ).
3. Shrub groupings shall be separated from other groupings a minimum of 15 feet ( 4572 mm ).
4. Shrub groupings shall be separated from structures a minimum of 30 feet ( 9144 mm ).
5. Where shrubs are located below or within a tree's drip line, the lowest tree branch shall be a minimum of three times the height of the understory shrubs or 10 feet ( 3048 mm ), whichever is greater.

### 4906.4.2 Trees

Trees shall be managed as follows within the 30 -foot ( 9144 mm ) zone of a structure:

1. New trees shall be planted and maintained so that the tree's drip line at maturity is a minimum of 10 feet ( 3048 mm ) from any combustible structure.
2. The horizontal distance between crowns of new trees and crowns of adjacent trees shall not be less than 10 feet ( 3048 mm ).
3. Existing trees shall be trimmed to provide a minimum separation of 10 feet ( 3048 mm ) away from chimney and stovepipe outlets per Title 14, Section 1299.03.

### 4906.4.2.1 Non-Fire-Resistant Vegetation

New trees not classified as fire-resistant vegetation, such as conifers, palms, pepper trees and eucalyptus species, shall be permitted provided the tree is planted and maintained so that the tree's drip line at maturity is a minimum 30 feet ( 9144 mm ) from any combustible structure.

## Defensible Space

The project will comply with the following defensible space requirements outlined in the 2022 California Fire Code.

### 4907.1 General

Hazardous vegetation and fuels shall be managed to reduce the severity of potential exterior wildfire exposure to buildings and to reduce the risk of fire spreading to buildings as required by applicable laws and regulations. Defensible space will be managed around all buildings and structures in State Responsibility Areas (SRA) as required in Public Resources Code 4291.

### 4907.2 Application

Buildings and structures located in the following areas shall maintain the required hazardous vegetation and fuel management:

1. All unincorporated lands designated by the State Board of Forestry and Fire Protection as a State Responsibility Area (SRA).
2. Land designated as a Very High Fire Hazard Severity Zone by the Director.
3. Land designated in ordinance by local agencies as a Very High Fire Hazard Severity Zone pursuant to Government Code Section 51179.

### 4907.3 Requirements

Hazardous vegetation and fuels around all buildings and structures shall be maintained in accordance with the following laws and regulations:

1. Public Resources Code, Section 4291.
2. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 3, Article 3, Section 1299.03.
3. California Government Code, Section 51182.
4. California Code of Regulations, Title 19, Division 1, Chapter 7, Subchapter 1, Section 3.07.

## Relevant code sections:

California Residential Code R337. Materials and Construction Methods for Exterior Wildfire Exposure: minimum standards for a new building located in a WUI area to resist the intrusion of flame or burning embers projected by a vegetation fire.

California Fire Code 503.1.2 Additional access. Authorizes the fire code official to require more than one access road based on the potential for impairment of a single road, but it does not require that an additional access road must be provided.

## Moreno Valley Fire Code Amendments

- 503.2.1 Fire apparatus access roads - 24 feet wide
- 903.2 Single Family Dwellings shall have automatic fire sprinkler systems
- 4906.4 Fuel Modification Requirements for New Construction. Must meet the criteria established by Riverside County Fire Department (Information Bulletin \#08-05). Submit a Fuel Modification Plan; indicate setback, irrigated and thinning zones (30’ Green Zone; 100' total defensible space).
- App B. Fire Flow and Hydrant Spacing

## Fire environment assessment

The project site's fire environment assessment was performed by Dudek fire protection planners with extensive similar experience throughout California over the last 25 years.

- The site is located within a Very High Fire Hazard Severity Zone.
- No evidence of recent fire on site; fire history data indicates the site has had multiple fires within a fivemile radius and the site itself has burned four times since 1980.
- Vegetation on site and to the north, west and south is sparse and low growing, which would reduce the impacts from a wildland fire;
- Adjacent hillslopes to the north exist up and away from the project site. This reduces wildfire risks at the project site as wildfire is more likely to spread at slower rates when moving downslope compared to an upslope direction.
- The project may be subject to an approaching wildland fire from the northeast during Santa Ana wind conditions. While direct impacts from wildfire cannot be completely ruled out, structural ignition risks from ember cast are minimal given modern construction requirements in alignment with Chapter 7A of the California Building Code, per California Office of the State Fire Marshals Office data.

## Fire Behavior assessment

- Selected fuel models Sh1 (low load, dry climate shrub) and Sh2 (moderate load, dry climate shrub) to represent the existing vegetative fuels. Site photographs provided in Attachment 4 depicts the fuels present on and adjacent to the project site.
- Selected wildland fire run scenarios from the NE and SW representing an offshore Santa Ana wind event and an onshore wind event. Santa Ana wind events represent "worst-case" conditions and represent the highest wind speeds and lowest fuel moistures likely to occur at the project site.
- Conducted fire behavior modeling using the BehavePlus 6 modeling system for existing conditions and post-development fuel modification (see results in Table 1). The location of model runs is provided in Figure 1.

Table 1. Fire Behavior Modeling Results

| Fire Scenarios | Flame Length (feet) | Fireline Intensity (BTU/feet/second) | Spread Rate (mph) | Spotting Distance (miles) |
| :---: | :---: | :---: | :---: | :---: |
| Scenario 1: $15 \%$ slope, 40 mph NE wind |  |  |  |  |
| Fuel Model Sh1 (scrub/mustard) | 8.4 | 584 | 1.0 | 0.7 |
| Fuel Model Sh2 (scrub/mustard) | 14.1 | 1,781 | 0.8 | 0.9 |
| Scenario 1 Fuel Mod: 10\% slope, 40 mph NE wind |  |  |  |  |
| Fuel Model 8 (irrigated landscaping) | 2.6 | 46 | 0.1 | 0.3 |
| Scenario 2: 15\% slope, 20 mph SW wind |  |  |  |  |
| Fuel Model Sh1 (scrub/mustard) | 8.5 | 589 | 1.0 | 0.7 |
| Fuel Model Sh2 (scrub/mustard) | 14.1 | 1,796 | 0.8 | 0.9 |
| Scenario 2 Fuel Mod: 15\% slope, 20 mph SW wind |  |  |  |  |
| Fuel Model 8 (irrigated landscaping) | 2.6 | 46 | 0.1 | 0.3 |

- An additional assessment was conducted to determine fire behavior during a Santa Ana wind event (worstcase weather conditions) in areas adjacent to the project site using the FlamMap software package. Direct impacts from wildfire are not likely at the project site due to flame lengths less than 20 feet in adjacent lands and the planned Fuel Modification Zones.

The following paragraphs provide descriptions of the inputs used in processing the FlamMap model. In addition, data sources are cited, and any assumptions made during the modeling process are described. A graphical representation of the model results is provided in Figure 2

## Elevation

The elevation data file represents units of meters above mean sea level (AMSL). Elevations in the FlamMap analysis area range from 1,585 to 2,625 feet AMSL. Elevation data is a required input file for FlamMap runs and are necessary for adiabatic adjustment of temperature and humidity and for conversion of fire spread between horizontal and slope distances.

## Slope

The slope data file represents values in degrees of inclination from horizontal. Slope values in the FlamMap analysis area range from 0-32 degrees. The slope input file is necessary for computing slope effects on fire spread and solar radiance.

## Aspect

The aspect data file represents values in azimuth degrees. Aspect values are important in determining the solar exposure of grid cells.

## Wind and Fuel Moisture

Wind speed and fuel moisture values for the FlamMap analysis utilized the same values as those used in the BehavePlus runs for Santa Ana weather scenarios. Fuel moisture data was collected from local RAWS stations. Wind alignment was set at 70 degrees, and wind speed was set to 40 mph .

## Fuel Model

The fuel model data file was based on the 40 Scott and Burgan (2005) models and represents distinct distributions of fuel loading found among surface fuel components (live and dead), size classes, and fuel types.

## Recommendations / AM\&M Justification

The Project includes the need for alternative materials and methods for FMZ and dead-end road length. This Fire Protection Technical Report proposes the following approach (AM\&Ms) and justification. The AM\&M's are evaluated to provide at least equivalent protection based on the experience of the preparers of this report.

1. Site fire environment and fire behavior is not significant. The vegetation on site and on adjacent lands is sparse - dried mustard and scattered sage. The ridge behind the project site slopes up and away from project, is covered with sparse light vegetation and rocks, which is beneficial.
2. Structures must be constructed in accordance with CRC R337 building codes (within FHSZ) and will include features such as ember resistant vents (baffled not just mesh).
3. FMZ will be provided around entire perimeter of the project site (see Fuel Modification Plan - Attachment 2). (Where the FMZ and Jurisdictional Delineation area overlaps along the upper portion of the
southeastern property line, active fuel treatment will be conducted so as to avoid impacts. The channel is comprised of large boulders with limited vegetation and in its existing state acts as a fuel modification area.) The Project will be hardened throughout.
a. The Project shall attempt to obtain an interim off-site FMZ easement for Pads 7 and 13 so that a total of 100 feet of FMZ from the Project's structures can be achieved. The off-site FMZ would be limited to thinning/mowing of existing vegetation annually. Should the off-site easement be infeasible based on an unwilling neighbor, then alternative fire protection is proposed:
i. Wherever less than 100 feet of FMZ (on and off site combined) is achievable, a 6 foot tall, masonry wall will be constructed at the property line in lieu of the additional FMZ.

Wall Justification: When buildings are set back from slopes, and a wall is placed at the property line, flames and radiant heat are deflected vertically reducing the effects of heat on the structure. If a structure cannot be setback adequately, or where the slope is less than $30 \%$, a noncombustible wall can help deflect the flames from the structure (NFPA 2005). The duration of radiant heat impact on the exposed side of the house is also reduced. The structure setback is important to avoid heat and/or flame intersection with the structure.

Heat-deflecting landscape walls of masonry construction that are six feet in height will be incorporated at the edge of lots where FMZs are the most constrained (Pads 7 and 13). The landscape walls provide a vertical, non-combustible surface in the line of heat, fumes, and flame. Once these fire byproducts intersect the wall, they are deflected upward or, in the case where lighter fuels are encountered, they are quickly consumed, heat and flame are absorbed or deflected by the wall, and the fuels burn peaks out within a short ( 30 second2 minute) time frame (Quarles and Beall 2002). Walls like these have been observed to deflect heat and airborne embers on numerous wildfires in San Diego, Orange, Los Angeles, Ventura, and Santa Barbara County.

Rancho Santa Fe Fire Protection District, Laguna Beach Fire Department, Orange County Fire Authority, Murieta Fire Protection District, and others utilize these walls as alternative methods based on observed performance during wildfires. This has led to these agencies approving use of non-combustible landscape walls as mitigations for reduced fuel modification zones and reduced setbacks at top of slope. While fuel moistures vary slightly across these jurisdictions, Santa Ana wind events create similar fuel moistures across a broad geographical area due to intensive drying of fuels. Therefore, this mitigation is also justified within the Moreno Valley Fire Protection District. These walls are consistent with NFPA 1144 Standard for Reducing Structure Ignition Hazards from Wildland Fire - 2008 Edition, Section 5.1.3.3 and A.5.1.3.3 and International Urban Wildland Interface Code (ICC 2012). NFPA 1144, A.5.1.3.3 states: "Noncombustible walls and barriers are effective for deflecting radiant heat and windblown embers from structures." These walls and barriers are usually constructed of noncombustible materials (concrete block, bricks, stone, stucco) or earth where 30 feet ( 9 meters) of defensible space is not available.
4. Provide FMZ inspections annually. Inspections will be performed by RCFD or, at their preference, the Project would fund inspections by a $3^{\text {rd }}$ party to their satisfaction. This measure will ensure that the FMZ is functioning as intended.
5. Identify and mark fire lane and/or no parking areas as required.
6. Provide enlarged turns at both internal loop roadway turns.
7. Dual pane (both panes) tempered glass for openings on exposed sides of the structures on Pads 7 and 13.
8. Loop internal road system with two 36-foot wide, multi-lane, physically-separated ingress/egress roadways.
9. Hardening at Project access point via pavement and landscaping.
10. Fire access points at the terminus of each driveway along the north side of Project for firefighting. Additionally, the area behind the northeast side of the project includes a 10-to-12-foot flat area that will be available to pedestrian firefighters via the provided accesses at the end of each driveway in that area.

## Summary

The structures will be constructed following CRC R337 requirements to ensure reduced ignition potential. In addition, hardening of the structures including enhanced vents and enhanced glazing requirements will be included on selected units as noted above.

The internal circulation provides the necessary access to all structures with no dead-end fire apparatus access roads that require fire department turnarounds. The minimum roadway width of 36 feet meets the requirements for buildings less than 30 feet in height. Hydrants will need to be installed within the project site.

The primary access off Morton Road has been enhanced to include two 36' wide physically separated roadways for ingress and egress to reduce traffic congestion during emergencies, by providing dedicated ingress and egress routes.

## Exhibit B

Notice of Intent to Adopt a Mitigated Negative Declaration/Newspaper Notice

## CITY OF MORENO VALLEY NOTICE OF INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION

NOTICE IS HEREBY GIVEN that the City of Moreno Valley is considering a recommendation that the project herein identified will have no significant environmental impact in compliance with Section 15070 of the CEQA guidelines. A copy of the MITIGATED NEGATIVE DECLARATION and the ENVIRONMENTAL CHECKLIST, which supports the proposed findings, are on file at the City of Moreno Valley.

Project: General Plan Amendment (PEN20-0095)
Change of Zone (PEN20-0096);
Conditional Use Permit for a Planned Unit Development (PEN21-0066), and
Tentative Tract Map No. 38459 (PEN22-0127)
Applicant: HengHou Group
Owner:
Representative:
Location:
Proposal:
Shizao Zheng
Jason Ackerman
East side of Morton Road approximately 300 feet north of Jennings Court. (APN: 256-150-001)
To allow construction of a 108 -unit detached townhouse Planned Unit Development with private streets, a 0.89 -acre community park, and common area improvements on a 16.59 -acre portion of 32.56 acres of vacant land.

## Council District: 2

This Notice of Intent (NOI) has been prepared to notify agencies and interested parties that the City of Moreno Valley, as the Lead Agency, has prepared an Initial Study/Mitigated Negative Declaration (IS/MND) pursuant to the requirements of the California Environmental Quality Act (CEQA) to evaluate the potential environmental impacts associated with construction and operation of the project as described below.

Project Description: The Project consists of the following entitlements: General Plan Amendment (PEN20-0095) from "R2 Residential" and "Hillside Residential" to "R10 Residential" and "Open Space"; Change of Zone (PEN20-0096) from Residential 2 (R2) District and Hillside Residential (HR) District to Residential 10 (R10) District and Open Space (OS) District; Conditional Use Permit (PEN21-0066) to establish flexible standards using the Planned Unit Development regulations for a new 108 -unit detached townhouse condominium development with a 0.89 -acre community park; Tentative Tract Map No. 38459 will subdivide the 32.56 gross acres of vacant land into a 16.59 -acre common-area lot with 108 air space parcels for condominium purposes and a public park and a 15.97-acre remainder open-space lot.

The Project site is not included on any list of hazardous materials sites compiled pursuant to Government Code Section 65962.5.

Document Availability: The Initial Study/Mitigated Negative Declaration, and all documents incorporated and/or referenced therein, can be reviewed during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday and Friday, 7:30 a.m. to $4: 30$ p.m.) at the City of Moreno Valley Planning Division counter, located at 14177 Frederick Street, Moreno Valley, CA 92553. The documents may also be reviewed on the City's website at http://www.moreno-valley.ca.us/cdd/documents/about-projects.html.

Potential Environmental Impacts: The City of Moreno Valley has prepared an Initial Study to determine the environmental effects associated with the above actions and finds the issuance of a Mitigated Negative Declaration is the appropriate level of environmental review. The Initial Study/Mitigated Negative Declaration concludes that all potentially significant impacts of the Project would be mitigated to a less than significant level.

Comment Deadline: Pursuant to Section 15105(b) of the CEQA Guidelines, the City has established a 30 -day public review period for the Initial Study/Mitigated Negative Declaration, which begins March 2, 2023 and ends March 31, 2023. Written comments on the Initial Study/Mitigated Negative Declaration must be received at the City of Moreno Valley Community Development Department by no later than the conclusion of the 30-day review period, 5:30 p.m. on March 31, 2023. Written comments on the Initial Study/Mitigated Negative Declaration should be addressed to:

Luis Lopez, Contract Planner<br>14177 Frederick Street<br>Post Office Box 88005<br>Moreno Valley, California 92552<br>Phone: (951) 413-3206<br>Email: luisl@moval.org

## Exhibit C

Mitigation Monitoring and Reporting Program

## Mitigation Monitoring and Reporting Program

Gateway Heights Project (PEN 21-0066)
City of Moreno Valley

| Mitigation Measure | Timing of Verification | Party Responsible for Implementation and Reporting | Status/Date/Initials |
| :---: | :---: | :---: | :---: |
| Aesthetics |  |  |  |
| RR AES-1: The Developer shall prepare a Lighting Plan that provides the type and location of proposed exterior lighting and signage, subject to the review and approval of the City's Development Services Department. All new lighting shall be shielded and down-cast, such that the light is not cast onto adjacent properties or visible from above. Night lighting shall be directed away from the MSHCP Conservation Area to protect species within the MSHCP Conservation Area from direct and indirect night lighting. Prior to approval of the Final Design, an analysis of potential impacts from light and glare from interior and exterior building lighting, safety and security lighting, and vehicular traffic accessing the site shall be submitted to the City for review and approval. This analysis shall demonstrate that due to shielded and directional lighting in compliance with Mt. Palomar lighting standards, no lighting shall be introduced into the adjacent Conservation Area. If potential lighting impacts are identified, the lighting design (placement, light spectrum, and shielding), or other design solutions acceptable to the City of Moreno Valley shall be implemented to eliminate lighting impacts on the adjacent Conservation Areas. Shielding, including Turtle Bay type LED lighting, shall be incorporated into Project designs to ensure ambient lighting in the MSHCP Conservation Area is not increased. The Lighting Plan shall include monitoring during construction and post-project to demonstrate lighting levels do not increase in the Conservation Area. If light standards are exceeded, the Project Applicant is responsible for immediate implementation of remedial actions to reduce light levels to acceptable levels identified in the Lighting Plan. | Prior to commencing ground- or vegetation disturbing activities | Project Proponent |  |

## Mitigation Monitoring and Reporting Program

Gateway Heights Project (PEN 21-0066)
City of Moreno Valley

| Mitigation Measure | Timing of Verification | Party Responsible for Implementation and Reporting | Status/Date/Initials |
| :---: | :---: | :---: | :---: |
| Biological Resources |  |  |  |
| RR BIO-1: The Developer shall obtain a tree removal permit from the City, if fuel modification, grading, or other improvements require removal of any heritage trees. The Developer would incorporate mitigation trees, replacing removed heritage trees, resulting from a tree removal permit into the Project's final landscape plan. | Prior to Construction | City's Development Services Department |  |
| MM BIO-1: To maintain compliance with the Migratory Bird Treaty Act (MBTA and California Fish and Game Code Sections 3503, 3503.5, and 3513, site preparation activities (ground disturbance, construction activities, staging equipment, and/or vegetation removal activities for the project shall be avoided, to the greatest extent possible, during the nesting bird season. If ground disturbing and/or vegetation clearance activities are scheduled to occur during the avian nesting season, a pre- construction nesting bird survey shall be conducted by a qualified biologist within the Project Site and a 500 -foot buffer around the Project Site. Surveys shall be conducted within 3 days prior to initiation of activity and shall be conducted between dawn and noon. The survey results shall be provided to the City's Planning Department. The Project Applicant shall adhere to the following: <br> 1. Applicant shall designate a biologist (Designated Biologist) experienced in: identifying local and migratory bird species of special concern; conducting bird surveys using appropriate survey methodology; nesting surveying techniques, recognizing breeding and nesting behaviors, locating nests and breeding territories, and identifying nesting stages and nest success; determining/establishing appropriate avoidance and minimization measures; and monitoring the efficacy of implemented avoidance and minimization measures. | Prior to commencing ground- or vegetation disturbing activities | Project Proponent |  |

## Mitigation Monitoring and Reporting Program

Gateway Heights Project (PEN 21-0066)
City of Moreno Valley

| Mitigation Measure | Timing of Verification | Party Responsible for Implementation and Reporting | Status/Date/Initials |
| :---: | :---: | :---: | :---: |
| 2. Pre-activity field surveys shall be conducted at the appropriate time of day/night, during appropriate weather conditions, no more than 3 days prior to the initiation of Project activities. Surveys shall encompass all suitable areas including trees, shrubs, bare ground, burrows, cavities, and structures. Survey duration shall take into consideration the size of the Project site; density, and complexity of the habitat; number of survey participants; survey techniques employed; and shall be sufficient to ensure the data collected is complete and accurate. <br> If nesting birds are not found within the project site, site preparation and construction activities may begin during the nesting/breeding season. If nesting birds (including nesting raptors are detected, then avoidance or minimization measures shall be undertaken in consultation with the City of Moreno Valley and California Department of Fish and Wildlife. Measures shall include immediate establishment of an avoidance buffers shall be implemented as determined by a qualified biologist and approved by the City of Moreno Valley, based on their best professional judgement and experience. The buffer shall be of a distance to ensure avoidance of adverse effects to the nesting bird by accounting for topography, ambient conditions, species, nest location, and activity type. The buffer around the nest shall be delineated and flagged, and no construction activity shall occur within the buffer area until a qualified biologist determines nesting species have fledged and the nest is no longer active or the nest has failed. The biologist shall monitor the nest at the onset of project activities, and at the onset of any changes in such project activities (e.g., increase in number or type of equipment, change in equipment usage, etc.) to determine the efficacy of the buffer. If the biologist determines that such project activities may be causing an adverse reaction, the biologist shall adjust the buffer accordingly or |  |  |  |

## Mitigation Monitoring and Reporting Program

Gateway Heights Project (PEN 21-0066)
City of Moreno Valley

| Mitigation Measure | Timing of Verification | Party Responsible for Implementation and Reporting | Status/Date/Initials |
| :---: | :---: | :---: | :---: |
| implement alternative avoidance and minimization measures, such as redirecting or rescheduling construction or erecting sound barriers. All work within these buffers will be halted until the nesting effort is finished (i.e., the juveniles are surviving independent from the nest). All nests shall be monitored as determined by the qualified biologist until nestlings have fledged and dispersed or it is otherwise confirmed that the nest has been unsuccessful or abandoned. Work can resume within these avoidance areas when no other active nests are found. Upon completion of the survey and nesting bird monitoring, a report shall be prepared and submitted to City of Moreno Valley Planning Division for mitigation monitoring compliance record keeping. |  |  |  |
| MM BIO-2: To avoid project-related impacts to burrowing owls potentially occurring on or in the vicinity of the project site, the Developer shall have a qualified biologist conduct a projectspecific habitat assessments and preconstruction survey for burrowing owl in accordance with the March 2006 Burrowing Owl Survey Instructions for the Western Riverside County Multiple Species Habitat Conservation Plan Area. This survey shall occur within 30 days prior to ground-disturbance activities (e.g., vegetation clearing, clearing, and grubbing, tree removal, site watering) within those portions of the project site containing suitable burrowing owl habitat. If ground disturbing activities in these areas are delayed or suspended for more than 30 days after the pre- construction survey, the area shall be resurveyed for owls. The results of the survey should be submitted to the City and California Department of Fish and Wildlife within three days of survey completion. In addition, a preconstruction survey for burrowing owl shall be conducted within 3 days prior to initiation of Project activities and reported to CDFW as described above. | Prior to commencing ground- or vegetation disturbing activities | Project Proponent |  |

## Mitigation Monitoring and Reporting Program

Gateway Heights Project (PEN 21-0066)
City of Moreno Valley

| Mitigation Measure | Timing of Verification | Party Responsible for Implementation and Reporting | Status/Date/Initials |
| :---: | :---: | :---: | :---: |
| If no burrowing owls are observed during the survey, site preparation and construction activities may begin. If burrowing owl are present within the survey area, then avoidance or minimization measures shall be undertaken in consultation with the City of Moreno Valley, California Department of Fish and Wildlife (CDFW) and US Fish and Wildlife Service (USFWS). CDFW shall be sent written notification within 48 hours of detection of burrowing owls. If active nests are identified on the Project site, the Project applicant shall not commence activities until it can be determined that the burrows are not being used by adult or juvenile owls or following CDFW approval of a Burrowing Owl Plan as described below. If owl presence is difficult to determine, a qualified biologist shall monitor the burrows with motionactivated trail cameras for at least 24 hours to evaluate burrow occupancy. The onsite qualified biologist will verify the nesting effort has finished according to methods identified in the Burrowing Owl Plan. <br> The qualified biologist and Project Applicant shall coordinate with the City, CDFW, and USFWS to develop a Burrowing Owl Plan to be approved by the City, CDFW, and USFWS prior to commencing Project activities. The Burrowing Owl Plan shall describe proposed avoidance, relocation, monitoring, minimization, and/or mitigation actions. The Burrowing Owl Plan shall include the number and location of occupied burrow sites and details on proposed buffers if avoiding the burrowing owls or information on the adjacent or nearby suitable habitat available to owls for relocation. If no suitable habitat is available nearby for relocation, details regarding the habitat characteristics of the proposed relocation site, creation and funding of artificial burrows (numbers, location, and type of burrows) and management activities for relocated owls shall also be included in the Burrowing Owl Plan. The City shall implement the Burrowing Owl Plan |  |  |  |

## Mitigation Monitoring and Reporting Program

Gateway Heights Project (PEN 21-0066)
City of Moreno Valley

| Mitigation Measure | Timing of Verification | Party Responsible for Implementation and Reporting | Status/Date/Initials |
| :---: | :---: | :---: | :---: |
| following CDFW and USFWS review and approval. <br> If burrowing owls are observed within Project Site(s) during Project implementation and construction, the Project applicant shall notify CDFW immediately in writing within 72 hours of detection. A Burrowing Owl Plan shall be submitted to CDFW for review and approval within two weeks of detection and no Project activity shall continue within 1000 feet of the burrowing owls until CDFW approves the Burrowing Owl Plan. The City shall be responsible for implementing appropriate avoidance and mitigation measures, including burrow avoidance, passive or active relocation, or other appropriate mitigation measures as identified in the Burrowing Owl Plan. <br> A final report shall be prepared by the qualified biologist documenting the results of the burrowing owl surveys and detailing avoidance, minimization, and mitigation measures. The final report shall be submitted to the City and CDFW within 30 days of completion of the survey and burrowing monitoring for mitigation monitoring compliance record keeping. |  |  |  |
| MM BIO-3: For all features identified as jurisdictional that cannot be avoided, the Developer shall obtain permits from the respective agencies prior to the initiation of construction activities. These permits include a Clean Water Act (CWA) Section 404 permit from the USACE, a CWA Section 401 water quality certification from the Regional Water Quality Control Board, and a CDFW Section 1602 Notification of Lake or Streambed Alteration. <br> The Developer shall implement and comply with all measures required by the jurisdictional permits. Mitigation for the loss of jurisdictional resources shall be negotiated with the resource agencies (US Army Corps of Engineers, Regional Water Quality Control Board, and California | Prior to Construction | Developer/Respective Agencies |  |

## Mitigation Monitoring and Reporting Program

| :---: | :---: | :---: | :---: |
| Department of Fish and Wildlife) during the regulatory permitting process. |  |  |  |
| MM BIO-4: To ensure long-term conservation of avoided riparian/riverine resources the Project Applicant will record a deed restriction, conservation easement, or other appropriate mechanisms over avoided riparian/riverine resources on the Project Site. The recorded realty instrument shall be provided to the City prior to grading. <br> The Applicant proposes to compensate for impacts to MSHCP riparian/riverine areas by providing a 1:1 ratio of reestablishment or a 2:1 ratio of rehabilitation credits at Riverpark Mitigation Bank. If credits at Riverpark Mitigation Bank are not available prior to grading, the Developer shall compensate for impacts to jurisdictional waters and riparian/riverine areas by providing a $31: 1$ ratio of offsite land within the Santa Ana Watershed to be acquired for the purpose of In-Perpetuity Preservation, or through the purchase of mitigation credits at an established off-site Mitigation Bank in Western Riverside County. Mitigation proposed on land acquired for the purpose of inperpetuity mitigation that is not part of an agency-approved mitigation bank or in-lieu fee program shall include the preservation, creation, restoration, and/or enhancement of similar habitat within the Santa Ana Watershed pursuant to a Habitat Mitigation and Monitoring Plan (HMMP) to be approved by the Lead and Responsible agencies. The HMMP shall be prepared prior to any impacts, and it shall provide details as to the implementation of mitigation, maintenance, future monitoring, and management. The goal of the mitigation shall be to preserve, create, restore, and/or enhance similar habitat with equal or greater function and value than the affected habitat. | Prior to commencing ground- or vegetation disturbing activities | Project Proponent |  |

## Mitigation Monitoring and Reporting Program

Gateway Heights Project (PEN 21-0066)
City of Moreno Valley

| Mitigation Measure | Timing of Verification | Party Responsible for Implementation and Reporting | Status/Date/Initials |
| :---: | :---: | :---: | :---: |
| MM BIO-5: The Developer shall pay the applicable MSHCP Development Mitigation Fee prior to initiation of grading activities. | Prior to Initiation of Grading Activities | Developer |  |
| MM BIO-6: The following avoidance and minimization measures shall be implemented during Project construction activities: <br> - Construction limits along the northern and eastern boundaries of the Project shall be clearly marked so that adjacent native vegetation is avoided. <br> - Staging and storage areas for spoils, equipment, materials, fuels, lubricants, and solvents shall be located within the designated impact area or adjacent developed areas. <br> - A Stormwater Pollution Prevention Plan shall be developed and implemented. <br> - Invasives: Invasive species identified in Table 6-2 of the MSHCP shall not be used in development landscape plans or restoration plan activities. <br> - Construction-related and long-term Project operation noise shall not exceed 65 dBA Leq in the adjacent MSHCP Criteria Cell. Prior to issuance of land development permits, including clearing or grubbing and grading and/or construction permits for areas within or adjacent to the MSHCP Criteria Cell, the applicant shall prepare and submit to the satisfaction of the City, an acoustical analysis to demonstrate that the 65 dBA Leq noise level is not exceeded in the Criteria Cell. The acoustical analysis shall describe the methods by which construction noise shall not exceed 65 dBA Leq | Ongoing During Construction | Developer/Qualified Biologist |  |

## Mitigation Monitoring and Reporting Program

City of Moreno Valley

| Mitigation Measure | Timing of Verification | Party Responsible for Implementation and Reporting | Status/Date/Initials |
| :---: | :---: | :---: | :---: |
| and how noise levels will be monitored during construction and for the life of the project. Noise abatement methods may include, but are not limited to, reoperation of specific construction activities, installation of noise abatement at the source, and/or installation of noise abatement at the receiving areas. <br> - Noise Plan: Prior to approval of the Final Design, a Noise plan shall be submitted to the City of Moreno Valley for review and approval. The Noise Plan shall identify noise generating land uses that may affecting the MSHCP Conservation Area and shall incorporate setbacks, berms or walls to minimize the effects of noise on MSHCP Conservation Area resources pursuant to applicable rules, regulations and guidelines related to land use noise standards. The MSHCP identifies that Project noise impacts do not exceed the residential standards within the Conservation Areas. For planning purposes, wildlife within the MSHCP Conservation Area should not be subject to noise that would exceed residential noise standards. The Noise Plan shall include monitoring during construction and postproject to demonstrate noise levels in the Conservation Area do not exceed residential standards. If noise standards are exceeded, the Project Applicant is responsible for immediate implementation of remedial actions to reduce noise levels to acceptable levels. |  |  |  |

## Mitigation Monitoring and Reporting Program

| detected, the procedures identified in MM CUL-1 will be implemented. |  |  |  |
| Energy |  |  |  |
| RR ENE-1: The Project must be designed in accordance with the applicable Title 24 Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations [CCR], Title 24, Part 6). These standards are updated, nominally every three years, to incorporate improved energy efficiency technologies and methods. | Prior to Construction | Developer |  |
| RR ENE-2: The Project is subject to the California Green Building Standards Code (CALGreen) (CCR, Title 24, Part 11). These standards are updated, nominally every three years, to incorporate improved energy efficiency technologies and methods. | Prior to Construction | Developer |  |
| RR ENE-3: The Project shall comply with applicable policies of the Moreno Valley Climate Action Plan by complying with meeting the following policies: <br> 1. Require new multi-family residential development to reduce the need for external trips by providing useful services/facilities on-site such as electric vehicle infrastructure. (Policy TR-9) <br> 2. incentives such as streamlined permitting or bonus density for new multi-family buildings and reroofing projects to install "cool" roofs consistent with the current California Green Building Code (CALGreen) standards for commercial and industrial buildings. (Policy R-1) <br> 3. Require new construction and major remodels to install interior real-time energy smart meters in line with current utility provider (e.g. MVU, SCE) efforts. (Policy R-2) <br> 4. Reduce emissions from heavyduty construction equipment by limiting idling based on South Coast Air Quality Management | Prior to Construction | Developer |  |

| updated, detailing which features were relocated, the process taken, and updated maps provided documentation of the features' new location. The site record should clearly indicate that the features are not in their original location and why they were relocated. |  |  |  |
| MM TCR 10: Prior to any earthmoving activities, milling features 3 and 5 of CA-RIV-8274 will be fenced and identified as an Environmentally Sensitive Area (ESA). The Developer will ensure that appropriate temporary fencing is installed (i.e., orange fabric/barrier fencing) to prevent any unintentional disturbances to features 3 and 5 of CA-RIV-8274 during any earthmoving activities on the project site. The fencing will be installed before clearing and grubbing and will not be removed until all earthmoving activities have been completed. The project archaeologist and Pechanga Tribal Monitor will be on site to monitor the fence installation and removal and will conduct daily inspections of the fencing to make sure that it is intact and has not been breached. If the project archaeologist and/or Pechanga Tribal Monitor identify a breach of the fence, i.e., removal, cut, depressed, driven over or intentionally breached in any way, all work within a 25 -foot buffer shall cease and the Developer, City, project archaeologist and the Pechanga Tribe shall meet and confer as to the best method to repair the fencing. The person(s) responsible for the breach and the Construction Supervisor (or appropriate supervisory personnel) shall be required to retake the sensitivity training provided at the beginning of construction, in addition to any other remedies considered appropriate. | Prior to any Earthmoving Activities | Developer/Qualified Professional Archeologist/City's Development Services Department/Contractor |  |

## ORDINANCE NO. XXX

#### Abstract

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING CHANGE OF ZONE (PEN20-0096) TO AMEND THE CITY ZONING ATLAS FROM RESIDENTIAL 2 DISTRICT (R2) AND HILLSIDE RESIDENTIAL DISTRICT (HR) TO RESIDENTIAL 10 DISTRICT (R10) AND OPEN SPACE (OS) DISTRICT FOR THE PROPERTY LOCATED ON THE EAST SIDE OF MORTON ROAD, APPROXIMATELY 300 FEET NORTH OF JENNINGS COURT (APN 256-150-001).

WHEREAS, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California; and has the authority to approve amendments to the City's General Plan and City's Zoning Atlas; and

WHEREAS, HengHou Group ("Applicant") has submitted is seeking approval for the Gateway Heights Residential Project which includes approval of General Plan Amendment (PEN20-0095), Conditional Use Permit (PEN21-0066) and Tentative Tract Map 38459 (PEN22-0127) for the development of a 108 -unit detached townhouse condominium Planned Unit Development on 32.56 -acres, with associated amenities and public improvements ("Proposed Project") located on the east side of Morton Road, approximately 300 feet north of Jennings Court (APN 256-150-001) ("Project Site"); and

WHEREAS, on June 8, 2023, the public hearing to consider the Proposed Project was duly conducted by the Planning Commission at which time all interested persons were provided with an opportunity to testify and to present evidence; and

WHEREAS, on June 8, 2023, a public hearing was conducted by the Planning Commission to consider General Plan Amendment (PEN20-0095), after which the Planning Commission approved Planning Commission Resolution 2023-23, a recommendation that the City Council approve General Plan Amendment (PEN20-0095); and

WHEREAS, on June 8, 2023, a hearing was conducted by the Planning Commission whereby the Planning Commission approved Planning Commission Resolution No. 2023-22, recommending the City Council approve the Mitigated Negative Declaration/Initial Study, Mitigation Monitoring and Reporting Program, and Proposed Project; and

WHEREAS, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing was scheduled for September 5, 2023, before the City Council and notice thereof was duly published and posted, and mailed to all property owners of record with 600 feet of the Site; and

WHEREAS, on September 5, 2023, the City Council continued the consideration of the Proposed Project and public hearing to a date uncertain; and

WHEREAS, on December 5, 2023, the public hearing to consider the Proposed Project was duly conducted by the City Council at which time all interested persons were provided with an opportunity to testify and to present evidence; and

WHEREAS, on December 5, 2022, in accordance with the provisions of the California Environmental Quality Act (CEQA) and CEQA Guidelines, the City Council considered and approved Resolution 2023certifying the Proposed Project's Mitigated Negative Declaration, and adopting a Mitigation Monitoring and Reporting Program.

## THE CITY COUNCIL OF THE CITY OF MORENO VALLEY DOES ORDAIN AS FOLLOWS:

## Section 1. AMENDMENT OF THE OFFICIAL ZONING ATLAS

The City of Moreno Valley Official Zoning Atlas, as adopted by Ordinance No. 981, on August 3, 2021, of the City of Moreno Valley, and as amended thereafter from time to time by the City Council of the City of Moreno Valley, is further amended by placing in effect the zone or zone classification to page 96 of the Official Zoning Atlas as shown on the attached map marked "Exhibit A" and included herein by reference and on file in the office of the City Clerk.

## Section 2. EFFECT OF ENACTMENT

Except as specifically provided herein, nothing contained in this ordinance shall be deemed to modify or supersede any prior enactment of the City Council which addresses the same subject addressed herein.

## Section 3. NOTICE OF ADOPTION

Within fifteen days after the date of adoption hereof, the City Clerk shall certify to the adoption of this ordinance and cause it to be posted in three public places within the city.

## Section 4. EFFECTIVE DATE

This ordinance shall take effect thirty days after the date of its adoption.
[Remainder of Page Intentionally Left Blank]

## APPROVED AND ADOPTED this $5^{\text {th }}$ day of December, 2023.

## RESOLUTION NUMBER 2023-XX

#### Abstract

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING GENERAL PLAN AMENDMENT (PEN20-0095), TO AMEND THE GENERAL PLAN LAND USE MAP, CHANGING THE LAND USE DESIGNATION FROM RESIDENTIAL 2 (R2) AND HILLSIDE RESIDENTIAL (HR) TO RESIDENTIAL 10 (R10) AND PARKS/OPEN SPACE (OS), CONDITIONAL USE PERMIT (PEN21-0066) FOR A PLANNED UNIT DEVELOPMENT, AND TENTATIVE TRACT MAP NO. 38459 (PEN22-0127) FOR THE DEVELOPMENT OF A 108-UNIT TOWNHOUSE CONDOMINIUM

WHEREAS, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California; and has the authority to approve amendments to the City's General Plan and City's Zoning Atlas; and

#### Abstract

WHEREAS, HengHou Group ("Applicant") is seeking approval for the Gateway Heights Residential Project, which includes approval of General Plan Amendment (PEN20-0095), Conditional Use Permit (PEN21-0066) and Tentative Tract Map 38459 (PEN22-0127) for the development of a 108 -unit detached townhouse condominium Planned Unit Development on 32.56 -acres, with associated amenities and public improvements ("Proposed Project") located on the east side of Morton Road, approximately 300 feet north of Jennings Court (APN 256-150-001) ("Project Site"); and

WHEREAS, Section 9.02.060 (Conditional Use Permits) of the Municipal Code acknowledges that the purpose of a conditional use permit is to allow the establishment of uses that may have special impacts or uniqueness such that their effect on the surrounding environment cannot be determined in advance of the use being proposed for a particular location and that the conditional use permit application process involves the review of the location, design, and configuration of improvements related to the Proposed Project, and the potential impact of the Proposed Project on the surrounding area based on fixed and established standards; and

WHEREAS, Chapter 9.14 (Land Division) of the Moreno Valley Municipal Code imposes conditions of approval upon projects for which a Tentative Tract Map is required, which conditions may be imposed by the City to address on-site improvements, off-site improvements, the manner in which the Project Site is used, and any other conditions as may be deemed necessary to protect the public health, safety, and welfare and ensure that the Proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

WHEREAS, the applications for the Proposed Project have been evaluated in accordance with Section 9.02.060 (Conditional Use Permits) and Chapter 9.14 (Land Divisions), respectively, of the Municipal Code with consideration given to the City's General Plan, Zoning Ordinance, and other applicable laws and regulations; and

WHEREAS, on June 8, 2023, a public hearing to consider the Proposed Project was duly conducted by the Planning Commission, at which time all interested persons
were provided with an opportunity to testify and present evidence; and
WHEREAS, on June 8, 2023, a public hearing was conducted by the Planning Commission to consider General Plan Amendment (PEN20-0095), after which the Planning Commission approved Planning Commission Resolution 2023-23, a recommendation that the City Council approve General Plan Amendment (PEN20-0095); and

WHEREAS, on June 8, 2023, a public hearing was conducted by the Planning Commission to consider Conditional Use Permit (PEN21-0066) and Tentative Tract Map 38459 (PEN22-0127), whereby the Planning Commission approved Planning Commission Resolution 2023-26, a recommendation that the City Council approve Conditional Use Permit (PEN21-0066) and Tentative Tract Map 38237 (PEN22-0127); and

WHEREAS, on June 8, 2023, a hearing was conducted by the Planning Commission whereby the Planning Commission approved Planning Commission Resolution No. 2023-22, recommending the City Council approve the Mitigated Negative Declaration/Initial Study, Mitigation Monitoring and Reporting Program, and Proposed Project; and

WHEREAS, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code and Government Code section 65905, a public hearing was scheduled for September 5, 2023, before the City Council and notice thereof was duly published and posted, and mailed to all property owners of record with 600 feet of the Site; and

WHEREAS, on September 5, 2023, the public hearing to consider the Proposed Project was duly conducted by the City Council. At said hearing, the City Council continued the consideration of the Proposed Project to a future date; and

WHEREAS, on December 5, 2023, the public hearing to consider the Proposed Project was duly conducted by the City Council at which time all interested persons were provided with an opportunity to testify and to present evidence; and

WHEREAS, on December 5, 2022, in accordance with the provisions of the California Environmental Quality Act (CEQA) and CEQA Guidelines, the City Council considered and approved Resolution 2023- $\qquad$ certifying the Proposed Project's Mitigated Negative Declaration, and adopting a Mitigation Monitoring and Reporting Program.

## NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

## Section 1. Recitals and Exhibits

That the foregoing Recitals and attached Exhibits are true and correct and are hereby incorporated by this reference.

## Section 2. Notice

That pursuant to Government Code section 66020(d)(1), notice is hereby given that the Proposed Project is subject to certain fees, dedications, reservations and other exactions as provided herein, in the staff report and conditions of approval (collectively, "Conditions"); and these Conditions constitute written notice of a statement of the amount of such fees, and a description of the dedications, reservations, and other exactions, and interested parties have ninety-days from the approval of this Resolution to protest these fees, dedications, reservations, and other exactions, pursuant to Government Code Section 66020(a).

## Section 3. Evidence

That the City Council has considered all of the evidence submitted into the administrative record for the General Plan Amendment, including, but not limited to, the following:
(a) Moreno Valley General Plan and all relevant provisions contained therein;
(b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;
(c) The Moreno Valley General Plan amendment changing the land use designation from Residential 2 (R2) and Hillside Residential (HR) to Residential 10 (R10) and Parks/Open Space (OS) and all relevant provisions contained therein as shown on Exhibit A;
(d) Applications for the approval of a General Plan Amendment (PEN20-0095), Change of Zone (PEN20-0096), Tentative Tract Map 38459 (PEN22-0127), and Conditional Use Permit (PEN21-0066), and all documents, records and references contained therein;
(e) Testimony, comments, and correspondence from all persons that were provided at, or prior to, the June 8, 2023, Planning Commission public hearing;
(f) Planning Commission Resolution No. 2023-22, recommending that the City Council certify and approve the Initial Study/Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, and approve the Proposed Project;
(g) Staff Report prepared for the City Council's consideration and all documents, records, and references related thereto, and Staff's presentation at the September 5, 2023, public hearing; and
(h) Testimony, comments, and correspondence from all persons that were provided at, or prior to, the City Council September 5, 2023, and the December 5, 2023, public hearing.

## Section 4. Findings

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings:
(a) That the Proposed Project is consistent with the existing goals, objectives, policies, and programs of the General Plan;
(b) That the Proposed Project will not adversely affect the public health, safety, or general welfare;
(c) That the Proposed Project is consistent with the purposes and intent of Title 9;
(d) That the Proposed Project complies with all applicable zoning and other regulations;
(e) The location, design, and operation of the Proposed Project will be compatible with existing and planned land uses in the vicinity;
(f) That the design or improvement of the proposed subdivision is consistent with applicable general and specific plans
(g) That the Project Site is physically suitable for the type of development;
(h) That the Project Site of the proposed land division is physically suitable for the proposed density of the development;
(i) That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife and/or their habitat;
(j) That the design of the Proposed Project and the proposed improvements is not likely to cause serious public health problems;
(k) That the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision;
(I) That the requirements of CEQA have been satisfied;
(m) That the proposed land division is not subject to the Williamson Act pursuant to the California Land Conservation Act of 1965;
(n) That the proposed land division and the associated design and improvements are consistent with applicable ordinances of the city;
(o) That the design of the land division provides, to the extent feasible, for future passive or natural heating and cooling opportunities in the subdivision; and
(p) That the effect of the Proposed Project on the housing needs of the region were considered and balanced against the public service needs of the residents of Moreno Valley and available fiscal and environmental resources

## Section 5. Approval

That based on the foregoing Recitals, Evidence, and Findings, the City Council hereby approves the Proposed Project, which includes General Plan Amendment (PEN200095) as depicted in Exhibit A, and the necessary and corresponding amendment to the City's Zoning Atlas, Conditional Use Permit (PEN21-0066) and Tentative Tract Map 38459 (PEN22-0127), attached hereto as Exhibit B.

## Section 6. Repeal of Conflicting Provisions

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

## Section 7. <br> Severability

That the City Council declares that, should any provision, section, paragraph,
sentence or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

## Section 8. Effective Date

That this Resolution shall take effect immediately upon the date of adoption.

## Section 9. Certification

That the City Clerk shall certify to the passage of this Resolution.
PASSED AND ADOPTED THIS 5 ${ }^{\text {th }}$ day of December 2023.

Ulises Cabrera, Mayor

CITY OF MORENO VALLEY CONDITIONS OF APPROVAL<br>Conditional Use Permit (PEN21-0066)<br>Tentative Tract Map No. 38459 (PEN22-0127)

## EFFECTIVE DATE: <br> EXPIRATION DATE:

## COMMUNITY DEVELOPMENT DEPARTMENT

## Planning Division

1. This approval is for Conditional Use Permit (PEN22-0066) for a Planned Unit Development to address development standards for Tentative Tract Map 38459 (PEN22-0127), a subdivision of approximately 32.56 acres of vacant land into an approximate 16.59-acre common-area lot with 108 air space parcels for condominium purposes with a public park, and an approximate 15.97-acre remainder open-space lot, including development standards and design criteria for the construction of new homes and public amenities. A change or modification to the land use or the approved site plans may require a separate approval. Prior to any change or modification, the property owner shall contact the City of Moreno Valley Community Development Department to determine if a separate approval is required.
2. The Homeowners Association, developer, or the developer's successor-in-interest shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust.
3. This approval shall expire three years after the approval date of this project unless used or extended as provided for by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever. Use means the beginning of substantial construction contemplated by this approval within the three-year period, which is thereafter pursued to completion.
4. The Developer shall defend, indemnify and hold harmless the City, city council, commissions, boards, subcommittees and the City's elected and appointed officials, commissioners, board members, officers, agents, consultants and employees ("City Parties") from and against any and all liabilities, demands, claims, actions or proceedings and costs and expenses incidental thereto (including costs of defense, settlement and reasonable attorneys' fees), which any or all of them may suffer, incur, be responsible for or pay out as a result of or in connection with any challenge to the legality, validity or adequacy of any of the following items: (i) any prior or current agreements by and among the City and the Developer; (ii) the current, concurrent and subsequent permits, licenses and entitlements approved by the City; (iii) any environmental determination made by the City in connection with

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 2
the Project Site and the Project; and (iv) any proceedings or other actions undertaken by the City in connection with the adoption or approval of any of the above. In the event of any administrative, legal, equitable action or other proceeding instituted by any third party (including without limitation a governmental entity or official) challenging the legality, validity or adequacy of any of the above items or any portion thereof, the Parties shall mutually cooperate with each other in defense of said action or proceeding. Notwithstanding the above, the City, at its sole option, may tender the complete defense of any third party challenge as described herein. In the event the City elects to contract with special counsel to provide for such a defense, the City shall meet and confer with the Developer regarding the selection of counsel, and the Developer shall pay all costs related to retention of such counsel by the City.
5. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris.
6. The site shall be developed in accordance with the approved plans on file in the Community Development Department - Planning Division, the Municipal Code regulations, General Plan, Gateway Heights PUD, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official.
7. Any signs indicated on the submitted plans are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), require separate application and approval by the Planning Division.
8. All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.

## Special Conditions

9. Prior to grading permits, the developer or successor in interest shall submit a wall and fence plan showing basin fencing, to include wrought iron fencing with pilasters.
10. Prior to approval of the first certificate of occupancy for a townhouse unit, a basin maintained by an HOA or other private entity, landscape (trees, shrubs and groundcover) and irrigation shall be installed, and maintained by the HOA or other private entity with documentation provided to the Planning Division.
11. Prior to issuance of grading permits, colors and materials for exterior building materials including roofing, fences/walls, etc., shall be submitted to and approved by the Planning Division as this project is adjacent to a Hillside Residential land use

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 3
designation. All exterior colors and building materials shall be consistent with the Gateway Heights PUD and shall blend with the surrounding natural environment.
12. The grading plans shall show the open space lot to be preserved, and any conservation easement lots.
13. A drought tolerant landscape palette shall be utilized throughout the tract in compliance with the City's Landscape Requirements, the Gateway Heights PUD document, and the Preliminary and Final Fuel Modification / Vegetation Control Plan.
14. Prior to any site disturbance and/or grading plan submittal, or prior to the recordation of a final map, a mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant/owner. No City permit or approval shall be issued until such fee is paid. (CEQA)
15. Prior to recordation of the final subdivision map, the following documents shall be submitted to and approved by the Planning Division which shall demonstrate that the project will be developed and maintained in accordance with the intent and purpose of the approval:

## 1. The document to convey title

2. Deed restrictions, easements, or Covenants, Conditions and Restrictions to be recorded

The approved documents shall be recorded at the same time that the subdivision map is recorded. The documents shall contain provisions for general maintenance of the site, joint access to proposed parcels, open space use restrictions, conservation easements, guest parking, feeder trails, water quality basins, lighting, landscaping and common area use items such as general building maintenance (condominium townhomes) public park amenities and other recreation facilities. The approved documents shall also contain a provision, which provides that they may not be terminated and/or substantially amended without the consent of the City and the developer's successor-in-interest.

In addition, the following deed restrictions and disclosures shall be included within the document and grant deed of the properties:
a. The developer and homeowners association shall promote the use of native plants and trees and drought tolerant species.
b. All lots designated for open space and or detention basins, shall be included as an easement to, and maintained by a Homeowners Association (HOA) or other

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 4
public or private maintenance entity. Language to this effect shall be included and reviewed within the required Covenant Conditions and Restrictions (CC\&Rs) prior to the approval of the final map.
c. Maintenance of any and all common facilities.
d. A conservation easement for lettered lots shall be recorded on the deed of the property and shown on the final map.
16. Prior to the issuance of building permits, the developer shall provide documentation that contact was made to the U.S. Postal Service to determine the appropriate type and location of mailboxes.
17. Prior to grading plan approval, wall and fence plans shall be submitted to and approved by the Planning Division subject to the City's Municipal Code including the following:
a. Perimeter fencing shall be constructed of decorative masonry with pilasters and wrought iron.
b. Galvanized steel rock garden walls may be used for private patio spaces at each townhome.
c. Non-combustible fencing is required for all lots adjacent to all fuel modification zones, subject to the approval of the Fire Department.
18. Prior to the issuance of any grading permits, the owner/developer or successor in interest shall record a deed restriction on the subject site, affecting all riverine features and buffer areas of the site stating that no fuel modification activities will be allowed within any riverine features. The deed restriction shall further state that fuel modification maintenance activities that occur in the buffer areas around, but not overlapping, the riverine features, may be done using only hand tools and no native plant species may be removed. The owner/developer shall acknowledge that the intention of this deed restriction / restrictive covenant shall be binding upon all future owners, successors and heirs to the subject property. A public disclosure notice/ statement describing the above deed restriction shall be recorded on the title of all subsequently-subdivided land parcels and air parcels created for the development of a detached townhouse condominium development.
19. In accordance with Developer's obligation to defend, indemnify and hold harmless the City, including but not limited to as set forth in more detail in the Project's Conditions of Approval, Moreno Valley Municipal Code Section 9.02.310 (Indemnification of City for Discretionary Approvals), and the Project application, Developer shall enter into an Advanced Funding Agreement with the City no later

Page 5
than ten (10) calendar days from Planning Commission's approval of the Project. A copy of said Agreement is on file with the Community Development Director.

## Prior to Grading Permit

20. Prior to the issuance of grading permits, the site plan and grading plans shall show decorative hardscape (e.g. colored concrete, stamped concrete, pavers or as approved by the Planning Official) consistent and compatible with the design, color and materials of the proposed development for all driveway ingress/egress locations of the project.
21. Prior to issuance of any grading permit, all Conditions of Approval, Mitigation Measures and Airport Land Use Commission Conditions of Approval shall be printed on the grading plans.
22. Prior to issuance of any grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project approval. No City permit or approval shall be issued until such fee is paid. (CEQA)
23. Prior to issuance of any grading permit, all Conditions of Approval, Mitigation Measures and Airport Land Use Commission Conditions of Approval shall be printed on the building plans.
24. Prior to issuance of any building permits, final Landscaping and Irrigation Plans, and Final Fuel Modification/ Vegetation Control Plans, shall be submitted for review and approval by the Planning Division and Fire Department. After the third plan check review for landscape plans, an additional plan check fee shall apply. The plans shall be prepared in accordance with the City's Landscape Requirements and shall include:
a. Drought tolerant landscape shall be used. Sod shall be limited to common open space gathering areas.
b. Street trees shall be provided every 40 feet on center in the right of way, subject to approval by the Fire Department.
c. Enhanced landscaping shall be provided at all driveway entries and street corner locations The review of all utility boxes, transformers etc. shall be coordinated to provide adequate screening from public view.
d. All site perimeter landscape and irrigation shall be installed prior to the release of certificate of any occupancy permits for the townhouse cluster pad in

question.

## Building Division

25. Prior to submittal, all new development, including residential second units, are required to obtain a valid property address prior to permit application. Addresses can be obtained by contacting the Building Safety Division at 951.413.3350.
26. Contact the Building Safety Division for permit application submittal requirements.
27. Any construction within the city shall only be as follows: Monday through Friday seven a.m. to seven p.m(except for holidays which occur on weekdays), eight a.m. to four p.m.; weekends and holidays (as observed by the city and described in the Moreno Valley Municipal Code Chapter 2.55), unless written approval is first obtained from the Building Official or City Engineer.
28. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.
29. The proposed development shall be subject to the payment of required development fees as required by the City's current Fee Ordinance at the time a building application is submitted or prior to the issuance of permits as determined by the City.
30. The proposed project will be subject to approval by the Eastern Municipal Water District and all applicable fees and charges shall be paid prior to permit issuance. Contact the water district at 951.928.3777 for specific details.
31. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, accessibility, etc.
32. The proposed project's occupancy shall be classified by the Building Official and must comply with exiting, occupancy separation(s) and minimum plumbing fixture requirements. Minimum plumbing fixtures shall be provided per the California Plumbing Code, Table 422.1. The occupant load and occupancy classification shall be determined in accordance with the California Building Code.
33. The proposed residential project shall comply with the California Green Building Standards Code, Section 4.106.4, mandatory requirements for Electric Vehicle Charging Station (EVCS).
34. Prior to permit issuance, every applicant shall submit a properly completed Waste

Management Plan (WMP), as a portion of the building or demolition permit process. (MC 8.80.030)

## FIRE DEPARTMENT

## Fire Prevention Bureau

35. All Fire Department access roads or driveways shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])
36. The Fire Department emergency vehicular access road shall be (all weather surface) capable of sustaining an imposed load of $80,000 \mathrm{lbs}$. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. The approved fire access road shall be in place during the time of construction. Temporary fire access roads shall be approved by the Fire Prevention Bureau. (CFC 501.4, and MV City Standard Engineering Plan 108d)
37. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft ( 0.3 m drop in 6 m ), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)
38. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4)
39. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (CFC 501.3)
40. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)
41. Prior to issuance of building permits, plans specifying the required structural materials for building construction in high fire hazard severity zones shall be submitted to the Fire Prevention Bureau for approval. (CFC, 4905)
42. Prior to issuance of Certificate of Occupancy or Building Final, all buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve inches in height. (CFC 505.1, MVMC 8.36.060[I])
43. Existing fire hydrants on public streets are allowed to be considered available.

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 8
Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 507, 501.3) a - After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.
44. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in effect at the time of building plan submittal.
45. The Fire Code Official is authorized to enforce the fire safety during construction requirements of Chapter 33. (CFC Chapter 33 \& CBC Chapter 33)
46. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)
47. Fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty-four (24) feet and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])
48. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])
49. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.060, CFC 501.4)
50. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Code Official. All exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)
51. The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the C.F.C., MVMC, and NFPA 24. Fire hydrants shall be located no closer than 40 feet to a building. A fire hydrant shall be located within 50 feet of the fire department connection for buildings protected with a fire

sprinkler system. The size and number of outlets required for the approved fire hydrants are ( $6 " \times 4 " \times 21 / 2^{\prime \prime} \times 21 / 2 "$ ) (CFC 507.5.1, 507.5.7, Appendix C, NFPA 24-7.2.3, MVMC 912.2.1)
52. Fire Department access driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. (CFC 503 and MVMC 8.36.060, CFC 501.4)
53. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)
54. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)
55. Preliminary fuel modification plans shall be reviewed and approved by the fire code official concurrent with the submittal for approval of any tentative map. Final fuel modification plans shall be submitted to and approved by the fire code official prior to the issuance of a grading permit.
56. Prior to issuance of Building Permits, plans for structural protection from vegetation fires shall be submitted to the Fire Prevention Bureau for review and approval. Measures shall include, but are not limited to: noncombustible barriers (cement or block walls), fuel modification zones, etc. (CFC Chapter 49)
57. Plans for private water mains supplying fire sprinkler systems and/or private fire hydrants shall be submitted to the Fire Prevention Bureau for approval. (CFC 105 and CFC 3312.1)
58. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering said waterflow for 2 hour(s) duration at $20-\mathrm{PSI}$ residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 507.3, Appendix B)
59. Prior to issuance of Certificate of Occupancy or Building Final, all residential dwellings shall display street numbers in a prominent location on the street side of the residence in such a position that the numbers are easily visible to approaching emergency vehicles. The numbers shall be located consistently on each dwelling throughout the development. The numerals shall be no less than four (4) inches in height and shall be low voltage lighted fixtures. (CFC 505.1, MVMC 8.36.060[I])

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 10
60. Single Family Dwellings. Schedule "A" fire prevention approved standard fire hydrants ( 6 " $\times 4 " \times 21 / 2^{\prime \prime}$ ) shall be located at each intersection of all residential streets. Hydrants shall be spaced no more than 500 feet apart in any direction so that no point on the street is more than 250 feet from a hydrant. Minimum fire flow shall be 1000 GPM for 1 hour duration of 20 PSI. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, serving one and two-family residential developments, standard fire hydrants shall be provided at spacing not to exceed 1000 feet along the tract boundary for transportation hazards. (CFC 507.3, Appendix B, MVMC 8.36.060).
61. Final Fire Protection Fuel Modification Plan shall be submitted, reviewed, and approved before the submittal of Building Plans to the City of Moreno Valley's Planning and Fire Departments. Fuel Modification Plan's implementation and installation shall be in place before occupancy is granted for first dwelling unit.
62. Fuel Modification Maintenance shall be delineated by providing legal binding statement in community's CC\&Rs specifying the community's responsibility, covenants, and conditions for maintenance of fuel modification zones and vegetation. Such document(s) shall be provided for review to the Fire Prevention Bureau and Land Development before the recordation of the final tract map.
63. Dead-end streets and/or fire apparatus access roads in excess of 150 feet in length shall be provided with an approved turnaround for fire apparatus.
64. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5)
65. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall: a. Be signed by a registered civil engineer or a certified fire protection engineer; b. Contain a Fire Prevention Bureau approval signature block; and c. Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

## FINANCIAL \& MANAGEMENT SERVICES DEPARTMENT

Moreno Valley Utility

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 11
66. This project shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to Moreno Valley Utility electric streetlight improvements consisting of streetlight poles, mast-arms, fixtures conduit, wiring, terminations and pull boxes to serve the identified development and other adjoining, abutting, or benefiting projects as determined by the Land Development Department along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and/or delivery of any and all "street light services" to and within the project.
67. This project shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to Moreno Valley Utility fiber optic cable improvements consisting of conduit, and pull boxes to serve the identified development and other adjoining, abutting, or benefiting projects as determined by Moreno Valley Utility along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and/or delivery of any and all "fiber optic services" to and within the project.

## PUBLIC WORKS DEPARTMENT

## Land Development

68. Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, shall be required prior to $90 \%$ security reduction or the end of the one-year warranty period of the public streets as approved by the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half ( 2 to $21 / 2$ ) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.
69. The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]
70. The final approved conditions of approval (COAs) issued and any applicable Mitigation Measures by the Planning Division shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plans.
71. The developer shall monitor, supervise and control all construction related activities,

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 12
so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
(a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.
(b) Observance of working hours as stipulated on permits issued by the Land Development Division.
(c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
(d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.
Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.
72. Drainage facilities (e.g., catch basins, water quality basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.
73. In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. [GC 66462.5]
74. If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit. [MC 9.14.210(B)(C)]
75. The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]

Tentative Tract Map No. 38459 (PEN22-0127)
Page 13
76. The maintenance responsibility of the proposed storm drain line shall be clearly identified. Storm drain lines within private property will be privately maintained and those within public streets will be publicly maintained.
77. The proposed private storm drain system shall connect to the proposed West End Moreno Valley Master Drainage Plan (MDP) Line B, which is preliminarily designed to be two 3' X 6' RCB culverts. A storm drain manhole shall be placed at the right-of-way line to mark the beginning of the publicly maintained portion of this storm drain.
78. This project shall submit civil engineering design plans, reports and/or documents (prepared by a registered/licensed civil engineer) for review and approval by the City Engineer per the current submittal requirements, prior to the indicated threshold or as required by the City Engineer. The submittal consists of, but is not limited to, the following:
a. Tract Map (recordation prior to building permit issuance);
b. Rough grading w/ erosion control plan (prior to grading permit issuance);
c. Precise grading w/ erosion control plan (prior to grading permit issuance);
d. Public Improvement plan (e.g., street / storm drain with striping, RCFC storm drain, sewer / water, etc.) (prior to encroachment permit issuance);
e. Final drainage study (prior to grading plan approval);
f. Final WQMP (prior to grading plan approval);
g. Easements, dedications, vacations, etc. (prior to map approval);
h. As-Built revision for all plans (prior to Occupancy release).
79. Water quality best management practices (BMPs) designed to meet Water Quality Management Plan (WQMP) requirements for development shall not be used as a construction BMP. Water quality BMPs shall be maintained for the entire duration of the project construction and be used to treat runoff from those developed portions of the project. Water quality BMPs shall be protected from upstream construction related runoff by having proper best management practices in place and maintained. Water quality BMPs shall be graded per the approved design plans and once landscaping and irrigation has been installed. If residential, it and its maintenance shall be turned over to an established Homeowner's Association (HOA).

## Prior to Grading Plan Approval

80. Resolution of all drainage issues shall be as approved by the City Engineer.
81. A final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include, but not be limited to: existing and proposed hydrologic conditions as well as

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 14
hydraulic calculations for all drainage control devices and storm drain lines. The study shall analyze 1, 3, 6 and 24 -hour duration events for the $2,5,10$ and 100-year storm events [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.
82. Emergency overflow areas shall be shown at all applicable drainage improvement locations in the event that the drainage improvement fails or exceeds full capacity.
83. A final project-specific Water Quality Management Plan (WQMP) shall be submitted for review and approved by the City Engineer, which:
a. Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;
b. Incorporates Source Control BMPs and provides a detailed description of their implementation;
c. Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and
d. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.
A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division. A digital (pdf) copy of the approved final project-specific Water Quality Management Plan (WQMP) shall be submitted to the Land Development Division.
84. The final project-specific Water Quality Management Plan (WQMP) shall be consistent with the approved P-WQMP, as well as in full conformance with the document: "Water Quality Management Plan - A Guidance Document for the Santa Ana Region of Riverside County" dated October 22, 2012. The F-WQMP shall be submitted and approved prior to application for and issuance of grading permits. At a minimum, the F-WQMP shall include the following: Site Design BMPs; Source Control BMPs, Treatment Control BMPs, Operation and Maintenance requirements for BMPs and sources of funding for BMP implementation.
a. The Applicant has proposed to incorporate the use of bioretention. Final design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance document.
b. The Applicant shall substantiate the applicable Hydrologic Condition of Concerns (HCOC) in Section F of the F-WQMP.
c. All proposed LID BMP's shall be designed in accordance with the RCFC\&WCD's Design Handbook for Low Impact Development Best Management Practices, dated September 2011.
d. The proposed LID BMP's as identified in the project-specific P-WQMP shall

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 15
be incorporated into the Final WQMP.
e. The NPDES notes per City Standard Drawing No. MVFE-350-0 shall be included in the grading plans.
f. Post-construction treatment control BMPs, once placed into operation for post-construction water quality control, shall not be used to treat runoff from construction sites or unstabilized areas of the site.
85. The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:
a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.
b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.
c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.
d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.
86. Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
87. The developer shall select Low Impact Development (LID) Best Management Practices (BMPs) designed per the latest version of the Water Quality Management Plan (WQMP) - a guidance document for the Santa Ana region of Riverside County.
88. The developer shall submit recorded slope easements from adjacent property owners in all areas where grading resulting in slopes is proposed to take place outside of the project boundaries. For all other offsite grading, written permission from adjacent property owners shall be submitted.
89. A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.
90. For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID\#) from the State Water Quality Control Board (SWQCB) which shall be

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 16
noted on the grading plans.

## Prior to Grading Permit

91. A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]
92. If the developer chooses to construct the project in phases, a Construction Phasing Plan for the construction of on-site public or private improvements shall be submitted for review and approved by the City Engineer.
93. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]
94. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]
95. A digital (pdf) copy of all approved grading plans shall be submitted to the Land Development Division.

## Prior to Map Approval

96. All proposed street names shall be submitted for review and approved by the City Engineer, if applicable. [MC 9.14.090(E.2.k)]
97. A copy of the Covenants, Conditions and Restrictions (CC\&R's) shall be submitted for review and approved by the City Engineer. The CC\&R's shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project. In addition, for single-family residential development, bylaws and articles of incorporation shall also be included as part of the maintenance agreement for any water quality BMPs.
98. After recordation, a digital (pdf) copy of the recorded map shall be submitted to the Land Development Division.
99. Resolution of all drainage issues shall be as approved by the City Engineer.
100. If the project involves the subdivision of land, maps may be developed in phases with the approval of the City Engineer. Financial security shall be provided for all public improvements associated with each phase of the map. The boundaries of

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 17
any multiple map increment shall be subject to the approval of the City Engineer. If the project does not involve the subdivision of land and it is necessary to dedicate right-of-way/easements, the developer shall make the appropriate offer of dedication by separate instrument. In either case, the City Engineer may require the dedication and construction of necessary utility, street or other improvements beyond the project boundary, if the improvements are needed for circulation, parking, access, or for the welfare or safety of the public. This approval must be obtained prior to the Developer submitting a Phasing Plan to the California Bureau of Real Estate. [MC 9.14.080(B)(C), GC 66412 \& 66462.5]
101. Maps (prepared by a registered civil engineer and/or licensed surveyor) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
102. Under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act, this project shall establish a Home Owners Association (HOA) to finance the maintenance of the "Water Quality BMPs". Any lots which are identified as "Water Quality BMPs" shall be owned in fee by the HOA.
103. The developer shall guarantee the completion of all related improvements required for this project by executing a Public Improvement Agreement (PIA) with the City and posting the required security. [MC 9.14.220]
104. All public improvement plans required for this project shall be approved by the City Engineer in order to execute the Public Improvement Agreement (PIA).
105. All street dedications shall be free of all encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.

## Prior to Improvement Plan Approval

106. The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless otherwise approved by the City Engineer.
107. The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.
108. The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 18
109. The design plan and profile shall be based upon a centerline, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer.
110. Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.
111. The hydrology study shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of current City standards shall apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the City Engineer. [MC 9.14.110 A.2]
112. All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
113. Any missing or deficient existing improvements along the project frontage shall be constructed or secured for construction. The City Engineer may require the ultimate structural section for pavement to half-street width plus 18 feet or provide core test results confirming that existing pavement section is per current City Standards; additional signing \& striping to accommodate increased traffic imposed by the development, etc.
114. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.
115. All dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.
116. Prior to improvement plan approval, pavement core samples of existing pavement shall be taken and findings submitted to the City for review and consideration of

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 19
pavement improvements. The City will determine the adequacy of the existing pavement structural section. If the existing pavement structural section is found to be adequate, the developer may still be required to perform a 2 inch grind and overlay or slurry seal, depending on the severity of existing pavement cracking, as required by the City Engineer. If the existing pavement section is found to be inadequate, the Developer shall replace the pavement to meet or exceed the City's pavement structural section standard.

## Prior to Encroachment Permit

117. A digital (pdf) copy of all approved improvement plans shall be submitted to the Land Development Division.
118. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.
119. Any work performed within public right-of-way requires an encroachment permit.

## Prior to Building Permit

120. An engineered-fill certification, rough grade certification and compaction report shall be submitted for review and approved by the City Engineer. A digital (pdf) copy of the approved compaction report shall be submitted to the Land Development Division. All pads shall meet pad elevations per approved grading plans as noted by the setting of "blue-top" markers installed by a registered land surveyor or licensed civil engineer.
121. For all subdivision projects, the map shall be recorded (excluding model homes). [MC 9.14.190]
122. A walk through with a Land Development Inspector shall be scheduled to inspect existing improvements within public right of way along project frontage. Any missing, damaged or substandard improvements including ADA access ramps that do not meet current City standards shall be required to be installed, replaced and/or repaired. The applicant shall post security to cover the cost of the repairs and complete the repairs within the time allowed in the public improvement agreement used to secure the improvements.
123. Certification to the line, grade, flow test and system invert elevations for the water

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 20
quality control BMPs shall be submitted for review and approved by the City Engineer (excluding models homes).
124. Prior to building permit issuance, the developer shall dedicate the following right of way to accommodate the required improvements:
(a) The necessary street right of way dedication on the east side of Morton Road (60’ R/W / 36' CC: Local Street, City Standard No. MVSI-107A-0 (Modified)) along the project frontage.
(b) The necessary street right of way dedication on the west side of Morton Road (60’ R/W / 36' CC: Local Street, City Standard No. MVSI-107A-0 (Modified)) for transition, alignment, and/or drainage purposes.
(c) A 4 foot minimum pedestrian right of way dedication behind any driveway approach per City Standard No. MVSI-112C-0 on Morton Road, as applicable.
(d) Corner cutback right of way dedication per City Standard No. MVSI-165-0 on all intersecting public streets, as directed by the City Engineer.

## Prior to Occupancy

125. All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
126. The final/precise grade certification shall be submitted for review and approved by the City Engineer.
127. The developer shall complete all public improvements in conformance with current City standards, except as noted in the Special Conditions, including but not limited to the following:
a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights (SCE: LS-2), signing, striping, under sidewalk drains, landscaping and irrigation, medians, pavement tapers/transitions and traffic control devices as appropriate.
b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.
c. City-owned utilities.
d. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.
128. A "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant", "Maintenance Agreement for Water Quality Improvements located in the public right-of-way" and a "Declaration of Restrictive Covenants (encroachment on City easement)" shall be recorded to provide public notice of the maintenance requirements to be implemented per the approved final project-specific WQMP. A

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 21
boilerplate copy of the covenants and agreements can be obtained by contacting the Land Development Division.
129. The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:
a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).
b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.
130. The Developer shall comply with the following water quality related items:
a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.
b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;
c. Demonstrate that Developer is prepared to implement all non-structural BMPs described in the approved final project-specific WQMP; and
d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.
e. Clean and repair the water quality BMP's, including re-grading to approved civil drawing if necessary.
f. Obtain approval and complete installation of the irrigation and landscaping.
131. Prior to occupancy, the following improvements shall be completed:

Morton Road (60' R/W / 36' CC: Local Street, City Standard No. MVSI-107A-0 (Modified)) shall be constructed to achieve a half-width of 18' plus 12' beyond centerline, along the entire project's west frontage. Morton Road shall transition to the existing street to the north, and shall transition to the existing street to south, using existing and proposed curvature data. Improvements on the west side may be required for transition, alignment, and/or drainage purposes, as directed by the City Engineer. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, drainage structures, any necessary offsite improvement transition /joins to existing, street lights, pedestrian ramps, and dry and wet utilities.
Prior to improvement plan approval, the developer shall provide to the City Engineer the results of coring tests confirming that said existing pavement section has been constructed per City Standard No. MVSI-107A-0. Any missing or deficient improvements along the project's west frontage shall be constructed prior to issuance of a certificate of occupancy.

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 22

## Special Districts Division

132. Street Light Coordination/Advanced Energy Fees. Prior to the issuance of the 1st Building Permit for this project, the Developer shall pay New Street Light Installation Fees for all street lights required to be installed for this development. Payment will be collected by the Land Development Division. Fees are based on the street light administration/coordination and advanced energy fees as set forth in the City Fees, Charges, and Rates as adopted by City Council and effective at the time of payment. Any change in the project which increases the number of street lights to be installed requires payment of the fees at the then current fee. Questions may be directed to the Special Districts Administration at 951.413.3470 or SDAdmin@moval.org.
133. Major Infrastructure SFD Major Infrastructure Financing District. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for the construction and maintenance of major infrastructure improvements, which may include but is not limited to thoroughfares, bridges, and certain flood control improvements. This condition will be applicable provided said district is under development at the time this project applies for the 1st Building Permit. This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings. An alternative to satisfying this condition will be identified at such time as a special financing district has been established. At the time of development, the developer must contact Special Districts Administration at 951.413.3470 or at SDAdmin@moval.org to determine if this condition is applicable.
134. Maintenance Services Funding. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 23
annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for the operation and maintenance of public improvements and/or services associated with impacts of the development. This condition will only be applicable provided said district is under development at the time this project applies for the 1st Building Permit.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

An alternative to satisfying this funding source will be identified at such time as a special financing district has been established. At the time of development, the developer must contact Special Districts Administration at 951.413.3470 or at SDAdmin@moval.org to determine if this condition is applicable.
135. Public Safety Funding. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for Public Safety services, which may include but is not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. This condition will only be applicable provided said district is under development at the time this project applies for the 1st Building Permit.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is

## CONDITIONS OF APPROVAL

Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 24
not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

An alternative to satisfying this condition will be identified at such time as a special financing district has been established. At the time of development, the developer must contact Special Districts Administration at 951.413.3470 or at SDAdmin@moval.org to determine if this condition is applicable.
136. CFD 2014-01. Prior to City Council action authorizing the recordation of the map, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee, form an association to fund the services or fund an endowment) to provide an ongoing funding source for a) Street Lighting Services for capital improvements, energy charges, and maintenance and b) street and storm drain maintenance.

This condition must be fully satisfied prior to issuance of the 1st Building Permit. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

Alternatively, the condition can be satisfied by the Developer forming a property owner association that will be responsible for the improvements and any and all operation and maintenance costs for the improvements or by funding an endowment in an amount sufficient to yield an annual revenue stream that meets the annual obligation, as calculated by Special Districts Admin staff. The Developer must contact Special Districts Administration at 951.413.3470 or at SDAdmin@moval.org to satisfy this condition.
137. NPDES Funding. Prior to City Council action authorizing recordation of the final

## CONDITIONS OF APPROVAL

Tentative Tract Map No. 38459 (PEN22-0127)
Page 25
map for the development and if the Land Development Division requires this project to provide a funding source for the City's National Pollutant Discharge Elimination System (NPDES) program, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the balloting/annexation fee or fund an endowment) to provide an ongoing funding source for the NPDES program. This condition must be fully satisfied prior to issuance of the 1st Building Permit. This condition will be satisfied with the successful special election process into the NPDES program, or other special financing district, and payment of all costs associated with the special election process. Participation in the NPDES program requires an annual payment of the annual special tax, assessment, rate or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the City Council action to consider the ballot/annexation into or formation of the district, the qualified elector(s) will not protest the ballot/annexation or formation, but will retain the right to object to any eventual tax/assessment/rate/fee that is not equitable should the financial burden of the tax/assessment/rate/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings. (City of Moreno Valley Municipal Code Title 3, Section 3.50.050). Alternatively, the condition can be satisfied by the Developer funding an endowment in an amount sufficient to yield an annual revenue stream that meets the annual obligation, as calculated by Special Districts Admin staff. The Developer must contact Special Districts Administration at 951.413 .3470 or at SDAdmin@moval.org to satisfy this condition.
138. Park Maintenance Funding. Prior to City Council action authorizing the recordation of the map, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or fund an endowment) to provide an ongoing funding source for the continued maintenance, enhancement, and/or retrofit of parks, open spaces, linear parks, and/or trails systems.

This condition must be fully satisfied prior to issuance of the 1st Building Permit. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special

## CONDITIONS OF APPROVAL

Page 26
election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

Alternatively, the condition can be satisfied by the Developer funding an endowment in an amount sufficient to yield an annual revenue stream that meets the annual obligation, as calculated by Special Districts Admin staff. The Developer must contact Special Districts Administration at 951.413.3470 or at SDAdmin@moval.org to satisfy this condition.
139. The ongoing maintenance of any water quality BMP (e.g. Bioswale) constructed in the public right of way shall be the responsibility of a property owner association or the property owner.
140. Maintenance Responsibility. The ongoing maintenance of any landscaping required to be installed behind the curb shall be the responsibility of the property owner.
141. Zones $A$ and $C$. The parcel(s) associated with this project is included in Moreno Valley Community Services District Zone A (Parks \& Community Services) and Zone C (Arterial Street Lighting). Zone A is levied on the property tax bill on a per parcel or dwelling unit basis. Zone $C$ is levied on the property tax bill on a per parcel basis. Zone $A$ and Zone $C$ are levied against all assessable parcels, and any subdivision thereof.

## Transportation Engineering Division

142. All project driveways shall conform to City of Moreno Valley Standard Plans No. MVSI-111A-0 for residential driveway approaches.
143. Box Springs Road is designated as a Minor Arterial (88'RW/64'CC). Any modifications or improvements undertaken by this project shall be consistent with City Standards or as approved by the City Engineer.
144. Street "A" shall be improved as a modified Local Street ( 56 'RW/36'CC) per City Standard Plan No. MVSI-107A-0. Any improvements undertaken by this project shall be consistent with City Standards or as approved by the City Engineer. A landscaped, raised median shall be installed on Street "A" such that sight distance is not obstructed. Appropriate signage shall be installed to clearly indicate the direction of travel.
145. Street "B" and Street "C" shall be improved as Local Streets ( 56 'RW/36'CC) per City Standard Plan No. MVSI-107A-O. Any improvements undertaken by this project shall be consistent with City Standard.

CONDITIONS OF APPROVAL
Conditional Use Permit (PEN21-0066)
Tentative Tract Map No. 38459 (PEN22-0127)
Page 27
146. Conditions of approval may be modified or added if a phasing plan is submitted for this development.
147. Prior to final approval of any landscaping or monument sign plans, the project plans shall demonstrate that sight distance at the project driveways conforms to City Standard Plan No. MVSI-164A, B, C-0.
148. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per California Manual on Uniform Traffic Control Devices (CAMUTCD) and City of Moreno Valley Standard Plans - Section 4 for all streets within the project area. The signing and striping plan shall include a pedestrian crossing to the satisfaction of the City Traffic Engineer for Street "B:, between Street "A" and Street " C ", as shown on the approved exhibits.
149. Prior to issuance of an encroachment permit for works within the public right-of-way, construction traffic control plans prepared by a qualified, registered Civil or Traffic engineer shall be required for plan approval by the City Traffic Engineer.
150. Prior to issuance of the first building permit, the Developer shall coordinate with the City of Riverside Public Works Department and purchase the necessary traffic signal appurtenance equipment for the improvement, as identified in the Gateway Heights Traffic Study, dated February 12, 2021, at the intersection of Sycamore Canyon Road and Fair Isle Drive.
151. Prior to acceptance of streets into the City-maintained road system, all approved signing and striping shall be installed per current City Standards and the approved plans.

### 1.0 PURPOSE

The purpose of this Planned Unit Development (PUD) is to describe the overall design concept for the Gateway Heights project and outline the design details that will be incorporated into the final design decisions. The Gateway Heights project presents innovative housing options within the City of Moreno Valley, while delivering a vast amount of recreational open space to the surrounding communities. This manual includes both design standards and guidelines. The guidelines in this document will lay out both functional and aesthetic design concepts as an overall strategy to be followed at the time of development. The primary objective is to establish a consistent theme throughout the project. This document will establish design standards, overall theme, wall and fence concepts, and pedestrian connectivity to be used in the future build out of this project. This Planned Unit Development (PUD) is being processed in conformance with City of Moreno Valley Municipal Code, Chapter 9.03.060.

### 2.0 PROJECT BACKGROUND \& DESCRIPTION

Gateway Heights is located north of Jennings Court and east of Morton Road in the City of Moreno Valley (Refer to Exhibit A - Vicinity Map). The property contains 32.70 acres in the foothill of the Box Springs Mountain Reserve Park. The project proposes to develop approx. 16.59 acres of 32.56 acres into 108 detached condominium units with the dwelling units in an 8-unit "cluster" concept. (See Exhibit B Development Area) The remaining 15.97 acres will be rezoned to Open Space (OS). It is anticipated that the open space area will be incorporated into the local trail system of hiking, trail running, and mountain biking trails, and the open space area will be available for recreational use by residents of Gateway Heights and the City of Moreno Valley. The project will also contain 3.1 acres of open space, trails and park area within the community providing residents with space to enjoy. The project proposal is consistent with the City of Moreno Valley's Residential 10 (R10) District which allows for a maximum density of 10 dwelling units per net acre. In order to ensure the quality and cohesiveness of PUD projects, the City of Moreno Valley requires additional design details during planning stages. The requirement for these design standards and details helps ensure that City design objectives are met. By implementing the following design points, this project meets these City design objectives for PUDs:

- Provides innovation and diversity in housing choices that would not otherwise be possible according to the strict application of the site development regulations in this title because the detached condominium concept provides its residents with the benefits of single-family homeownership while also conferring on them the benefits of shared community living.
- Provides access to adjacent natural resources, open space, onsite recreational facilities through the dedication of nearly one-half of the property to open space that will interconnect with a regional trail system.
- Installation of storm water pollution control systems pursuant to the municipal storm water permit issued by the Regional Water Quality Control Board (RWQCB).

### 3.0 EXISTING CONDITIONS

The property is currently unimproved land bordered to the south by an existing single family residential development. The site lies just to the east of Interstate 215 and to the north of the US 60/I-215 interchange. The site had previously been entitled for a single-family residential development (Tract 33626) in 2007 but those entitlements expired.

The topography of this site has two naturally defined areas. The lower lying area, which generally contains slopes under $15 \%$ and the mountainous area which consists of slopes greater than $25 \%$. The site generally slopes from northeast to southwest (See Exhibit C - USGS Topographic Map). The property is located within Flood Zone ' $X$ ' (areas determined to be outside of the 100-year and 500-year floodplain) Refer to Exhibit D - FIRM Map (Map No. 06065C0733G, dated August 28, 2008).

Per the General Plan, the property currently has land use designations of Residential Max 2DU/AC (R2) and Hillside Residential (HR). (Refer to Exhibit E-General Plan Map and Exhibit F - Zoning Map)

Transportation corridors and area circulation will be developed in conformance with the City of Moreno Valley's General Plan. Refer to Exhibit G - Area Circulation Map for a representation of the major roadways in the areas of the subject site.

### 4.0 RELATIONSHIP TO SURROUNDING PROPERTIES

The surrounding properties in the area include vacant land, existing single-family homes, and hillside. A majority of the vacant land adjacent to this project are contained within the Gateway Center Specific Plan, in the unincorporated area of Riverside County, to the west of the project. This Specific Plan contains densities from 5 du /acre to 16 du /acre as well as a school site bordering Morton Road to the west. (See Exhibit H - Gateway Specific Plan) To the north and east are areas zoned as Hillside Residential in the City of Moreno Valley and Conservation in the County of Riverside, to the east and south of the project there are eight existing single-family homes. (See Exhibit I - Surrounding Jurisdictions)

The surrounding General Plan land use designations are as follows:
North: Hillside Residential (HR) \& Conservation (County of Riverside)
South: Residential Max. 5du/acre (R5)
East: Hillside Residential (HR)
West: Gateway Center Specific Plan (County of Riverside)
The surrounding existing land uses are as follows:
North: Vacant
South: Single Family Residences
East: Vacant
West: Vacant

### 5.0 PRELIMINARY DEVELOPMENT PLAN

The Gateway Heights development is intended as a planned residential community offering innovative cluster housing options in the lower lying portion of the site and open space on the remainder of the site. The development will include a community park, open space and a common community design identity. This development plan coupled with the unique location of this property will provide multiple housing alternatives for both entry-level buyers, young families, and retirees, as well as student and faculty for the University of California-Riverside.

As mentioned above, the R10 designated area of Gateway Heights will be clustered on 16.59 acres of the property and will contain 108 units located near the center of the development area. This gives the property a density of 3.37 units per acre with a clustered density of 6.51 units per acre. This density is well within allowances of the proposed General Plan designation of R10 (10 units per net acre). The remaining 15.97 acres will be changed to Open Space (OS) and designated for conservation. In addition to the open space, the project will also provide a 0.89 acre community park located in the center of the development. (Refer to Exhibit J - Open Space/Park Plan)

The residential uses within the Gateway Heights development will consist of cluster units in varying sizes ranging from 4 -unit to 10 -unit clusters. This development will be subject to the requirements in Chapter 9.03.040 (Residential Site Development Standards) and 9.03.060 (Planned Unit Developments) of the City of Moreno Valley's municipal code.

### 5.1 Cluster Design

These units will contain 4-unit to 10 -unit auto court product on pad sizes ranging from 7,674SF to 16,254 SF. (Refer to Exhibit K - Cluster Detail) These cluster units are arranged with garages facing a common driveway as to enhance the aesthetic views of the project from the street and perimeter. The purpose of this design concept is to ensure architectural continuity and compatibility throughout the project utilizing the following design criteria:
> Provide front door access to open space/courtyard for inside units and street access for outside units.
> Provide garage access at common private street
> Use enhanced elevations for homes facing the public street.
> Provide patios or balconies to enhance architectural styles and increase private open space.
> Consider additional building articulation through recessed garage doors, recessing or cantilevering second stories and varying roof pitches.

## (Refer to A-1.3 thru A-3.4 - Conceptual Floor Plans/Elevations)

### 5.2 Alternative Design Standards

This planned unit development for the Gateway Heights project contains various design alternatives that differ from the standard R10 design standards in order to promote the objectives stated above in Section 2. As allowed in the City of Moreno Valley's Municipal Code Section 9.03.060.G, planned unit developments may deviate from the site development standards set forth in the applicable zoning district regarding lot area, lot dimensions, lot coverage, setbacks and building height.

### 5.2.1 Lot Coverage

The Gateway Heights project contains 13 development pad areas varying in size from 7,674 to 16,254 square feet. The cluster development will be exclusively contained within these development pads and the pads will have a maximum building coverage of $65 \%$. The remaining pad area shall contain driveways, sidewalks and landscaping.

### 5.2.2 Building Setbacks

Front/Street Side setback = 5' to ROW
Minimum building separation $=6^{\prime}$
Side setback to toe/top of slope $=5^{\prime}$ Min*
Rear setback to toe/top of slope $=5^{\prime} \mathrm{Min} *$
*-For buildings located at the top or toe of slope, the minimum building setback shall be determined by the California Building Code Section 1808.7 which states that buildings at the toe of slope shall be at least the smaller of $\mathrm{H} / 2$ or $15^{\prime}$ from the toe of slope. Buildings at the top of slope shall be at least the smaller of $\mathrm{H} / 3$ or $40^{\prime}$ from the top of slope.

Example: 20' Slope Height = 10' setback at toe of slope (20/2)
$20^{\prime}$ Slope Height $=7$ ' setback at top of slope $(20 / 3)$

For SI: 1 foot $=304.8 \mathrm{~mm}$.
FOUNDATION CLEARANCES FROM SLOPES

### 5.2.3 Building Height

Building heights for the two story units will not exceed $30^{\prime}$ in height.

### 5.2.4 Street Sections

The streets within the Gateway Heights PUD will be private streets maintained by the project's Homeowner Association. These streets will be constructed based on the City of Moreno Valley's Local Street section MVSI-107A-0. Street A and Street C will be constructed using a modified section which eliminates the sidewalk and landscape area along the project perimeter. The purpose for these modified sections is to preserve the natural landscape along the perimeter of the project. With the elimination of these sidewalks, a pedestrian crossing has been located at approximately mid-block of Street B to provide ADA access to the units on the north side of Street B. (Refer to Exhibit L Street Section Details)

TABLE 1

| GATEWAY HEIGHTS DEVELOPMENT STANDARDS |  |
| :---: | :---: |
| Max Building Height | $30^{\prime}$ |
| Min Front/Street Setback | $5^{\prime}$ |
| Min Bldg seperation | $6^{\prime}$ |
| Min. Side setbacks | $5^{\prime *}$ |
| Min. Rear setbacks | $5^{\prime *}$ |
| Max Development Pad Coverage | $65 \%$ |

### 5.3 Fire Protection Plan

The Gateway Heights project has developed a Fire Protection Plan in conjunction with the development to increase safety measures and mitigate any fire hazards for the project. The mitigations include providing two $36^{\prime}+$ wide roadways at the entrance to minimize any potential traffic congestion during an emergency setting. One roadway would be used for ingress and the other for egress. The site also includes an internal looped road system allowing traffic circulation in either direction. Direct access shall be provided to all structures and no dead-end fire apparatus access roads are contained onsite. The project has also developed a Preliminary Fuel Modification and Vegetation Management plan for the site which includes requirements for landscape materials to reduce non-fire-resistant vegetation. (Refer to Appendix 1) A Final Fuel Modification Plan will be required as part of the Final Design submittals for approval prior to obtaining a Grading Permit.

### 5.4 Community Park \& Landscape Buffers

This project will contain a community park space area, approximately 0.89 acres in size and with various elements for recreation. This community park will be located near the center to the subdivision allowing easy access to all residents. This park space may contain amenities such as BBQ and picnic areas, ramadas, tot lot, dog park and turf areas for additional gathering and activities. The park will be owned and maintained by the project's Homeowners Association. In addition to the community park, this project will also incorporate landscaped buffer areas throughout the project and along the project's perimeter. These landscape areas will also be maintained by the Homeowners Association and subject to the requirements of the Fire Protection Plan.

### 5.4.1 General Guidelines

$>$ All landscape shall conform to Ordinance No. 859.2 and County of Riverside Guide to California Friendly Landscaping.
> All planting areas shall be irrigated with an automatic irrigation system and an ET based controller, per Ordinance 859.2.
> All planting areas shall receive three inches ( $3^{\prime \prime}$ ) of shredded bark mulch and one and a half inches ( $1-1 / 2^{\prime \prime}$ ) on ground cover from flats.
$>$ All trees within six feet $\left(6^{\prime}\right)$ of any hardscape shall receive thirty-six inch ( $36^{\prime \prime}$ ) deep, by twenty inch (20") long linear root barrier.
$>$ All slopes three feet ( $3^{\prime}$ ) in vertical height or greater shall be planted with shrubs and trees and irrigated per the Riverside County requirements for slope erosion control landscaping. Slopes to meet building and safety requirements.
$>$ Landscaping shall consist of a combination of trees, shrubs and groundcover as listed in the California Friendly Plant List provided by the County.

### 5.5 Entry Monuments, Walls \& Project Theme

The primary entry for the community will be located at the intersection of "Street A" and Morton Road. The elevated topography of the Gateway Heights project will make it a predominant development near the I-215 freeway. As such, it is important to minimize the walls and fences that could impact the views from the street or surrounding areas. The Gateway Heights project will contain no walls on the interior of the project. The perimeter of the project will consist of decorative view walls and/ or tubular steel fencing. Perimeter wall and fence materials, designs, and colors will carry on the project's theme established by the project's monument signage and landscaping. Wall and fence heights will be limited to a maximum height of six (6) feet, except where necessary for noise attenuation or additional retaining wall. Decorative pillars and pedestals may extend up to an additional fourteen (14) inches above the maximum wall or fence heights. (Refer to Exhibit M - Conceptual Wall \& Fence Plan) Materials, colors, and construction methods for theme, view and accent walls are
subject to some variation, so long as the proposed character and theme of the walls is preserved and per the approval of the Planning Department.
While in some areas of the development, units may have retaining walls the majority of the development will not be separated by neighborhood walls at the rear or side yards.

### 5.5.1 General Guidelines

$>$ All walls and fences should maintain a six foot ( $6^{\prime}$ ) maximum height limit, except where larger walls are necessary for noise attenuation or retaining purposes.
$>$ If walls or fences end in a pilaster, the design of the pilaster should reflect the shape of the supports used in the entry monuments and use similar materials.
$>$ When changes in pad elevation occur, the wall or fence should be stepped in equal vertical intervals.
$>$ Where gates are required, they shall be constructed of wrought iron, vinyl or tubular steel. Chain link fencing is not permitted. All construction must be of good quality and sufficient durability. (Applicants shall provide specifications which shall be approved by the Planning Department)
$>$ All wall and fence plans and materials must conform to City of Moreno Valley guidelines.

### 5.6 Perimeter Yard Landscaping

Perimeter yard landscaping is required around all cluster pads and unless approved by the Planning Department, will be provided by the developer/home builder. Perimeter yard landscaping provided by the developer/builder or their representative must be installed within one month of closing of the first unit. A variety of perimeter yard landscape packages with automatic irrigation systems shall be provided; landscaping designs with berming, river run features, courtyards, lighting, or other creative features shall be offered for standard landscape design.

### 5.7 Private Open Space

Private Open Space may include land within each residential unit that is available for private use. This private open space is typically considered yard, patio or balcony area that is available for private recreation. It is recognized that while the community park provides an easily accessible active recreational opportunity for all residents of the development, each residence must have adequate private outdoor space that can be an effective extension of the indoor living space and be used for passive outdoor activities such as gardening, reading, eating and barbequing. Per Moreno Valley Municipal Code Section 9.03.040.G.8, each unit shall have at least one

Figure 1 - Galvanized steel rock garden wall hundred and fifty (150) square feet of private open space. This open space may be achieved through the use of patio or balcony spaces. First floor patio space shall have a minimum dimension of $8^{\prime}$ and upstairs balconies must have a minimum dimension of 5'. Patio designs may include alternatives to traditional fencing, such as garden walls, small retaining walls or landscaping which delineates the space between units.

### 6.0 ARCHITECTURE

The architectural guidelines in this manual have been developed to ensure architectural continuity and compatibility throughout the project; to promote a distinctive architectural theme; and to avoid a mundane repetition of too similar architectural design elements. These guidelines will provide a set of basic concepts for development but are not meant to limit future creativity in design.

These styles and concepts should be incorporated to provide a variety of quality housing types.

### 6.1 General Guidelines

The following general guidelines should be considered in the designing and layout of the project:
> A common set of design style and design elements should be included throughout the project.
> Long unarticulated building facades should be avoided
> Natural building materials should be varied throughout the project, avoiding long stretches of similar street scene
> Offset roof planes, columns, vertical and horizontal articulation or other projecting architectural features shall occur on those facades of the residence that are visible from the street or open space
> The visual impact of garages shall be reduced to the maximum extent practicable

### 6.2 Architectural styles

Two architectural styles have been set forth as examples in this document to begin to identify and illustrate the intent and objective of these design guidelines in terms of architectural style and variety. Santa Barbara and Modern Farmhouse architectural styles are discussed in the following pages and depicted in Figures $\mathbf{1} \& 2$ to establish the types and level of architectural detail which will assist in achieving the project design objectives. Discussions of each of these styles as well as illustrations of typical elevations and features are located on the following pages.

### 6.2.1 Santa Barbara

Santa Barbara style is an architectural and interior design style derived from Mediterranean and Spanish-revival architecture, often characterized by deep red tones and polished wood textures that contrast with stark white walls.
Santa Barbara style architecture and interior design are characterized by white stucco walls, exposed beam ceilings, red-tile roofs and floors, arcades, and courtyards.

Figure 1 - Santa Barbara

Features typical of the Santa Barbara style include:
o White stucco walls
o Exposed beam ceilings
o Tile roofs
0 Shutters
o Decorative Vents

### 6.2.2 Modern Farmhouse

The Modern farmhouse style combines practical elements (simple floor plan, white walls) with rustic materials (wood floors, hand-hewn beams, and wrought-iron hardware). And you'll see this style throughout the U.S., with regional variations. For example, you might spot a Dutch door or two in a New England farmhouse, or wraparound porches on homes in the Deep South

Features typical of the Modern Farmhouse style include:
o Reclaimed wood
o Barnboard details
o Wrought iron accents
o Wide plank floors
o Rafter Tails
o Stone Veneers

Figure 2 - Modern Farmhouse

### 7.0 UTILITIES

Currently the site is undeveloped and the site does contain some existing overhead electrical lines as well as water and sewer lines located in Morton Rd. All existing and new onsite utilities that will serve the subject site will be placed underground except as approved by Public Works. Operation and maintenance of all utilities and facilities will be managed by the appropriate operating entity upon approval and completion of construction. Sewer facilities, water facilities, streetlights, and fire hydrants will be provided according to the appropriate agency's guidelines, per the recommendations of Public Works and City of Moreno Valley Fire Departments and other governmental regulations applicable to the construction of various facilities.

### 8.0 COVENANTS, CONDITIONS AND RESTRICTIONS (CC\&R’S)

Table 8-1 below details the maintenance responsibilities for the various utilities and common areas within Gateway Heights. A majority of the common areas will be maintained by a Home Owners Association (HOA). The HOA will be established in conjunction with development of the project. CC\&R's for Gateway Heights that include language for the establishment of a HOA and provisions for creation of liens in conjunction with the HOA, for maintenance funding, will be provided prior to recordation of the final map.

| MAINTENANCE RESPONSIBILITY |  |  |  |  |  |

## APPENDIX 1

## FIRE PROTECTION TECHNICAL REPORT

MAIN OFFICE
605 THIRD STREET
ENCINITAS, CALIFORNIA 92024
T 800.450.1818 F 760.632.0164

## TECHNICAL FIRE PROTECTION MEMORANDUM

| To: | Douglas Bloom, Fire Marshal, Moreno Valley Fire Department |
| :--- | :--- |
| From: | Dudek Fire Protection Planning Team, Michael Huff, Director |
| Subject: | Gateway Heights Project Fire Hazard Analysis and Approach |
| Date: | 01/30/2023 |
| cc: | Jason Ackerman, Esq., Ackerman Law |
| Attachment(s): | Figures 1-2 |
|  | Attachment 1 - Site Aerial Photograph |
|  | Attachment 2 - Fuel Modification Plan |
|  | Attachment 3 -- Site Plan with Revised Dual Project Access |

This Technical Fire Protection Memorandum documents fire protection planning related to project constraints analysis for the subject project. The approach outlined herein responds to your recommended direction during several meetings and communications regarding the site and its required fire protection features, including emergency ingress/egress to/from the project site and defensible space areas.

## Project description

The proposed Gateway Heights development is a 108 unit detached townhouse project on an approximately 33acre site in the City of Moreno Valley.

- "Detached townhouses" (townhouses by CBC definition are attached; structures are likely to be considered SFDs per code ${ }^{1}$ )
- Structures are separated 6' apart.
- Structures are two-story townhouses
- Proposed 16-acre open space lot north of the developed project site

[^16]
## Existing Site Observations

## Onsite

- Attachment 1 provides a site aerial photograph.
- Vegetation is primarily scattered sage scrub, forbs, and scattered native shrubs and a few ornamental trees in the northeast corner;
- Unmaintained roads/trails traverse the property;
- Evidence of recent fuel reduction activities are present on site.

## Topography

The project site is relatively flat, with a slight upslope gradient to the north; beyond the project to the north is a steep, rocky hillside with sparse scrub and forb vegetation. To the west and south the terrain has gently rolling hills with intermittent drainages. Along the eastern edge of the property is a drainage channel strewn with boulders. To the east of the project is a residential subdivision.

## Vicinity

The project is located in the northeast area of the City of Moreno Valley. The western and northern property lines coincide with the city limits; the lands immediately to the west and north of the property are within unincorporated Riverside County.

- North: open space;
- East of northern open space lot: open space;
- Southeast of project site: residential development;
- West: open space.

## Proposed site plan review / code compliance issues

## Issues to address:

- Driveway lengths: proposed lengths are all less than 150 feet in length and are $24^{\prime}$ wide.
- Hose pull distances: will be greater than 150 ' distance to two or more units along the driveways for Pads 2,5, 7 and 9 through 13. However, the fire code official is authorized to increase the 150 -foot distance since all units will be equipped throughout with automatic fire sprinkler systems. ${ }^{2}$
- Fuel modification width: 100 -foot FMZ can be provided for most units (Attachment 2). The western most units on Pad 13 (NW corner) are 30 feet from the property line; the units on Pad 7 are 69 feet from the property line; The proposed FMZ reduction has been mitigated with placement of non-combustible walls along the property line adjacent to these two buildings as depicted in Attachment 2.

## Primary access

Primary access is proposed using Morton Road on the southern side of the project, which has access to Box Springs Road and the SR60/l-215 Freeway.

## Secondary access

In reviewing the Moreno Valley Fire Code, there is no reference identified whereby a secondary access is required for the project. CFC 503.1.2 authorizes the fire code official to require more than one access road based on the potential for impairment of a single road, but it does not require that an additional access road must be provided.

The project design provides two 36 ' foot wide roadways at the entrance to minimize any potential traffic congestion during an emergency setting; one for ingress and one for egress (see Attachment 3). Each entrance roadway connects to separate "legs" of the internal circulation loop road allowing for approximately half of the occupants to exit in each of two distinct directions without conflict. Based on discussions with the FD, the proposed loop road design with a dual widened roadway entrance meets the intent of the code and will be accepted.

## Internal circulation

- Loop road system;
- Direct access is provided to all structures;
- Unobstructed internal circulation loop roadway width of 24 feet;

## Fuel modification and Vegetation Management

A preliminary fuel modification landscape plan has been prepared and submitted for review and approval.
The two "legs" of the internal circulation loop road, along the eastern and western edges of the project, will be located between the property line and structures providing a paved, non-combustible, defensible space as part of the fuel modification zone.

The project will also comply with the following requirements related to fuel modification and vegetation management outlined in the 2022 California Fire Code. The Project-provided fuel modification landscape plan provides additional details on the Project's consistency with these requirements and has been submitted for review

[^17]to Moreno Valley Fire Department (MVFD). Fencing, decking and/or mulch will be consistent with requirements for fire hazard severity zones and WUI areas, specifics of which will be included in the project's landscape plan and will be to MVFD approval.

## CFC 4903.2.1.2 Final Fire Protection Plan and Ongoing Maintenance

The project HOA is legally responsible for the maintenance of Fuel Modification Zones. HOA maintenance responsibilities concerning Fuel Modification Zones will be incorporated into the HOA's covenants, conditions, and responsibilities (CC\&Rs) to the approval of the MVFD.

CFC 4906.1 General

Planting of vegetation for new landscaping shall be selected to reduce non-fire-resistant vegetation in proximity to a structure and to maintain vegetation as it matures.

## CFC 4906.2 Application

All new plantings of vegetation in State Responsibility Areas (SRA) and Local Responsibility Areas (LRA) designated as a Very High Fire Hazard Severity Zone shall comply with Sections 4906.3 through 4906.5.3.

## CFC 4906.3 Landscape Plans

Landscape plans shall be provided when required by the enforcing agency. The landscape plan shall include development and maintenance requirements for the vegetation management zone adjacent to structures and roadways, and to provide significant fire hazard reduction benefits for public and firefighting safety.

## CFC 4906.3.1 Contents

Landscape plans shall contain the following:

1. Delineation of the 30 -foot ( 9144 mm ) and 100 -foot $(30.5 \mathrm{~m})$ fuel management zones from all structures.
2. Identification of existing vegetation to remain and proposed new vegetation.
3. Identification of irrigated areas.
4. A plant legend with both botanical and common names, and identification of all plant material symbols.
5. Identification of ground coverings within the 30 -foot ( 9144 mm ) zone.

## CFC 4906.4 Vegetation

All new vegetation shall be fire-resistant vegetation in accordance with this section.
Exception: Trees classified as non-fire-resistant vegetation complying with Section 4906.4.2.1.
To be considered fire-resistant vegetation, it must meet at least one of the following:

1. Be identified as fire-resistant vegetation in an approved book, journal or listing from an approved organization.
2. Be identified as fire-resistant vegetation by a licensed landscape architect with supporting justification.
3. Plants considered fire-resistant vegetation and approved by the local enforcing agency.

## CFC 4906.4.1 Shrubs

All new plantings of shrubs shall comply with the following:

1. Shrubs shall not exceed 6 feet ( 1829 mm ) in height.
2. Groupings of shrubs are limited to a maximum aggregate diameter of 10 feet ( 3048 mm ).
3. Shrub groupings shall be separated from other groupings a minimum of 15 feet ( 4572 mm ).
4. Shrub groupings shall be separated from structures a minimum of 30 feet ( 9144 mm ).
5. Where shrubs are located below or within a tree's drip line, the lowest tree branch shall be a minimum of three times the height of the understory shrubs or 10 feet ( 3048 mm ), whichever is greater.

## CFC 4906.4.2 Trees

Trees shall be managed as follows within the 30 -foot ( 9144 mm ) zone of a structure:

1. New trees shall be planted and maintained so that the tree's drip line at maturity is a minimum of 10 feet ( 3048 mm ) from any combustible structure.
2. The horizontal distance between crowns of new trees and crowns of adjacent trees shall not be less than 10 feet ( 3048 mm ).
3. Existing trees shall be trimmed to provide a minimum separation of 10 feet ( 3048 mm ) away from chimney and stovepipe outlets per Title 14, Section 1299.03.

CFC 4906.4.2.1 Non-Fire-Resistant Vegetation

New trees not classified as fire-resistant vegetation, such as conifers, palms, pepper trees and eucalyptus species, shall be permitted provided the tree is planted and maintained so that the tree's drip line at maturity is a minimum 30 feet ( 9144 mm ) from any combustible structure.

## Defensible Space

The project will comply with the following defensible space requirements outlined in the 2022 California Fire Code.

## CFC 4907.1 General

Hazardous vegetation and fuels shall be managed to reduce the severity of potential exterior wildfire exposure to buildings and to reduce the risk of fire spreading to buildings as required by applicable laws and regulations. Defensible space will be managed around all buildings and structures in State Responsibility Areas (SRA) as required in Public Resources Code 4291.

## CFC 4907.2 Application

Buildings and structures located in the following areas shall maintain the required hazardous vegetation and fuel management:

1. All unincorporated lands designated by the State Board of Forestry and Fire Protection as a State Responsibility Area (SRA).
2. Land designated as a Very High Fire Hazard Severity Zone by the Director.
3. Land designated in ordinance by local agencies as a Very High Fire Hazard Severity Zone pursuant to Government Code Section 51179.

## CFC 4907.3 Requirements

Hazardous vegetation and fuels around all buildings and structures shall be maintained in accordance with the following laws and regulations:

1. Public Resources Code, Section 4291.
2. California Code of Regulations, Title 14, Division 1.5, Chapter 7, Subchapter 3, Article 3, Section 1299.03.
3. California Government Code, Section 51182.
4. California Code of Regulations, Title 19, Division 1, Chapter 7, Subchapter 1, Section 3.07.

## Relevant code sections:

Chapter 7A of the 2022 California Building Code
All new Project buildings will comply with the ignition resistant construction requirements of California Building Code Chapter 7A. Per Chapter 7A, buildings located in any Fire Hazard Severity Zone or any Wildland-Urban Interface (WUI) Fire Area designated by the enforcing agency constructed after the application date shall comply with Chapter 7A provisions. This includes all new buildings with residential, commercial, educational, institutional or similar occupancy type use, which are referred to as "applicable building(s)" (see definition in Section 702A), as well as new buildings and structures accessory to those applicable buildings

The Project's buildings will comply with the following construction and materials requirements identified in the following sections:

- 704A Ignition Resistant Construction
- 705A Roofing
- 706A Vents
- 707A Exterior Covering
- 708A Exterior Windows, Skylights and Doors
- 709A Decking
- 710A Accessory Buildings and Miscellaneous

California Residential Code R337. Materials and Construction Methods for Exterior Wildfire Exposure

Minimum standards for a new building located in a WUI area to resist the intrusion of flame or burning embers projected by a vegetation fire.

California Residential Code R337.1.4. Inspection and Certification.

The local building official shall, upon completion of construction, provide the owner or applicant with a copy of the final inspection report that demonstrates the building was constructed in compliance with all applicable state and local building standards, including those for materials and construction methods for wildfire exposure as described in this chapter. Issuance of a certificate of occupancy by the local building official for the proposed building shall be considered as complying with this section.

California Fire Code 503.1.2 Additional access.

Authorizes the fire code official to require more than one access road based on the potential for impairment of a single road, but it does not require that an additional access road must be provided.

## Moreno Valley Fire Code Amendments

- 503.2.1 Fire apparatus access roads - 24 feet wide
- 903.2 Single Family Dwellings shall have automatic fire sprinkler systems
- 4906.4 Fuel Modification Requirements for New Construction. Must meet the criteria established by Riverside County Fire Department (Information Bulletin \#08-05). Submit a Fuel Modification Plan; indicate setback, irrigated and thinning zones (30’ Green Zone; 100' total defensible space).
- App B. Fire Flow and Hydrant Spacing

## Fire environment assessment

The project site's fire environment assessment was performed by Dudek fire protection planners with extensive similar experience throughout California over the last 25 years.

- The site is located within a Very High Fire Hazard Severity Zone ${ }^{3}$.
- At the time of the site assessment, there was no evidence of recent fire on site (no visible signs); fire history data ${ }^{4}$ indicates the site has had 77 fires within a five-mile radius and the site itself has burned four times since 1980 and most recently in 2001 (Watkins Fire).
- Vegetation on site and to the north, west and south is sparse and low growing, which would reduce the impacts from a wildland fire;

[^18]- Adjacent hillslopes to the north exist up and away from the project site. This reduces wildfire risks at the project site as wildfire is more likely to spread at slower rates when moving downslope compared to an upslope direction.
- The project may be subject to an approaching wildland fire from the northeast during Santa Ana wind conditions. While direct impacts from wildfire cannot be completely ruled out, structural ignition risks from ember cast are minimal given modern construction requirements in alignment with Chapter 7A of the California Building Code.

## Fire Behavior assessment

- Selected fuel models Sh1 (low load, dry climate shrub) and Sh2 (moderate load, dry climate shrub) to represent the existing vegetative fuels. Site photographs provided in Attachment 4 depict the fuels present on and adjacent to the project site.
- Selected wildland fire run scenarios from the NE and SW representing an offshore Santa Ana wind event and an onshore wind event. Santa Ana wind events represent "worst-case" conditions and represent the highest wind speeds and lowest fuel moistures likely to occur at the project site.
- Conducted fire behavior modeling using the BehavePlus 6 modeling system for existing conditions and post-development fuel modification (see results in Table 1). The location of model runs is provided in Figure 1.

Table 1. Fire Behavior Modeling Results

| Fire Scenarios | Flame Length (feet) | Fireline Intensity (BTU/feet/second) | Spread Rate (mph) | Spotting Distance (miles) |
| :---: | :---: | :---: | :---: | :---: |
| Scenario 1: 15\% slope, 40 mph NE wind |  |  |  |  |
| Fuel Model Sh1 (scrub/mustard) | 8.4 | 584 | 1.0 | 0.7 |
| Fuel Model Sh2 (scrub/mustard) | 14.1 | 1,781 | 0.8 | 0.9 |
| Scenario 1 Fuel Mod: 10\% slope, 40 mph NE wind |  |  |  |  |
| Fuel Model 8 (irrigated landscaping) | 2.6 | 46 | 0.1 | 0.3 |
| Scenario 2: 15\% slope, 20 mph SW wind |  |  |  |  |
| Fuel Model Sh1 (scrub/mustard) | 8.5 | 589 | 1.0 | 0.7 |
| Fuel Model Sh2 (scrub/mustard) | 14.1 | 1,796 | 0.8 | 0.9 |

Table 1. Fire Behavior Modeling Results

| Fire Scenarios | Flame <br> Length <br> (feet) | Fireline Intensity <br> (BTU/feet/second) | Spread <br> Rate <br> (mph) | Spotting <br> Distance <br> (miles) |
| :--- | :---: | :---: | :---: | :---: |
|  |  |  |  |  |
| Scenario 2 Fuel Mod: 15\% slope, 20 mph SW wind |  |  |  |  |
| Fuel Model 8 (irrigated landscaping) | 2.6 | 46 | 0.1 | 0.3 |

An additional assessment was conducted to determine fire behavior during a Santa Ana wind event (worst-case weather conditions) in areas adjacent to the project site using the FlamMap software package. Direct impacts from wildfire are not likely at the project site due to flame lengths less than 20 feet in adjacent lands and the planned Fuel Modification Zones.

The following paragraphs provide descriptions of the inputs used in processing the FlamMap model. In addition, data sources are cited, and any assumptions made during the modeling process are described. A graphical representation of the model results is provided in Figure 2

## Elevation

The elevation data file represents units of meters above mean sea level (AMSL). Elevations in the FlamMap analysis area range from 1,585 to 2,625 feet AMSL. Elevation data is a required input file for FlamMap runs and are necessary for adiabatic adjustment of temperature and humidity and for conversion of fire spread between horizontal and slope distances.

## Slope

The slope data file represents values in degrees of inclination from horizontal. Slope values in the FlamMap analysis area range from 0-32 degrees. The slope input file is necessary for computing slope effects on fire spread and solar radiance.

## Aspect

The aspect data file represents values in azimuth degrees. Aspect values are important in determining the solar exposure of grid cells.

## Wind and Fuel Moisture

Wind speed and fuel moisture values for the FlamMap analysis utilized the same values as those used in the BehavePlus runs for Santa Ana weather scenarios. Wind and fuel moisture data was collected from local RAWS stations (Stations 045624 (Clark) and 045617 (Beaumont)). The FireFamilyPlus 6.0 software package was utilized to analyze local RAWS station data to empirically determine Santa Ana weather
conditions representative of those which have occurred previously at the project location. Wind alignment and speeds were determined and set to 70 degrees and 40 mph respectively.

## Fuel Model

The fuel model data file was based on the 40 Scott and Burgan (2005) models and represents distinct distributions of fuel loading found among surface fuel components (live and dead), size classes, and fuel types ${ }^{5}$.

## Recommendations / Justification

Reduced/mitigated FMZs have been discussed and upon provisions for measures that provide the same practical effect, approved by the fire department. This Fire Protection Technical Report proposes the following approach and justification. The fire protection measures are evaluated to provide at least equivalent protection based on the experience of the preparers of this report.

1. Site fire environment and fire behavior is not significant. The vegetation on site and on adjacent lands is sparse - dried mustard and scattered sage. The ridge behind the project site slopes up and away from project, is covered with sparse light vegetation and rocks, which is beneficial.
2. Structures will be constructed in accordance with CRC R337 (Residential Code equivalent of CBC Chapter 7A) building codes (within FHSZ) and will include features such as ember resistant vents (baffled not just mesh).
3. FMZ will be provided around entire perimeter of the project site (see Fuel Modification Plan - Attachment 2). (Where the FMZ and Jurisdictional Delineation area overlaps along the upper portion of the southeastern property line, active fuel treatment will be conducted so as to avoid impacts. The channel is comprised of large boulders with limited vegetation and in its existing state acts as a fuel modification area.) The Project will be hardened throughout.
a. The Project shall attempt to obtain an interim off-site FMZ easement for Pads 7 and 13 so that a total of 100 feet of FMZ from the Project's structures can be achieved. The off-site FMZ would be limited to thinning/mowing of existing vegetation annually. Should the off-site easement be infeasible based on an unwilling neighbor, then alternative fire protection is proposed:
i. Wherever less than 100 feet of $\operatorname{FMZ}$ (on and off site combined) is achievable, a 6-foot tall,
[^19]Wall Justification: When buildings are set back from slopes, and a wall is placed at the property line, flames and radiant heat are deflected vertically reducing the effects of heat on the structure. If a structure cannot be setback adequately, or where the slope is less than $30 \%$, a noncombustible wall can help deflect the flames from the structure ${ }^{6}$. The duration of radiant heat impact on the exposed side of the house is also reduced. The structure setback is important to avoid heat and/or flame intersection with the structure.

Heat-deflecting landscape walls of masonry construction that are six feet in height will be incorporated at the edge of lots where FMZs are the most constrained (Pads 7 and 13). The landscape walls provide a vertical, non-combustible surface in the line of heat, fumes, and flame. Once these fire byproducts intersect the wall, they are deflected upward or, in the case where lighter fuels are encountered, they are quickly consumed, heat and flame are absorbed or deflected by the wall, and the fuels burn peaks out within a short ( 30 second2 minute) time frame ${ }^{7}$. Walls like these have been observed to deflect heat and airborne embers on numerous wildfires in San Diego, Orange, Los Angeles, Ventura, and Santa Barbara County.

Rancho Santa Fe Fire Protection District, Laguna Beach Fire Department, Orange County Fire Authority, Murrieta Fire Protection District, and others utilize these walls as alternative methods based on observed performance during wildfires. This has led to these agencies approving use of non-combustible landscape walls as mitigations for reduced fuel modification zones and reduced setbacks at top of slope. While fuel moistures vary slightly across these jurisdictions, Santa Ana wind events create similar fuel moistures across a broad geographical area due to intensive drying of fuels. Therefore, this mitigation is also justified within the MVFD. These walls are consistent with NFPA 1144 Standard for Reducing Structure Ignition Hazards from Wildland Fire - 2008 Edition, Section 5.1.3.3 and A.5.1.3.3 and International Urban Wildland Interface Code (ICC 2012). NFPA 1144, A.5.1.3.3 states: "Noncombustible walls and barriers are effective for deflecting radiant heat and windblown embers from structures." These walls and barriers are usually constructed of noncombustible materials (concrete block, bricks, stone, stucco) or earth where 30 feet ( 9 meters) of defensible space is not available.
ii. Those units on the west side of the Project that are unable to provide 100' FMZ will be developed at a later date as Phase II after the adjacent development (Gateway Center) has removed the existing native vegetation as part of their grading phase.
4. Provide FMZ inspections annually. Inspections will be performed by RCFD or, at their preference, the Project would fund inspections by a $3^{\text {rd }}$ party to their satisfaction. This measure will ensure that the FMZ is functioning as intended.
5. Identify and mark fire lane and/or no parking areas as required.

[^20]6. Provide enlarged turns at both internal loop roadway turns.
7. Dual pane (both panes) tempered glass for openings on exposed sides of the structures on Pads 7 and 13.
8. Loop internal road system with two 36-foot wide, multi-lane, physically separated ingress/egress roadways.
9. Hardening at Project access point via pavement and landscaping.
10. Fire access points at the terminus of each driveway along the north side of Project for firefighting. Additionally, the area behind the northeast side of the project includes a 10-to-12-foot flat area that will be available to pedestrian firefighters via the provided accesses at the end of each driveway in that area.

## Summary

The structures will be constructed following CRC R337 and CBC Chapter 7A requirements to ensure reduced ignition potential. In addition, hardening of the structures including enhanced vents and enhanced glazing requirements will be included on selected units as noted above and a noncombustible landscape wall will be placed to mitigate FMZ reductions.

The internal circulation provides the necessary access to all structures with fire department turnarounds required for any driveway greater than 150 feet. The minimum roadway width of 36 feet meets the requirements for buildings less than 30 feet in height. Hydrants will need to be installed within the project site.

The primary access off Morton Road has been enhanced to include two 36' wide physically separated roadways for ingress and egress to reduce traffic congestion during emergencies, by providing dedicated ingress and egress routes.

## Attachment 1 Site Aerial Photograph

## Photo log

Gateway Heights - Moreno Valley

Aerial view of Project site. Land cover on site is disturbed, grassland, with minimal shrubs. Slopes to the north/ northeast are sparsely vegetated with heavy rock outcrop ground cover. East/ southeast includes large property single family homes. Land to the west is vacant and planned for development. Morton Road is directly to the west/ southwest.

# Attachment 2 Fuel Modification Plan 

## Attachment 3 Revised Site Plan Including Two Separate Ingress/Egress Roads

## Attachment 4 Site Photographs

Photograph 1: Photograph taken from Morton Road looking northeast at the project site showing on and offsite fuels and adjacent hillslopes that exists up and away from the project site. Rock outcroppings covering the hillslope reduce wildfire hazard by taking away burnable fuels.

Photograph 2: Photograph taken from the western edge of the project site looking east. On-site fuels are low load and comprised of short shrubs and annual grasses.

Photograph 3: Photograph taken from the northern boundary of the project site looking west picturing adjacent shrub and grass fuels and electrical transmission line. Spacing between vegetation decreases wildfire spread.

Photograph 4: Photograph taken from northeastern boundary of project site showing shrub and grass fuels in addition to adjacent trees and rock outcroppings. Fuel loads are highest along the project site's northern boundary.

Total project area: 32.8 acres. Plants to be chosen from County of Riversisede Calioforini friencolly Plant List

## PLANNING COMMISSION

## STAFF REPORT

Meeting Date: June 8, 2023
GENERAL PLAN AMENDMENT, CHANGE OF ZONE, CONDITIONAL USE PERMIT FOR A PLANNED UNIT DEVELOPMENT, AND TENTATIVE TRACT MAP NO. 38459 FOR A 108-UNIT CONDOMINIUM DEVELOPMENT

| CEQA: | Adopt Initial Study/Mitigated Negative Declaration and Mitigation <br> Monitoring and Reporting Program. |

## SUMMARY

The applicant, Shizao Zheng (HengHou Group), is requesting approval of a General Plan Amendment (GPA), Change of Zone (CZ), Conditional Use Permit for a Planned Unit Development (CUP), and Tentative Tract Map No. 38459 (TTM) to facilitate a 108
unit townhouse condominium project, on a 16.59-acre portion of 32.56-acre project site. The purpose of the Planned Unit Development (PUD) is to establish flexible standards to encourage innovation in housing types and provide amenities not generally found in suburban subdivisions, such as common open spaces and recreational areas. The General Plan Amendment (GPA), along with the Change of Zone (CZ), will allow for the change of the current land use designation from R2 Residential and Hillside Residential to R10 Residential and Parks/Open Space and the zoning designation from Residential 2 (R2) District and Hillside Residential (HR) District to Residential 10 (R10) District and Open Space (OS) District. The GPA, CZ, Conditional Use Permit (CUP), and Tentative Tract Map (TTM) together constitute the ("Proposed Project").

## PROJECT DESCRIPTION

## General Plan Amendment

A General Plan Amendment (GPA) application was submitted to change the land use designation of the Project Site from R2 Residential and Hillside Residential to R10 Residential and Parks/Open Space. The R10 land use designation is intended to provide for a variety of residential products and to encourage innovation in housing types with amenities not generally found in suburban subdivisions, such as common open spaces and recreational areas. The primary purpose of areas designated Parks/Open Space is to provide areas that are substantially unimproved, including, but not limited to, areas for outdoor recreation and the preservation of natural resources. The proposed General Plan Designations allow for the Proposed Project to be constructed on a 16.59-acre portion of 32.56 -acre Project Site, while retaining the remainder of the Project Site as Open Space.

## Change of Zone

A Change of Zone (CZ) application was submitted to rezone the Project Site from Residential 2 (R2) District and Hillside Residential (HR) District to Residential 10 (R10) District and Open Space (OS) District. Under the Proposed Project's current Residential (R2) District, a maximum of 2.0 units per gross acre is allowed. To obtain the desired number of units a change of zone is required to rezone the Project Site to Residential 10 (R10) District, which allows up to 10.0 units per gross acre.

## Conditional Use Permit for Planned Unit Development

The applicant proposes a Conditional Use Permit for a Planned Unit Development (PUD) to allow for flexible standards to address the unique characteristics of the site. The PUD document (graphics and text) prepared for the Proposed Project will establish the land use regulations, development standards, and design guidelines for the tract, including the dedication of permanent open space.

The PUD document also provides guidelines for architectural themes for the townhomes, that meet or exceed City-wide design standards in the Municipal Code. All development within the tract must meet the standards stated in the PUD, including plotting, setbacks, open space areas, and architecture. Additionally, the PUD provides
design guidance for community entrances and perimeter fencing around the community and around the drainage areas.

## Tentative Tract Map

Tentative Tract Map No. 38459 will subdivide the 32.56 gross acres of vacant and unimproved land into one 16.59 -acre (common-area) lot for 108 condominium units, and one 15.97-acre "remainder" lot for public open space. The tentative map would also create the interior private loop streets, and dedicate the 0.89 -acre park site. All on-site streets and drainage facilities will be maintained lots by a Homeowners Association (HOA).

## Site/Surrounding Area

The 32.56 -acre Project Site is a vacant and unimproved pie-shaped hillside lot located on the east side of Morton Road at the northwestern City Boundary. The Project Site slopes gradually upward away from Morton Road. To the north, properties are located within unincorporated Riverside County and are part of the Box Springs Mountain Reserve. Properties to the east are vacant and located within the Hillside Residential (HR) District. Properties to the east are also located within unincorporated Riverside County and are designated as "Gateway Center" Specific Plan. Properties to the South are located within the Residential 5 (R5) District and Hillside Residential (HR) District and are generally developed with single-family homes.

## Access/Parking

The Proposed Project's access will be provided by Morton Road with a private loop road serving the units. The Proposed Project has been designed to exceed the minimum parking requirements, providing a two-car garage for each unit, as well as 50 guest parking spaces along the private streets.

## Design/Landscaping

The PUD guidelines for the proposed development will include two elevation styles: Santa Barbara and Modern Farmhouse. Each building style will have three color combinations to provide interest among the housing types.

The PUD includes typical configurations for the new homes and common area landscaping. The HOA will maintain all common area landscaping in an effort to maintain a consistent well-maintained appearance of the streetscapes within the community. The Proposed Project also includes a 0.89 -acre park that will primarily serve the local neighborhood, including adjoining developed residential areas.

## REVIEW PROCESS

As part of the standard review process, all appropriate outside agencies have considered the Proposed Project. The Proposed Project was reviewed by the Project Review Staff Committee as required by the Municipal Code. Following subsequent revisions and reviews by staff, the Proposed Project was determined to be complete.

## ENVIRONMENTAL

An Initial Study was prepared by Psomas, in compliance with the California Environmental Quality Act (CEQA) and its guidelines. The Initial Study examined the potential impacts of the Proposed Project on the environment. The Initial Study/Mitigated Negative Declaration (IS/MND) serves as the appropriate CEQA documentation for the Proposed Project. With the implementation of the proposed mitigation measures, the Proposed Project will not have a significant effect on the environment. Technical studies prepared in support of the IS/MND include the following: Air Quality Calculations, Biological Resources Report, Jurisdictional Delineation, Rare Plant Survey Report, Burrowing Owl Survey Report, and Determination of Biologically Equivalent or Superior Preservation (DBESP) Report, Cultural Reports, Energy Calculations, Geotechnical Report, Slope Stability Report, EDR Radius Map Report, Preliminary Drainage Report, Project Specific Water Quality Management Report, Planned Unit Development, Traffic Impact Analysis, and Fire Hazard Analysis and Approach. Copies of the appendices to the IS/MND can be accessed from the link attached to this staff report. The documents can be reviewed at City Hall during operating hours.

Mitigation measures are recommended for the Proposed Project in the following areas: Aesthetics, Biological Resources, Cultural Resources, Energy, Geology and Soils, Hazards and Hazardous Materials, Public Resources, and Tribal Cultural Resources, all of which are incorporated into the Mitigation Monitoring and Report Program (MMRP). The measures for cultural resources have been included to address input from the Tribal governments. The measures are intended to ensure that potential resources that might be discovered are protected. However, these measures are not required to address a known significant impact. Based on the Initial Study and the proposed mitigation measures, the Proposed Project will not cause any significant impacts to the environment. In response to comments received from the California Department of Fish and Wildlife, mitigation measures have been slightly modified. These modifications do not result in a substantial change that would require recirculation of the environmental document.

The public comment period for the Notice of Availability of the Initial Study/Mitigated Negative Declaration began on March 2, 2023 and ended on March 31, 2023, (State Clearing House Number 2023020680) which satisfies the required 30-day review period required for this project.

## NOTIFICATION

Consistent with the City Municipal Code provisions, public notice was sent to all property owners of record within 600 feet of the Project Site, posted on the Project Site, and published in the Press Enterprise Newspaper. As of the preparation of this staff report, no public comments have been received regarding the Proposed Project.

REVIEW AGENCY COMMENTS

Staff has coordinated with outside agencies where applicable, as is the standard review process for these development applications.

## STAFF RECOMMENDATION

Staff recommends that the Planning Commission take the following actions:
A. That the Planning Commission ADOPT Resolution No. 2023-22, and thereby RECOMMEND the City Council:

1. ADOPT the Initial Study/Mitigated Negative Declaration prepared for General Plan Amendment (PEN20-0095), Change of Zone (PEN20-0096), Conditional Use Permit for a Planned Unit Development (PEN21-0066), and Tentative Tract Map No. 38459 (PEN22-0127), on file with the Community Development Department, incorporated herein by this reference, which was completed in compliance with CEQA and the CEQA Guidelines, and reflects that the Planning Commission and City reviewed and considered the information contained in the Initial Study/Mitigated Negative Declaration, and exercised its independent judgment and analysis of the Proposed Project's potential environmental impacts; and
2. ADOPT the Mitigation Monitoring and Reporting Program prepared for the Proposed Project, which consists of General Plan Amendment (PEN20-0095), Change of Zone (PEN20-0096), Conditional Use Permit for a Planned Unit Development (PEN21-0066), and Tentative Tract Map No. 38459 (PEN22-0127), pursuant to CEQA and its guidelines.
B. That the Planning Commission ADOPT Resolution No. 2023-23, and thereby RECOMMEND the City Council:
3. APPROVE General Plan Amendment (PEN20-0095) based on the Recitals, Evidence contained in the Administrative Records and Findings as set forth in Resolution No. 2023-23 and any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the General Plan Amendment.
C. That the Planning Commission ADOPT Resolution No. 2023-24, and thereby RECOMMEND the City Council:
4. APPROVE Change of Zone (PEN20-0096) based on the Recitals, Evidence contained in the Administrative Records and Findings as set forth in Resolution No. 2023-24 and any necessary and corresponding amendment to the City's Zoning Atlas to reflect the proposed changes in the zoning classification and/or redistricting associated with the Change of Zone.
D. That the Planning Commission ADOPT Resolution No. 2023-26, and thereby RECOMMEND the City Council:
5. APPROVE Conditional Use Permit for a Planned Unit Development (PEN21-0066), and Tentative Tract Map No. 38459 (PEN22-0127) based on the Recitals, Evidence contained in the Administrative Records and Findings as set forth in Resolution No. 2023-26.

## Subject: EMWD Comments for the Gateway Heights Project Notice of Intent to Adopt a Mitigated Negative Declaration

> Location: East side of Morton Road, approximately 300 feet north of Jennings Court in the City of Moreno Valley, Riverside County, California.

Dear Mr. Luis Lopez:

Eastern Municipal Water District (EMWD) thanks you for the opportunity to comment on the Notice of Intention to Adopt a Mitigated Negative Declaration for the Gateway Heights Project (project). The project proposes the construction of 108 detached townhouse condominium units, organized in 4-unit to 10 -unit "clusters" on a total of 13 development pads. The project would be located on southwesterly 16.59 acres of the 32.56 -acre project site. The 16.59 acres of the project site would be rezoned to Residential 10 District (R10) which allows maximum density of 10 dwelling units per net acre. The project would include a total of 3.1 acres of common open space, including trails and a 0.89 -acre community park area at the center of the development. The remaining 15.97 acres of the project site would be rezoned to Open Space (OS) and dedicated as conservation land.

EMWD offers the following comments:
To define the impact(s) on the environment and on existing EMWD facilities, and as development within this area occurs over time, the proponents of implementing development projects shall consult EMWD's Development Services Department to compare proposed and existing water demands and sewer flows, and prepare a Design Conditions report (DC), formally known as the Plan of Service (POS), to detail all

EMWD Comments
March 9, 2023
Page 2
pertinent facilities necessary to serve such implementing development projects, resulting in an approved DC, prior to final design and plan check of such facilities.

To help define EMWD's Design Conditions, EMWD requires beginning dialogue with project proponents at an early stage in the site design and development, via a one-hour complementary Due Diligence meeting. To set up this meeting the project proponent should complete a Project Questionnaire (form NBD-058) and submit to EMWD. To download this form or for additional information, please visit our web page www.emwd.org, then select the "Developer" link, then select the "New Development Process Forms" link. This meeting will offer the following benefits:

1. Describe EMWD's development process.
2. Identify project scope and parameters.
3. Provide a preliminary review of the project within the context of existing infrastructure.
4. Discuss potential candidacy for recycled water service.
5. Identify project submittal requirements to start the Design Conditions review.

Following the Due Diligence meeting, and to proceed with a project, the Design Conditions will need to be developed by the developer's engineer and reviewed/approved by EMWD prior to submitting improvement plans for Plan Check. The DC process and approval will provide the following:

1. Technical evaluation of the project's demands and existing system capacities.
2. Identification of impacts to existing facilities.
3. Identification of additional on-site and off-site facilities, necessary to serve the project.
4. Identification of easement requirements, if necessary.
5. Identification of potential EMWD's cost participation in facility oversizing, if applicable.

If you have questions or concerns, please do not hesitate to contact Maroun El-Hage at (951) 928-3777, extension 4468 or by e-mail at El-hagem@emwd.org.

Sincerely,

Dear Mr. Jason Ackerman, attorney/representative for Gateway Heights<br>Moreno Valley 92557, Asaon.ackerman@ackermanlawpc.com<br>Cc: Mr. Ulises Cabrera Mayor pro temp, mayor@moval.org,<br>Mr. Luis Lopez, Contract Planner City of Moreno Valley, luisl@moval.org<br>Mr. Sean P. Kelleher, Planning Division Manager 95 planningemail@moval.org<br>Mr. Edward A Delgado, District \# representative, edd@moval.org<br>RE: Project Development- Morton Road- Moreno Valley, California

I would like to request a copy of your traffic analysis report(s) regarding Gateway Heights, Moreno Valley, California. In addition, any other pertinent information related to the Gateway Heights project in Moreno Valley.

Furthermore, to be transparent I would like a detailed project announcement to be mailed out to all the residents affected by your proposed development. Our neighbors were taken by surprise. Your informational meeting announcement for the Zoom meeting was not publicly broadcast in our area. The timeframe was such short notice. There were many neighbors who never received this informational presentation meeting announcement nor received any notices from the city of Moreno Valley. Moreover, not everyone has the knowledge to use Zoom media for online meetings.
We already have a bottleneck of congested traffic problems on Box Springs Road at the entrance to the 60 freeway. The City of Moreno Valley has not addressed these issues as well as the narrow lanes going up north or down south on Morton Road.
There are already safety hazards due to illegally parked cars on Morton Road \& Box Springs Road. This is because the parking space inside the Tuscany Apartment is limited. How will this affect Seneca Elementary school? Especially in full peak sessions during pick up and dropping off their kids. Was this factor taken into consideration in your traffic report analysis?
At the meeting, you mentioned the zoning change from ( $\mathrm{R} 2, \mathrm{R} 5$ ) to R10. I believe this will dramatically have a negative economic impact on our property value. How was the rezoning determined? Was that a unilateral decision without the resident's knowledge or objection? We were not notified in a timely manner. In fact, I just barely knew about this zoom meeting from a neighbor. Our neighbors are concerned regarding this high density 108 townhouses development. Furthermore, it is NOT congruent to our custom, semi-custom homes in our area $1 / 2$ acres+. We already have enough problems with homelessness and thefts in our area.

What about the overflow of cars who are unable to park at this new proposed 108 Townhouse units? How will that be addressed? Are they going to park on our streets and move it out on street sweep days?

I mentioned in our Zoom discussion, I have lived here more than 27 plus years. I have not seen any metering devices for traffic activities at Box Springs Road and Morton Road nor at the traffic entrance leading to the entrance of the 60 Freeway. Furthermore, no metering devices at the other 60 freeway entrance/exit on Day Street. All of these are very important concerns. We mentioned, if there was a fire evacuation or emergencies to those of us that live here. Are there contingency plans in place? Was this taken into consideration in your report analysis?
Please provide us with this information that will be helpful and beneficial to all of us who live here in District \#2.I want everyone to know who will be affected by your Rezoning proposal and the traffic congestions that it will cause. I am hoping we can find a happy solution so that everyone will agree.
I am copying the Moreno Valley City Planner and the mayor's office on this email hoping for fair and balanced data that can address our concerns.
I am attaching our public objection to all that will be affected by this General Plan Amendment- Change of Zoning and the Morton Project Development. Signature is to follow. I look forward to hearing from every one of you and from the city planner very soon.
Sincerely, Andy Gildore, US Marine, Veteran, Business Owner

## Notice of Public Objection to General Plan Amendment (PEN20-0095), Change of Zone (PEN20-0096), Conditional Use Permit for a Planned Unit Development (PEN21-0066), and Tentative Tract Map No. 38459 (PEN22-0127)

The HengHou Group, owned by Shizao Zheng, has made application to the City of Moreno Valley to construct a 108 unit development of townhouses in the most Northwestern corner of the City, North of Jennings Court, and East of Morton Road, within District Two of Moreno Valley.

The City has invited Public Comment, which is due March 31, 2023.
For the following reasons, the undersigned residents of the Second District of Moreno Valley object to this proposal.

1) The Proposal requires and establishes a precedent for Radical Changes in Residential Density The Plan Amendment (PEN20-0095) inflicts upon our neighborhood a radical change of zone from R2-R5 Residential to R10 Residential, which is detrimental to the safe and quiet nature of our community, as well as our suburban property values. We have purchased and, at some cost, improved our single family homes in an R2-R5 zone. This significant shift to R10 zoning, with no regard to the needs of the already established community, constitutes a social and economic burden. Our community already experiences adverse effects of housing density: the apartment complex at Morton and Box Springs has brought scofflaws who dangerously park along Morton, blocking half the outgoing lane.

## 2) Traffic Congestion

The Traffic Study completed for this project is a document buried in an online file of 1197 pages. See Figures 13 and 14 on pages 996 and 998 respectively. These figures contrast current traffic volume (without the project) with anticipated traffic volume (with the project). For example, at the corner of Morton and Box Springs, during morning rush hour, there are currently 83 cars turning right onto Box Springs, headed toward the freeway. With this project, there will be 125 cars turning right. In the evening rush hour, turning left onto Morton from Box Springs, we currently see 88 cars. With this project, we are going to see 135 . To summarize, we will face about $50 \%$ more traffic at Morton and Box Springs.

Warning: External Email - Watch for Email Red Flags!
Hello -
In response to the City of Moreno Valley's request for public comments regarding the proposed development at the top of Morton Road...

While I am not outright opposed to this development, I do have SEVERAL concerns.

- From the side of Penunuri Place on which we reside, up into the foothills, and around Morton Road into unincorporated Riverside - all homes are detached single family, custom built, on $1 / 2$ acre or larger lots. So, the development of high density multi-family housing on MUCH smaller individual parcels seems a bit out of place.
- The neighborhood is also considered a "brush zone" by insurance companies, and homeowners insurance carriers are few and far between. Potential buyers of any such home should be made aware of such limitations. I don't want to THINK how expensive homeowners insurance will be for residents of this proposed multi-family housing development - what with it being RIGHT at the bottom of a mountain that has not burned in more than forty years. That alone could be cost prohibitive for many.
- I do not see anywhere in the vast volume of public documents plans to make any improvements to Morton Road. Sadly, the City of Moreno Valley largely ignores those living in the FAR corner of the city, often treating us as an "ugly redheaded stepchild" worthy of very little service or support. As a result, Morton Road is in VERY poor condition. Adding 1,000 vehicle trips per day, a near FIVE FOLD INCREASE over current traffic volume, is only going to worsen its condition. The City might just as well remove the asphalt and make Morton Road a dirt road. It surely couldn't be much worse.
- A large percentage of residents living farther down Morton Road, off of Wordsworth and Pala Foxia, appear to have NO IDEA our neighborhood exists. This is evidenced by the number of vehicles which FLY right off of these feeder streets onto Morton Road without so much as slowing down - let alone stopping. In the nine years we have called Penunuri Place our home - just my family alone has had HUNDREDS of near misses with vehicles FLYING off of said feeder roads. Approval of this project with no additional traffic controls, such as a stop sign at the
lower outlet of Wordsworth, is a recipe for disaster - and WILL eventually lead to somebody being killed.
- Closely aligned to the previous concern, in the event of a mandatory mass evacuation due to fire or other disaster, I am GRAVELY concerned about the capacity of Morton Road and those to which it connects. Weekday morning traffic on Box Springs Road ROUTINELY backs up to very near Clark Street due to inadequate traffic planning by the City of Moreno Valley, the County of Riverside, and the State of California. It routinely takes me EIGHTEEN MINUTES just to reach the freeway from my home. So, I am ALREADY concerned about road capacity - and now the City is proposing to add EVEN MORE vehicle traffic. In the event of said mass evacuation - people will almost certainly die as a result.
- Some of the above concern is, of course, due to the VERY unwise decision several years ago by the County of Riverside, State of California, and whichever railroad owns the nearby tracks to close the Gernert / Poarch crossing in unincorporated Riverside we residents USED to use regularly by continuing on Morton Road up into the foothills. That cut off a MAJOR point of evacuation. I know this decision had little/nothing to do with the City of Moreno Valley - but NOW it's beginning to come back and bite those who were responsible as the City and County both explore developments in this general vicinity.
- Closely aligned to the three previous bullet points is the City of Moreno Valley's shortsighted, punt heavy decision several years ago to make its side of Morton Road alongside the Tuscany Hills Apartments a No Parking Zone. This pushed the dozens of vehicles which daily parked on the City's side of Morton Road onto the unincorporated side of Morton Road. This, of course, eliminated the City's responsibility for traffic and/or crime enforcement related to the presence of said vehicles parked on ITS side of the road. An unfortunate byproduct of this, though, is that residents of said apartments ROUTINELY park WAY up Morton Road, beyond where it reduces to a single lane in each direction - utterly obstructing/blocking the flow of traffic in the process. Now the City wants to add EVEN MORE vehicles having to navigate a daily obstacle course - all because it was too lazy to deal with the parking related issues on its side of Morton Road? As you might have guessed, the City's decision on this matter is a VERY sore spot for me.
- I am also VERY concerned about what is already the utter lack of law enforcement in our neighborhood. Filed under the same "ugly redheaded stepchild" category - there is open drug dealing and prostitution currently taking place nightly at the cul-de-sac end of Jennings Court. Despite sharing my concerns with Moreno Valley Police multiple times - they wholesale refuse to acknowledge its existence,
let alone investigate or do something to make it stop. We're already on "ignore" up here, and adding 108 multi-family housing units nearby would appear only to further exasperate such problems - although it DOES give even more residents for the City to wholesale ignore, while happily collecting their taxpayer dollars.

This is at least a start to my concerns. I may have a few more to share prior to the deadline now that I've cleared the above from my mind.
iGg,

Steve Anderson

Subject: Public Objection

Warning: External Email - Watch for Email Red Flags!
THIS WILL SERVE AS NOTICE IN SUPPORT OF PUBLIC OBJECTION TO GENERAL PLAN AMENDMENT (PEN20-0095), CHANGE OF ZONE (PEN20-0096), CONDITIONAL USE PERMIT FOR A PLANNED UNIT DEVELOPMENT (PEN21-00660, AND TENTATIVE TRACT MAP NO. 38459 (PEN22-0127). COPY OF PUBLIC OBJECTION ATTACHED.

FIRST AND FOREMOST, neither the Henghou Group nor Shizao Zheng has served proper notice as required of the application or their intent. The application should be denied on the basis alone -- that notice was not formally given to all residents and property owners within the required notification radius.

SECOND, the Box Springs/Ironwood road infrastructure is not designed for the traffic that already impedes our community from freely coming and going from our neighborhood. Moreover, our neighborhood is not regularly policed. Motorhomes, trailers and vehicles are illegally parked on Morton; drivers race down the streets with no regard for the posted speed limit or the pedestrians, children or adults, let alone stop at the posted Stop signs.

THIRD, where will the additional children attend school? Not at our neighborhood elementary school which is already overcrowded Not at our local school because already there is not enough parking for the employees that work at that school and as such, we have illegally parked educators and guardians throughout the school day and during every school event.

Our community would be better served turning the mountainous area into a nature park that supports the wildlife that currently inhabits the area and that includes, but is not limited to donkeys, bobcats, coyotes, racoons, hawks, owls, bats, etc. Improvements such as walking, biking and horse trails would discourage vagrant and "homeless" migration, while increasing the value of our neighborhood.

This community has a voice and we do not want more rentals, more crime, more congestion!

Re: Project: Gateway Heights
Hearing Date: 5/11/2023
Dear Planning Commissioners,
This letter follows a recent community outreach presentation by the developer of the Gateway Heights project. I own a lot on Penunuri Avenue neighboring this proposed project. I am writing to voice my support for the project as it will be a good addition to the neighborhood.

This area of Moreno Valley needs more multi-family housing. The cost to maintain infrastructure for traditional large lot single family homes is unsustainable, and it is to the City's interest to provide more density, so costs can be spread over a larger tax base in a more limited geographical area.

More importantly, the need for housing in California is so great that multi-family projects such as this one are needed to fulfill that unmet housing demand. Additionally, it is a good fit for the adjoining Gateway Specific Plan area. And finally, the dedication of 17 acres of open space will be a real asset to the open space and recreational needs of the city.

Again, I support this project and I hope that it can be approved with conditions that are financially reachable for the applicant.

Sincerely,

Douglas C. Michie

City of Moreno Valley Community Development
14177 Frederick Street Moreno Valley, California 92553
Attn: Catherine Lin , Principal Planner (951) 413-3229
email : catherinel@moval.org
Project Title: Gateway Heights Project
Project Case Number(s): PEN 21-0066
To: Catherine Lin
We never received any notification from the City of Moreno Valley Community Development Department in the mail regarding the proposed Gateway Heights Project and have been unaware of the project until the placement of a sign on the property last Friday May 25, 2023. This project has a direct impact on the existing residents and we were unaware of the recent public comment period and where denied the opportunity to hear, and or provide comments relating to the proposed project. We have lived here for 40 years and are directly impacted from the project and needed to be included in the process.

After reviewing the proposed Gateway Heights Project, Project Case No.PEN 21-0066 and Change of Zoning we would like to state that we are in strong opposition to these changes given the potential aesthetic, visual, air quality, wildlife, and land use compatibility impacts on the existing residents and the West Box Springs Homeowners Association which was part of the planning process with The County of Riverside and the Gateway Center Project approved by the County of Riverside.

The introduction of a multifamily residential housing product type at the urbanized edge of the City's residential neighborhoods that currently abuts a hillside / open space area, represents an incompatibility issue. This project proposes a multifamily residential project adjacent to the rural / open space edge and away from the city core or area of intensity does not provide an appropriate transition to the area.

As stated the entire project as presented is not a comprehensive land use compatible to the area and is in conflict with the low densities reflected by the University Community Plan and the existing sparse rural residents and because it lies within the City of Riverside's sphere of influence, it should also conform to Riverside's Proposition R and Measure C land use ordinances.

Additionally by changing the land use zoning from Residential 2 (R2) and Hillside Residential (HR) 10. and significantly increasing the residential densities it will diminish the home values of the existing residents on the adjacent parcels within the original Gateway Center Specific Plan located in the County of Riverside on the west side of Morton and to the north. The Gateway Center Specific Plan (GCSP) which has only 2 high density areas located directly near the far outer edges closer to the SR-60 Freeway/ Railroad rights-of-way of the 317 acre development close to the freeway which was to
reduce the traffic through the rural/open areas to help preserve the aesthetic, visual, air quality, wildlife and rural area.
"All residential lots along the northerly and easterly perimeters of Planning Area Nos. 16 and 17 shall contain a minimum of 8,000 square feet not including land beyond the limits of grading area. Any residence constructed on these lots shall contain a minimum of 2,600 square feet of living area." (Amended by Staff at P.C. on 10/23/91) GCSP

Traffic congestion and contaminant air pollution will be dramatically impacted by the increase of dwelling units from the current single unit home zoning at 5 per acre to multi unit apartment/condominium of 108 units. New commuter traffic will add over a thousand daily vehicle trips to an already overburdened surface street and freeway transportation system. Increase traffic adjacent to Seneca Elementary School and generating more population and noise. There is only one road Morton for access to our properties due to the closure at Gernert and Watkins for the Metro Line and increased traffic would present a safety issue during any emergency.

The entire Project site is identified as occurring in a hazardous fire area which should require further enhancement of fire hydrants located on Morton Road and at the entrance to aid the Riverside County Fire Protection Master Plan in order to achieve an a better urban level of service. Mitigation measures need to be implemented to provide for better public safety.

The proposed Gateway Center Project has the potential to deplete groundwater supplies by interfering substantially with groundwater recharge by "the change in pervious surfaces to impervious surfaces that would occur with development of the site will reduce the amount of water reaching underground aquifers." Thus lowering the local groundwater table level and affecting the existing residents and the production rate of their pre-existing nearby wells.

Gateway Center Specific Plan No. 250 approved and adopted July 14, 1992 contained conditions of approval to help mitigate some of these impacts and other concerns of the residents directly impacted by development.

We are in strong opposition to the proposed changes for the Gateway Heights Project, Project Case No.PEN 21-0066 and any change of zoning. The project should have single family housing to alien with the planning area 16 and 17 on the Gateway Center Plan.

Thank you for the opportunity to comment on this matter. If you have any questions please contact me.
Sincerely,
Robin and Alan Ablott
10870 Pettegrew Road
Riverside, CA 92507
(951) 788-6764

The areas in dark orange/red are The Gateway Center higher density housing and the Gateway Heights project of a proposed townhouse condominium development is inconsistent with the planning areas 16 \& 17 of the Gateway Center plans and the rural area.

## Warning: External Email - Watch for Email Red Flags!

Good Morning all,
I'm very involved with the city of Fontana where my business is located. I recently attended a city meeting where a similar situation was taking place here. The project did NOT pass because of all the backlash from the community. Over 200 hundred signatures and roughly $20-25$ community members spoke against the project every time it was up for conversation. I share this with you so that maybe it can re-spark some interest with this matter. I plan to attend the meeting to share my thoughts regarding this project and speak against it.

Subject: Re: Moreno Valley Morton Road repavement \& communication failure
Afternoon,
My husband and I live within the required written notice radius and never received anything by mail.
In addition to Andy Gildore's seven (7) issues outlined below and which we still are awaiting answers, we add an eighth (8):
8. There is a significant environmental impact to also be considered before approving this project: What is planned for re-homing the burros, bobcats, rabbits, owls, etc.?

My husband is from rural Montana and the nature that surrounds us was a huge draw when we decided to purchase our home in this neighborhood. We do not want more concrete and congestion.

Sincerely,
Sandra and Larry Walsh

On Jun 8, 2023, at 4:56 AM, Andy Gildore [gildore@gmail.com](mailto:gildore@gmail.com) wrote:

Subject: Urgent Concerns Regarding the Gateway Heights Rezoning Proposal
Dear Mr. Sean Kelleher, Protemp/Mayor, District\#2 Rep Mr Delgado and Concerned Neighbors, I hope this email finds you well. I am writing to bring some urgent concerns to your attention regarding the Gateway Heights proposal for rezoning from R2 Residential to R10 Residential. Unfortunately, despite my previous attempts, I have not received a confirmation for inclusion on the Moreno Valley City email listserv for events related to this proposal. This is my third request, and I would appreciate your assistance in rectifying this issue.
Furthermore, I have discovered that only two streets in the vicinity of the proposed site received a Public Hearing Notice for June 8, 2023, 6 p.m. by U.S. mail, while the remaining residents were solely informed through a posted sign at the property. This lack of consistent notification has left many of us feeling taken aback and excluded from the decision-making process.
Regrettably, I must express my disappointment with the City of Moreno Valley's communication practices, not only towards its citizens but also in regard to responsiveness. Myself and other concerned neighbors have reached out to the contract planner and Moreno Valley City Officials via email, but we have yet to receive any form of acknowledgment or response. This absence of transparency, trust, and integrity in ensuring equal access and open communication is disheartening.
To provide clarity, let me outline the concerns of our community regarding the proposed rezoning:

1. Preservation of the R2 zoning: We strongly believe that maintaining the R2 zoning is essential to preserving the character of our neighborhood. The proposed R10 rezoning would introduce high-density townhome units that are not in harmony with our existing semi-custom to custom homes.
2. Parking concerns: We seek clarification on how the overflow of cars from the proposed townhomes will be accommodated. If a family has more than two cars, where will the additional vehicles be parked? We also question the monitoring and enforcement of any regulations in place and the potential consequences for non-compliance.
3. Community Park management: It is imperative to address the concerns surrounding the proposed Community Park. Specifically, we need reassurance that measures will be in place to prevent issues such as homelessness, loitering, encampments, and the accumulation of trash within the park area.
4. Emergency preparedness: Given the potential risks to our health and safety, we need to understand the evacuation plans in case of emergencies such as road closures or fires. It is crucial that adequate measures are in place to protect lives and properties in the event of an unfortunate incident.
5. Traffic impact mitigation: The absence of an unbiased traffic study report raises concerns regarding the proposed development's impact on our already congested Morton Road. Considering the 108 units, each with a 2-car garage, we estimate a significant increase of 216 to 324 cars on Morton Road alone. We urge the City of Moreno Valley to address this issue and provide a comprehensive plan to alleviate the potential traffic problems.
6. Property value compensation: We kindly request clarification on whether the City of Moreno Valley will provide compensation for any potential depreciation in property values resulting from the rezoning and the construction of the proposed townhomes.
We believe that the proposed rezoning from R2 to R10 will exacerbate the aforementioned concerns and negatively impact our community. Therefore, we urgently request your attention to these matters and seek your support in addressing and rectifying these issues.
Thank you for your time and consideration. We look forward to your prompt response, as our community's well-being and quality of life are at stake.

Sincerely,<br>Andy Gildore<br>Business Owner<br>U.S. Marine Corps Veteran

On Mon, May 1, 2023 at 7:27 AM Andy Gildore [gildore@gmail.com](mailto:gildore@gmail.com) wrote:
Dear Mr. Sean Kellher,
How are you doing? I hope all is well with you. On the early morning of Thursday, April $27^{\text {th }}, 2023$. All of our neighbors were taken by surprise because the entire Morton Road was closed. The entire Morton Road was being repaved from Box Springs Road to Jennings Court. Thank you very much, it was long overdue.
However, this is a formal complaint I want registered to the City of Moreno Valley and to the person in-charge of this project. We were not only late for work and important appointments. Our time/fuel wasted driving around without any detour signs posted in advance especially to all of us who live and use this road.
I believe the City of Moreno Valley has the obligation and responsibility to notify residents in writing prior to starting this project. In addition, we kept driving from one closed street to another without any directional signs. We were trapped in heavy traffic. I did talk to one of the street workers who mentioned- "All American Asphalt and Western Asphalt" were hired by the City of Moreno Valley. I made a remark to the worker that there were no detour signs nor advance notification posted. There should have been signs all around. The closure start/stop dates and alternate routes. So that we are aware of the appropriate day or two before this repaving project starts. Our only exit out of the area was Clark Street to Box Springs Road/Ironwood Ave. Later that morning the signs and safety cones were placed with detours posted with arrows. Too little too late.
Mr . Kellher, this is unacceptable a total communication breakdown under the watch of Moreno Valley City. There is a serious communication failure. We are taxpayers that fund the city personnel (their salary) who are public servants. This is a total disregard of our health, safety and well-being. Is it because they don't live here because of lack of care or it's a disorganized system? Do you think if dignitaries live here --- yourself or colleagues, would this happen here? It is so upsetting for this to have happened. Please forward this email to the officer in-charge of this project.
By the way, in my previous email you mentioned that my email will be registered on alert notification regarding Gateway Heights projects or any projects related to Morton Road or activity development alerts. I never received any city confirmation email of such listserv or bulletins. Please subscribe to me on this mailing list. In today's communication technology, there are vast ways of Media resources to broadcast information. We should have been notified. I have served my military time honorably for our country. "First to go, last to know" I expect some common-sense open transparent communication by those individuals in charge in the chain of command. Thank you!
Furthermore, by this event it is a perfect example NOT to rezone (R2-R5 to R10) or building the Gateway Heights project of 108 Townhouses. The traffic congestion is not conducive to our environment, quality of life and above all our property value.
If there was a fire or any evacuation emergencies we will be trapped because this is the only main road to get out because the dirt road is also closed off. Clark Street is our only other way out. Morton Road is a single lane going up and one lane going down by Seneca Elementary School. There will also have a negative impact on the elementary school to their kid's learning environment.
This is a formal notice I want registered that we will hold the City of Moreno Valley liable and responsible. In the future development of this area, it is unconscionable to build high density homes without ingress/egress accessibility, safety, and proper traffic flow. We already have traffic congestion. Thank you for your kind understanding and appreciate your cooperation.
Sincerely,
Andy Gildore

## 172 KB

Dear Mayor Cabrera and City Councilmembers:

My name is Frank Almeida and I live at 21012 Pala Foxia Place in Moreno Valley. On June 8, 2023, I attended the Moreno Valley Planning Commission meeting and expressed my opposition to the Gateway Heights project. Based on my conversations with the Gateway Heights project representative, Jason Ackerman, and City Staff, I am sending you this email in support of the project.

Jason gave me his contact information at the Planning Commission meeting and we connected a couple of days later. We talked about the project's traffic impact analysis, the existing roadway conditions and illegal parking on Morton Road, and issues related to homelessness and illegal dumping. Jason introduced me to Sean Kelleher and Catherine Lin via email and I shared additional concerns about illegal off-roading and illegal parking in our residential tract. (See attached email). Sean forwarded my concerns to various departments within the City and we are continuing to work together on these issues.

Based on my conversations with Jason and the City Staff, my opinion about the Gateway Heights project has changed. I believe the Gateway Heights project is a well-planned project that will not make any of the existing traffic problems worse. Also, the project will improve the area by offering new homes, completing flood control improvements, and contributing land to the Box Springs Canyon Preserve. Therefore, I am sending you this email in support of the Gateway Height project.

Sincerely,

```

Mr. Jason Ackerman
Ackerman Law PC
(via email)
Subject: Gateway Heights Moreno Valley - Parking Study
Dear Jason:
Translutions, Inc. (Translutions) is pleased to provide this parking study report summarizing the parking demand and supply for the proposed Gateway Heights residential project in the City of Moreno Valley. This analysis has been conducted based on the Off-Site Parking Standards from the City of Moreno Valley Municipal Code as well as the Institute of Transportation Engineers' (ITE) Parking Generation, $5^{\text {th }}$ Edition.

## PROJECT DESCRIPTION

The proposed project site is located on the eastside of Morton Road and north of Jennings Court and proposes the construction of 108 detached condos. Access to the project will be provided by one full-access driveway on Morton Road. The proposed project provides 283 parking spaces.

## PARKING REQUIREMENT PER CITY CODE

Moreno Valley Municipal Code. Chapter 9.11 Parking, Pedestrian and Loading Requirements, Section 9.11.040 Offstreet parking requirements provides the number of off-site parking requirements for the City. Table 9.11.040A-12 (relevant uses summarized below) shows the number of parking spaces required for relevant uses:

Table 9.11.040A-12 Off-Street Parking Requirements

| Residential Uses | Requirement | Covered Parking | Notes |
| :--- | :---: | :---: | :--- |
| Single-family | $2 /$ unit | Within an enclosed garage |  |
| Duplex | $2 /$ unit | Within an enclosed garage |  |
| 3 or more units: |  |  |  |
| Studio | $1.25 /$ unit | 1 covered/unit | Guest parking is required for all units at 0.25 |
| 1 bedroom | $1.5 /$ unit | 1 covered/unit | spaces/unit. Guest parking is included in the |
| 2 bedrooms | $2.0 /$ unit | 1 covered/unit | minimum required parking standard. |
| $3+$ bedrooms | $2.5 /$ unit | 2 covered/unit |  |

## PARKING ANALYSIS PER CITY CODE

This analysis evaluates the following scenarios:

1. Using rates for Single Family/Duplex Units
2. Using rates for 3 or more units for the following scenarios:
a. $50 \%$ 2-bedroom \& $50 \% 3+$ bedroom units
b. $100 \% 3+$ bedroom units

Single Family/Duplex Units. The City Code requirements listed in Table 9.11.040A-12 Off-Street Parking Requirements requires two (2) spaces per dwelling unit. Since the project proposes 108 units, the parking requirement would be 216 spaces. The proposed project provides 283 parking spaces, which is $31 \%$ higher than what is required by City Code.

Multiple Unit Development ( 3 or More Units). For projects that propose more than 3 units, the City Code requires parking based on number of bedrooms. This evaluation is based on the requirements listed in Table 9.11.040A-12 Off-Street Parking Requirements. This scenario evaluates one scenario where half the units ( 54 units) are 2-bedroom units, and the remainder are 3+ bedroom units.
$\mathbf{5 0 \%}$ 2-Bedroom \& 50\% 3+ Bedroom Units. Table A shows the number of spaces required under this scenario. As seen in Table A, the City Code requires 243 parking spaces. The proposed project provides 283 parking spaces, which is approximately $16 \%$ higher than what is required by City Code.

Table A: Parking Requirements for 50\% 2-Bedroom \& 50\% 3+ Bedrooms (City Code)

| Unit Type | \# of Units | Rate | Required Parking |
| :--- | :---: | :---: | :---: |
| Studio | 0 | $1.25 /$ unit | 0 |
| 1 bedroom | 0 | $1.5 /$ unit | 0 |
| 2 bedrooms | 54 | $2.0 /$ unit | 108 |
| 3+ bedrooms | 54 | $2.5 /$ unit | 135 |
| Total Units | 108 |  | $\mathbf{2 4 3}$ |

$100 \% 3+$ Bedroom Units. This scenario was evaluated to identify how many spaces would be required if all units were constructed with more than 3 bedrooms. Table B shows the number of spaces required under this scenario. As seen in Table B, the City Code requires 270 parking spaces. The proposed project provides 283 parking spaces, which is approximately $5 \%$ higher than what is required by City Code.

Table B: Parking Requirements for 100\% 3+ Bedrooms (City Code)

| Unit Type | \# of Units | Rate | Required Parking |
| :--- | :---: | :---: | :---: |
| Studio | 0 | 1.25/unit | 0 |
| 1 bedroom | 0 | $1.5 /$ unit | 0 |
| 2 bedrooms | 0 | $2.0 /$ unit | 0 |
| 3+ bedrooms | 108 | $2.5 /$ unit | 270 |
| Total Units | 108 |  | $\mathbf{2 7 0}$ |

## PARKING REQUIREMENT PER ITE PARKING GENERATION, 5 TH EDITION

The ITE Parking Generation, $5^{\text {th }}$ Edition is based on actual surveys and provides different rates based on observations during weekday and weekends. The data is segregated based on Dense Multi-Use Urban areas and General Urban/Suburban areas. The data is further divided based on whether the observed site is within $1 / 2$ mile of transit or not. This analysis is based on data for General Urban/Suburban "Not within $1 / 2$ mile of transit). Further, the ITE does not provide data for Single Family Residential uses and similar to the analysis based on City Code, the evaluation is based on rates for Low-Rise Multi-Family Residential development. Table C shows the parking demand for weekday and weekend days. As seen in Table C, the peak demand occurs on Sunday with a demand of 220 parking spaces. The proposed project provides 283 parking spaces, which is approximately $29 \%$ higher than the forecast demand.

Table C: Peak Parking Demand Based on ITE

| Land Use | Units ${ }^{1}$ | ITE Vehicle Parking Generation Rates |  |  |  |  |  | Project Parking Demand |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Average Rate |  |  | 85th Percentile Rate |  |  | Average Rate |  |  | 85th Percentile Rate |  |  |
|  |  | Week. | Sat. | Sun. | Week. | Sat. | Sun. ${ }^{2}$ | Week. | Sat. | Sun. | Week. | Sat. | Sun. |
| Multi-Family Housing Low Rise Not Close to Transit | 108 DU | 1.21 | 1.31 | 1.66 | 1.52 | 1.61 | 2.04 | 131 | 141 | 179 | 164 | 174 | 220 |
| Total Parking Provided |  |  |  |  |  |  |  | 283 | 283 | 283 | 283 | 283 | 283 |
| Total Parking Required |  |  |  |  |  |  |  | 131 | 141 | 179 | 164 | 174 | 220 |
| Parking Surplus (+)/Parking Deficit (-) |  |  |  |  |  |  |  | 152 | 142 | 104 | 119 | 109 | 63 |

## Notes:

- Based on Land Use 220-"Muttifamily Housing (Low-Rise) General Urban/Suburban No Nearby Rail Transit" from Institute of Transportation Engineers (ITE) Parking Generation (5th Ed.)
2 85th Percentile Rate for Sunday not available. Calculated by applying ratio of 85 th percentile \& average rate for Salurday applied to average Sunday rate.

## CONCLUSION

Based on the above analysis, it is our professional opinion that the proposed project provides more parking spaces than required either by City Code or those based on observations by the ITE Parking Generation, $5^{\text {th }}$ Edition.

If you have any questions, please do not hesitate to contact us at (949) 656-3131.
Sincerely,

## translutions, inc.

## Applicant Volunteered Conditions of Approval

1: The projects Covenants, Codes and Restrictions (CC\&R's) shall include a restriction that prohibits residents from using attached garages for storage and requires residents to use their garages for offstreet parking. Said statement shall be consistent with the following language: "No resident may convert or use any garage for purposes other than parking of the number of vehicles such garage was designed to contain and storage of reasonable amounts of household goods that do not interfere with the ability to park the number of vehicles such garage was designed to accommodate or create a fire or safety hazard."

2: The projects Covenants, Codes and Restrictions (CC\&R's) shall include a parking permit policy, requiring all residents to register their vehicles with the HOA in order to prohibit residents from utilizing designated guest parking spaces.

3: The Applicant shall provide a minimum of twenty-seven (27) guest parking spaces, clearly identified with signage. The final location of said spaces shall be reviewed and approved by the Planning Official.

## Community Development Department <br> Planning Division

## MEMORANDUM

To: Honorable Mayor Cabrera and Members of the City Council
From: Sean Kelleher, Community Development Director
Date: December 05, 2023
Subject: Public Hearing Item \# F. 1 (General Plan Amendment (PEN20-0095) Change of Zone (PEN20-0096) CUP (PEN21-0066) Tentative Tract Map (PEN22-0127)

After the publication of the agenda, City staff received the attached Public Comment.

# RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT 

December 5, 2023

City of Moreno Valley<br>Community Development Department Planning Division<br>Post Office Box 88005<br>Moreno Valley, CA 92552-0805

Attention: Kirt Coury Re: PEN 20-0095, PEN 20-0096, PEN 21-0066, PEN 22-0127, APN 256-150-001

The Riverside County Flood Control and Water Conservation District (District) does not normally recommend conditions for land divisions or other land use cases in incorporated cities. The District also does not plan check City land use cases or provide State Division of Real Estate letters or other flood hazard reports for such cases. District comments/recommendations for such cases are normally limited to items of specific interest to the District including District Master Drainage Plan facilities, other regional flood control and drainage facilities which could be considered a logical component or extension of a master plan system, and District Area Drainage Plan fees (development mitigation fees). In addition, information of a general nature is provided.

The District's review is based on the above-referenced project transmittal, received November 27, 2023. The District has not reviewed the proposed project in detail, and the following comments do not in any way constitute or imply District approval or endorsement of the proposed project with respect to flood hazard, public health and safety, or any other such issue:

This project would not be impacted by District Master Drainage Plan facilities, nor are other facilities of regional interest proposed.

This project involves District proposed Master Drainage Plan facilities, namely, $\qquad$ . The District will accept ownership of such facilities on written request by the City. The Project Applicant shall enter into a cooperative agreement establishing the terms and conditions of inspection, operation, and maintenance with the District and any other maintenance partners. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection, and administrative fees will be required. All regulatory permits (and all documents pertaining thereto, e.g., Habitat Mitigation and Monitoring Plans, Conservation Plans/Easements) that are to be secured by the Applicant for both facility construction and maintenance shall be submitted to the District for review. The regulatory permits' terms and conditions shall be approved by the District prior to improvement plan approval, map recordation, or finalization of the regulatory permits. There shall be no unreasonable constraint upon the District's ability to operate and maintain the flood control facility(ies) to protect public health and safety.
$\boxtimes \quad$ If this project proposes channels, storm drains larger than 36 inches in diameter, or other facilities that could be considered regional in nature and/or a logical extension a District's facility, the District would consider accepting ownership of such facilities on written request by the City. The Project Applicant shall enter into a cooperative agreement establishing the terms and conditions of inspection, operation, and maintenance with the District and any other maintenance partners. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection, and administrative fees will be required. The regulatory permits' terms and conditions shall be approved by the District prior to improvement plan approval, map recordation, or finalization of the regulatory permits. There shall be no unreasonable constraint upon the District's ability to operate and maintain the flood control facility(ies) to protect public health and safety.
$\boxtimes \quad$ This project is located within the limits of the District's Moreno Valley West End Area Drainage Plan Area Drainage Plan for which drainage fees have been adopted; applicable fees should be paid by cashier's check or money order only to the Flood Control District or City prior to issuance of grading permits. Fees to be paid should be at the rate in effect at the time of issuance of the actual permit.

An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities, namely, $\qquad$ . If a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required. For further information, contact the District's Encroachment Permit Section at 951.955.1266.
$\boxtimes \quad$ The District's previous comments dated September 5, 2023 are still valid.

## GENERAL INFORMATION

This project may require a National Pollutant Discharge Elimination System (NPDES) permit from the State Water Resources Control Board. Clearance for grading, recordation or other final approval should not be given until the City has determined that the project has been granted a permit or is shown to be exempt.

If this project involves a Federal Emergency Management Agency (FEMA) mapped floodplain, then the City should require the applicant to provide all studies, calculations, plans and other information required to meet FEMA requirements, and should further require that the applicant obtain a Conditional Letter of Map Revision (CLOMR) prior to grading, recordation or other final approval of the project, and a Letter of Map Revision (LOMR) prior to occupancy.

The project proponent shall bear the responsibility for complying with all applicable mitigation measures defined in the California Environmental Quality Act (CEQA) document (i.e., Negative Declaration, Mitigated Negative Declaration, Environmental Impact Report) and/or Mitigation Monitoring and Reporting Program, if a CEQA document was prepared for the project. The project proponent shall also bear the responsibility for complying with all other federal, state, and local environmental rules and regulations that may apply.

If a natural watercourse or mapped floodplain is impacted by this project, the City should require the applicant to obtain a Section 1602 Agreement from the California Department of Fish and Wildlife and a Clean Water Act Section 404 Permit from the U.S. Army Corps of Engineers, or written correspondence from these agencies indicating the project is exempt from these requirements. A Clean Water Act Section 401 Water Quality Certification may be required from the local California Regional Water Quality Control Board prior to issuance of the Corps 404 permit.

Very truly yours,

AMY MCNEILL

# RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT 

September 5, 2023
City of Moreno Valley
Community Development Department Planning Division
Post Office Box 88005
Moreno Valley, CA 92552-0805
Attention: Kirt Coury
Re: PEN 20-0095, PEN 20-0096, PEN 21-0066, TTM 38459, PEN 22-0127 and
APN 256-150-001
The Riverside County Flood Control and Water Conservation District (District) does not normally recommend conditions for land divisions or other land use cases in incorporated cities. The District also does not plan check City land use cases or provide State Division of Real Estate letters or other flood hazard reports for such cases. District comments/recommendations for such cases are normally limited to items of specific interest to the District including District Master Drainage Plan facilities, other regional flood control and drainage facilities which could be considered a logical component or extension of a master plan system, and District Area Drainage Plan fees (development mitigation fees). In addition, information of a general nature is provided.

The District's review is based on the above-referenced project transmittal, received August 28, 2023. The District has not reviewed the proposed project in detail, and the following comments do not in any way constitute or imply District approval or endorsement of the proposed project with respect to flood hazard, public health and safety, or any other such issue:
$\square \quad$ This project would not be impacted by District Master Drainage Plan facilities, nor are other facilities of regional interest proposed.

This project involves District proposed Master Drainage Plan facilities, namely, $\qquad$ . The District will accept ownership of such facilities on written request by the City. The Project Applicant shall enter into a cooperative agreement establishing the terms and conditions of inspection, operation, and maintenance with the District and any other maintenance partners. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection, and administrative fees will be required. All regulatory permits (and all documents pertaining thereto, e.g., Habitat Mitigation and Monitoring Plans, Conservation Plans/Easements) that are to be secured by the Applicant for both facility construction and maintenance shall be submitted to the District for review. The regulatory permits' terms and conditions shall be approved by the District prior to improvement plan approval, map recordation, or finalization of the regulatory permits. There shall be no unreasonable constraint upon the District's ability to operate and maintain the flood control facility(ies) to protect public health and safety.
$\boxtimes \quad$ If this project proposes channels, storm drains larger than 36 inches in diameter, or other facilities that could be considered regional in nature and/or a logical extension a District's facility, the District would consider accepting ownership of such facilities on written request by the City. The Project Applicant shall enter into a cooperative agreement establishing the terms and conditions of inspection, operation, and maintenance with the District and any other maintenance partners. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection, and administrative fees will be required. The regulatory permits' terms and conditions shall be approved by the District prior to improvement plan approval, map recordation, or

Re: PEN 20-0095, PEN 20-0096, PEN 21-0066,
TTM 38459, PEN 22-0127 and
252647
finalization of the regulatory permits. There shall be no unreasonable constraint upon the District's ability to operate and maintain the flood control facility(ies) to protect public health and safety.
$\boxtimes \quad$ This project is located within the limits of the District's Moreno Valley West End Area Drainage Plan for which drainage fees have been adopted; applicable fees should be paid by cashier's check or money order only to the Flood Control District or City prior to issuance of grading permits. Fees to be paid should be at the rate in effect at the time of issuance of the actual permit.
$\square \quad$ An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities, namely, $\qquad$ . If a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required. For further information, contact the District's Encroachment Permit Section at 951.955.1266.

The District's previous comments are still valid.

## GENERAL INFORMATION

This project may require a National Pollutant Discharge Elimination System (NPDES) permit from the State Water Resources Control Board. Clearance for grading, recordation or other final approval should not be given until the City has determined that the project has been granted a permit or is shown to be exempt.

If this project involves a Federal Emergency Management Agency (FEMA) mapped floodplain, then the City should require the applicant to provide all studies, calculations, plans and other information required to meet FEMA requirements, and should further require that the applicant obtain a Conditional Letter of Map Revision (CLOMR) prior to grading, recordation or other final approval of the project, and a Letter of Map Revision (LOMR) prior to occupancy.

The project proponent shall bear the responsibility for complying with all applicable mitigation measures defined in the California Environmental Quality Act (CEQA) document (ie., Negative Declaration, Mitigated Negative Declaration, Environmental Impact Report) and/or Mitigation Monitoring and Reporting Program, if a CEQA document was prepared for the project. The project proponent shall also bear the responsibility for complying with all other federal, state, and local environmental rules and regulations that may apply.

If a natural watercourse or mapped floodplain is impacted by this project, the City should require the applicant to obtain a Section 1602 Agreement from the California Department of Fish and Wildlife and a Clean Water Act Section 404 Permit from the U.S. Army Corps of Engineers, or written correspondence from these agencies indicating the project is exempt from these requirements. A Clean Water Act Section 401 Water Quality Certification may be required from the local California Regional Water Quality Control Board prior to issuance of the Corps 404 permit.

Very truly yours,

[^21]Report to City Council
TO: Mayor and City Council
FROM:
Sean P. Kelleher, Community Development Director
AGENDA DATE:
December 19, 2023
TITLE:
BEYOND FOOD MART

## RECOMMENDED ACTION

## RECOMMENDED ACTION

## Recommendations: That the City Council:

1. ADOPT Resolution 2023-XX:
2. CERTIFYING the Initial Study/Mitigated Negative Declaration prepared for the Proposed Project consisting of Master Plot Plan (PEN22-0238) and Conditional Use Permit (PEN22-0176); and
3. ADOPTING the Mitigation Monitoring and Reporting Program prepared for the Mitigated Negative Declaration; and
4. ADOPT Resolution 2023-XX:
5. APPROVING Master Plot Plan (PEN22-0238) and Conditional Use Permit (PEN22-0176);

## SUMMARY

Beyond Food Mart, Inc. ("Applicant") submitted applications for a Master Plot Plan (PEN22-0238) for a 1.31-acre commercial development and a Conditional Use Permit (PEN22-0176) for the operation of an eight (8) island fueling station, six (6) vehicle charging stations, 7,400 square foot convenience store, and drive-thru carwash, along with the associated landscaping, and on-site and off-site improvements ("Proposed Project"). The Proposed Project is located on the northwest corner of the intersection of Iris Avenue and Oliver Street (APN: 486-310-038) within the Downtown Center (DC) District. The Proposed Project, as designed and conditioned, is consistent with the
goals, policies, and objectives of the City's General Plan and the requirements of the Downtown Center (DC) District and the City's Municipal Code.

## BACKGROUND

The Proposed Project was considered by the Planning Commission at a duly noticed public hearing conducted on November 9, 2023, and the Planning Commission voted unanimously ( $7-0$ ) to certify and approve the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program and approve the Master Plot Plan (PEN22-0238) and the Conditional Use Permit (PEN22-0176) for the Proposed Project.

## DISCUSSION

## Proposed Project

## Master Plot Plan

The Proposed Project consists of a Master Plot Plan for the development of the 1.31acre commercial site with eight (8) island fueling stations, six (6) vehicle charging stations, a 7,400 square foot convenience store, and a drive-thru carwash, along with the associated landscaping, and on-site and off-site improvements.

## Conditional Use Permit

Pursuant to the requirements of Section 9.02.060 (Conditional Use Permits) of the City's Planning and Zoning Code, approval of an auto service station with accessory uses including vehicle charging stations, convenience store, and drive-thru carwash located within 300 feet from a residential zone or use is permitted within the subject Downtown Center (DC) District subject to the approval of a Conditional Use Permit.

The proposed Beyond Food Mart project operation as an eight (8) island fueling station, six (6) vehicle charging stations, convenience store, and drive-thru carwash is consistent with and in compliance with the development standards, requirements, and regulations of the Municipal Code for a Conditional Use Permit, as well as the goals, policies, and objectives of the City's General Plan.

With the exception of the proposed drive-thru carwash, the proposed Beyond Food Mart project facilities will be open seven (7) days per week and twenty-four (24) hours per day. At this time, there will be a total of twelve (12) employees covering three (3) shifts with a minimum of three (3) employees per shift. Beyond Food Mart utilizes a state-of-the-art security system with alarms, surveillance cameras, and security lighting for security purposes. Additionally, the employees are trained and directed so that the property is walked hourly to ensure cleanliness and safety. The operating hours of the drive-thru carwash and vacuum stations will be from 8:00 a.m. to 10:00 p.m.

## Site and Surrounding Area

The Project Site is currently vacant and unimproved. The parcels directly to the north and west of the Project Site are within the Downtown Center (DC) District and are
currently vacant and unimproved. The parcels to the east of the Project Site across Oliver Street are within 300 feet and developed with single-family residences within the Residential Medium Low (ML) District of the Moreno Valley Ranch Specific Plan (SP193). The parcels south of the Project Site across Iris Avenue are also within 300 feet and developed with single-family residences within the Residential Medium Low (ML) District of the Moreno Valley Ranch Specific Plan (SP193). The existing Kaiser Permanente Moreno Valley Medical Center is approximately 400 feet west of the Project Site.

## Access/Parking

The proposed Beyond Food Mart project provides direct access via two (2) primary entrances/exits, one (1) located along Iris Avenue and another on Oliver Street. Both driveways are restricted to "right-turn in" and "right-turn out" movements for public safety purposes. The internal site circulation has been designed to adequately accommodate on-site vehicular circulation including access to the island fueling stations, vehicle charging stations, convenience store, and drive-thru carwash tunnel and vacuum stations. Additionally, the carwash drive-thru lane has been designed to provide adequate stacking for the proposed use, not to impede internal vehicular circulation.

The Proposed Project provides 48 off-street parking spaces in compliance with Section 9.11.040 (Off-Street Parking Requirements) of the City's Planning and Zoning Code.

## Design/Landscaping

The architectural design is modern with varied rooflines and projections incorporated into the façade and varying paint colors and façade material schemes to create visual interest in the structures. Incorporating articulated wall surfaces and features, as well as the island fueling station canopy design, will enhance the visual aesthetics at this intersection.

The proposed landscaping plan provides for on-site landscaping along the perimeter of the Project Site. A combination of small and large trees, various shrubs, and ground cover will be utilized on the corner of the subject site along Iris Avenue and Oliver Street to enhance the Project Site and create pedestrian-friendly features.

As designed, the proposed Beyond Food Mart project conforms to the development standards of the Downtown Center (DC) District, the City's Landscaping Standards, and the design guidelines for commercial developments prescribed in the City's Municipal Code.

## REVIEW PROCESS

As part of the standard review process, all appropriate outside agencies have considered the Proposed Project. The Proposed Project was reviewed by the Project Review Staff Committee as required by the Municipal Code. Following subsequent revisions and staff review, the project was deemed complete.

## ENVIRONMENTAL

An Initial Study was prepared by EPD Solutions, Inc. and accepted by the Planning Division Staff in compliance with the requirements of the California Environmental Quality Act (CEQA) and its guidelines. The Initial Study examined the potential impacts of the proposed project on the environment. The Initial Study/ Mitigated Negative Declaration (IS/MND) serves as the appropriate CEQA documentation for the Proposed Project. With the implementation of the proposed mitigation measures, the Proposed Project will not have a significant effect on the environment. Technical studies prepared in support of the IS/MND include the following: Air Quality Analysis (CalEEMod 2022 Outputs); Health Risk Assessment; Biological Resources Assessment; Cultural Resources Assessment; Phase I Environmental Site Assessment; Preliminary Hydrology Report; Preliminary Water Quality Management Plan; Noise Impact Study; Traffic Impact Analysis; and Vehicle Miles Traveled Screening Analysis. Copies of the appendices to the IS/MND can be accessed from the link attached to this staff report. The documents can be reviewed at City Hall during operating hours, and online on the City's website.

Mitigation measures are recommended for the Proposed Project in the following areas: Air Quality, Biological Resources, and Tribal and Cultural Resources, all of which are incorporated into the Mitigation Monitoring and Report Program (MMRP). The cultural resources measures are intended to ensure that potential resources that might be discovered are protected. However, these measures are not required to address a known significant impact. Based on the Initial Study and with the implementation of the proposed mitigation measures, the Proposed Project will not cause any significant impacts to the environment.

The public comment period for the Notice of Availability of the Initial Study/Mitigated Negative Declaration began on October 13, 2023, and ended on November 2, 2023, (State Clearing House Number 2023100360) which satisfies the required 30 -day review period required for this project. As of the preparation of this staff report, no comments have been received. Written comments received after the preparation of this staff report will be provided at the public hearing.

## ALTERNATIVES

1. Certify and approve the Initial Study/Mitigated Negative Declaration and the Mitigated Monitoring and Reporting Program, and approve the Proposed Project. (Staff recommends this alternative.)
2. Deny the Proposed Project. (Staff does not recommend this alternative.)

## FISCAL IMPACT

The applicant estimates the project will generate between $\$ 150,000$ and $\$ 225,000$ in annual sales tax revenue to the City.

Additionally, the development of the site will generate approximately $\$ 172,000$ in one-

Page 4
time Development Impact Fees, including approximately $\$ 60,000$ for the purpose of public art. The Development Impact Fee estimate is based on the July 1, 2023, Development Impact fee rates. The Development Impact Fee amount is subject to change.

## NOTIFICATION

Consistent with the City Municipal Code provisions and applicable law, public notice was sent to all property owners of record within 600 feet of the Project Site, posted on the Project Site, and published in the Press Enterprise Newspaper. Public comments received prior to publication of the report have been attached to this report.

## PREPARATION OF STAFF REPORT

## CITY COUNCIL GOALS

Revenue Diversification and Preservation. Develop a variety of City revenue sources and policies to create a stable revenue base and fiscal policies to support essential City services, regardless of economic climate.

Positive Environment. Create a positive environment for the development of Moreno Valley's future.

## CITY COUNCIL STRATEGIC PRIORITIES

1. Economic Development
2. Public Safety
3. Library
4. Infrastructure
5. Beautification, Community Engagement, and Quality of Life
6. Youth Programs

## RESOLUTION NUMBER 2023-XX

## A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, ADOPTING AND APPROVING A MITIGATED NEGATIVE DECLARATION AND A MITIGATION MONITORING AND REPORTING PROGRAM FOR MASTER PLOT PLAN (PEN22-0238) AND CONDITIONAL USE PERMIT (PEN22-0176) FOR THE BEYOND FOOD MART LOCATED ON THE NORTHWEST CORNER OF IRIS AVENUE AND OLIVER STREET (APN: 486-310-038)

WHEREAS, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California, and the lead agency for the preparation and consideration of environmental documents for local projects that are subject to requirements of the California Environmental Quality Act (CEQA ${ }^{1}$ ) and CEQA Guidelines ${ }^{2}$; and

WHEREAS, Beyond Food Mart, Inc. ("Applicant") has submitted applications for a Master Plot Plan (PEN22-0238) for a 1.31-acre commercial development and a Conditional Use Permit (PEN22-0176) for the operation of an eight (8) island fueling station, six (6) vehicle charging stations, 7,400 square foot market, and a drive-thru carwash, including a state-of-the-art security system with alarms, surveillance cameras and security lighting, and the prohibition of alcohol beverage sales ("Proposed Project") located at the northwest corner of Iris Avenue and Oliver Street (APN: 486-310-038), within the Downtown Center (DC) District ("Project Site"); and

WHEREAS, Planning Division Staff completed an Initial Study ("Environmental Assessment") for the Proposed Project and based on the Environmental Assessment, recommended adoption of a Mitigated Negative Declaration ("MND") and adoption of a Mitigation Monitoring and Reporting Program ("MMRP") in accordance with Section 6 (ND Procedures) of the City's Rules and Procedures for the Implementation of the California Environmental Quality Act and the requirements of CEQA the CEQA Guidelines Sections 15070-15075; and

WHEREAS, a Notice of Intent to Adopt a Mitigated Negative Declaration was duly noticed and circulated for public review for a period of twenty (20) days commencing on October 13, 2023, through November 2, 2023; and

WHEREAS, in compliance with CEQA and the CEQA Guidelines, a MMRP, which is a program for monitoring and reporting on the Proposed Project's mitigation measures was prepared for the Proposed Project and circulated with the MND; and

WHEREAS, on November 9, 2023, a hearing was conducted by the Planning Commission whereby the Planning Commission voted unanimously 7-0 to adopt Planning Commission Resolution No. 2023-47 adopting the MND and the MMRP for the Proposed

[^22]Project, and adopt Planning Commission Resolution 2023-48 approving the Proposed Project; and

WHEREAS, on December 19, 2023, a hearing was conducted by the City Council to approve the Mitigated Negative Declaration/Initial Study, Mitigation Monitoring and Reporting Program, and the Proposed Project; and

WHEREAS, at the conclusion of the December 19, 2023 public hearing, in the exercise of its own independent judgment, the City Council determined that the Initial Study/Mitigated Negative Declaration and the Mitigation Monitoring and Reporting Program will reduce the environmental impacts of the Proposed Project to levels of insignificance and that there is no substantial evidence supporting a fair argument that the Proposed Project will have a significant effect on the environment.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

## Section 1. Recitals and Exhibits

That the foregoing Recitals and attached exhibits are true and correct and are hereby incorporated by this reference.

## Section 2. Evidence

That the City Council has considered all the evidence submitted into the Administrative Record for the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, including, but not limited to, the following:
(a) Initial Study/Mitigated Negative Declaration prepared for the Proposed Project, attached hereto as Exhibit A; and
(b) Notice of Intent to Adopt a Mitigated Negative Declaration and Newspaper Notice, attached hereto as Exhibit B; and
(c) Mitigation Monitoring and Reporting Program, attached hereto as Exhibit C; and
(d) Staff Report and Resolutions prepared for the Planning Commission's consideration and all documents, records, and references related thereto, and Staff's presentation at the public hearing; and
(e) Testimony, comments, and correspondence from all persons that were provided at, or prior to, the November 9, 2023, Planning Commission public hearing; and
(g) Staff Report for the City Council's consideration and all documents, records, and references related thereto, and Staff's presentation at the December 19, 2023, public hearing; and
(h) Testimony, comments, and correspondence from all persons that were provided at, or prior to, the City Council December 19, 2023 public hearing.

## Section 3. Findings

That based on the content of the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings:
(a) That all environmental impacts of the Proposed Project, with the mitigation measures set forth in the MMRP, have been reduced to levels of insignificance and there is no substantial evidence supporting a fair argument that the Proposed Project will have a significant effect on the environment that would otherwise require the preparation and certification of an Environmental Impact Report;
(b) That the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program have been completed in compliance with CEQA and the CEQA Guidelines and are consistent with the City's Rules and Procedures for the Implementation of the California Environmental Quality Act;
(c) That the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program represent the independent judgment and analysis of the City Council and the City as the lead agency for the Proposed Project; and
(d) That the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program are adequate to serve as the required CEQA environmental documentation for the Proposed Project.

## Section 4. Adoption

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings, as set forth herein, the City Council hereby adopts the Initial Study/Mitigated Negative Declaration and the Mitigation Monitoring and Reporting Program attached hereto as Exhibits A and B.

## Section 5. Repeal of Conflicting Provisions

That all the provisions as heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

## Section 6. Severability

That the City Council declares that, should any provision, section, paragraph, sentence, or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

## Section 7. Effective Date

That this Resolution shall take effect immediately upon the date of adoption.

## Section 8. Certification

That the City Clerk of the City Council shall certify to the passage of this Resolution.
PASSED AND ADOPTED THIS 19th DAY OF DECEMBER, 2023.

## 13. Description of the Site and Project:

## Environmental Setting

The Project Site is located in the City of Moreno Valley in western Riverside County in a primarily residential area of the city. The property is currently vacant and is surrounded by residential development to the east and south. Vacant parcels are to the north and to the west; the Kaiser Permanente Moreno Valley Hospital is west of the Project Site. Approximately $1 / 2$-mile to the south lie the foothills of the Lake Perris Recreational Area. Proposed Site photos are included as Figure 7.

## Project Description

Beyond Food Mart, Inc. (Applicant) is requesting to construct and operate an eight-island fueling station, a 7,460 square-foot convenience store, and a 1,790 square-foot drive-thru carwash. The proposed Site Plan is included as Figure 3, the Preliminary Grading Plan as Figure 4, the Preliminary Landscaping Plan as Figure 5, and the Building Elevation Plans are Figures 6a and 6b. The Project Site contains 1.31 acres (APN: 486-310-038). The Project Site is located at the northwest corner of Iris Avenue and Oliver Street in the City of Moreno Valley.

The fueling station includes two underground storage tanks (USTs). One tank would have a capacity of 27,000 gallons and would be a split tank that would store both E85 and unleaded fuel. The second tank would have a capacity of 15,000 gallons and would store unleaded premium and diesel fuel. The fueling islands would include 16 fueling positions and would be located under a 5,979 square-foot canopy with a height of 19'6". The development would include 14,944 square-feet of landscaping. There would be a total of 43 passenger car parking spaces to include two handicap accessible spaces, two spaces for electric vehicles (EV), four spaces for low emission (carpool/vanpool) vehicles, 3 spaces for bicycle parking, and one additional parking space will be reserved as a loading/unloading space. Access to the Project Site will be provided by two approximately 35 -foot driveways on the eastern and southern portion of the lot; one from Iris Avenue and one from Oliver Street.

The maximum height of the convenience store and canopies would not exceed 50 feet. The Proposed Project is expected to operate 24 hours a day, seven days a week, and will include approximately 12 employees.

The Proposed Project also includes a storm water system with one underground bioretention basin with a storm water retention volume of 15,237 cubic-feet (CF) that would be located on the southeast portion of the Project Site and one vegetation swale located (refer to Figure 3). There is an existing water line in Iris Avenue that the Proposed Project would connect to. The Proposed Project would also connect to an existing sewer line in Iris Avenue.

The Proposed Project's Landscape Plan (see Figure 5) includes as a Design Feature, a number of mature trees on-site as well as shrubs and ground cover representing $35 \%$ of the site development and will be in accordance with the City's Municipal Code 9.17.030.
14. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21080.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

The City initiated AB 52 consultation on August 19, 2023 for a 30 -day period. A total of seven tribes received letter notification, which are:

- Agua Caliente Band of Cahuilla - Desert Cahuilla Indians Indians
- Morongo Band of Mission Indians - Pechanga Cultural Resources Department
- San Manuel Band of Mission Indians
- Soboba Band of Luiseno Indians
- Ricon Band of Luiseno Indians

Two tribes responded as follows:

| Tribe | Comment Letter <br> Received | Summary of Response | Conclusion |
| :--- | :--- | :--- | :--- |
| Agua Caliente Band of Cahuilla <br> Indians | $8 / 30 / 2023$ | Tribal Historic Preservation <br> Office's concerns have been <br> addressed. | AB 52 <br> consultation is <br> concluded |
| San Manuel Band of Mission <br> Indians | $8 / 31 / 2023$ | Project outside of Serrano <br> ancestral territory. | Consultation not <br> requested |

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21083.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.
15. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):
a. None

## ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

| $\square$ | Aesthetics | $\square$ |  <br> Forestry Resources | $\square$ | Air Quality |
| :---: | :---: | :---: | :---: | :---: | :---: |

## DETERMINATION (To be completed by the Lead Agency):

On the basis of this initial evaluation:
I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DFCLARATION pursuant to applicable standards, and (b) have been

## EVALUATION OF ENVIRONMENTAL IMPACTS:

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a Lead Agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a projectspecific screening analysis).
2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3) Once the Lead Agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
4) Less Than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The Lead Agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section XVII, "Earlier Analyses," may be cross-referenced).
5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or another CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
a) Earlier Analyses Used. Identify and state where they are available for review.
b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7) Supporting Information Sources. A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.
8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
9) The explanation of each issue should identify:
a) the significance criteria or threshold, if any, used to evaluate each question; and
b) the mitigation measure identified, if any, to reduce the impact to less than significance.

## Mitigation Monitoring and Reporting Program

## Introduction

The California Environmental Quality Act (CEQA) requires a lead or public agency that approves or carries out a project for which an Mitigated Negative Declaration has been certified which identifies one or more significant adverse environmental effects and where findings with respect to changes or alterations in the project have been made, to adopt a "...reporting or monitoring program for the changes to the project which it has adopted or made a condition of project approval in order to mitigate or avoid significant effects on the environment" (CEQA, Public Resources Code Sections 21081, 21081.6).

A Mitigation Monitoring and Reporting Program (MMRP) is required to ensure that adopted mitigation measures are successfully implemented. The City of Moreno Valley is the Lead Agency for the project and is responsible for implementation of the MMRP. Table 1 of this report describes the MMRP for the Project and identifies the parties that will be responsible for monitoring implementation of the individual mitigation measures in the MMRP. This report also describes existing Plans, Programs, or Policies (PPPs) that apply to the project in Table 2.

## Mitigation Monitoring and Reporting Program

The MMRP for the Project will be active through all phases of the Project, including design, construction, and operation. The attached table identifies the mitigation program required to be implemented by the City for the Project. The table identifies mitigation measures required by the City to mitigate or avoid significant impacts associated with the implementation of the Project, the timing of implementation, and the responsible party or parties for monitoring compliance.

The MMRP also includes a column that will be used by the compliance monitor (individual responsible for monitoring compliance) to document when implementation of the measure is completed. As individual Plan, Program, Policies; and mitigation measures are completed, the compliance monitor will sign and date the MMRP, indicating that the required actions have been completed.

This page intentionally left blank.

TABLE 1: MITIGATION MONITORING AND REPORTING PROGRAM

| MITIGATION MEASURE | ACTION AND TIMING | Responsible for ENSURING COMPLIANCE / VERIFICATION | DATE COMPLETED AND INITIALS |
| :---: | :---: | :---: | :---: |
| Air Quality |  |  |  |
| MM AQ-1: Compliance with SCAQMD Rules 402 and 403. The <br> Project Proponent would be required to comply with Rules 402 nuisance, and 403 fugitive dust, which require the implementation of Best Available Control Measures (BACMs) for each fugitive dust source, and the AQMP, which identifies Best Available Control Technologies (BACTs) for area sources and point sources. The BACMs and BACTs would include, but not be limited to the following: <br> 1. The Project Proponent shall ensure that any portion of the site to be graded shall be pre-watered prior to the onset of grading activities (see Figures 4 and 6). <br> a) The Project Proponent shall ensure that watering of the site or other soil stabilization method shall be employed on an on-going basis after the initiation of any grading activity on the site. Portions of the site that are actively being graded shall be watered regularly ( $3 x$ daily) to ensure that a crust is formed on the ground surface and shall be watered at the end of each workday. <br> b) The Project Proponent shall ensure that all disturbed areas are treated to prevent erosion until the site is constructed upon. <br> c) The Project Proponent shall ensure that landscaped areas are installed as soon as possible to reduce the potential for wind erosion. <br> d) The Project Proponent shall ensure that all grading activities are suspended during first and second stage ozone episodes or when winds exceed 25 miles per hour. <br> During construction, exhaust emissions from construction vehicles and equipment and fugitive dust generated by | In Construction Plans and Specifications Prior to Demolition, Grading and Building Permits | City of Moreno Valley Building and Safety Division |  |

| MITIGATION MEASURE | ACTION AND TIMING | Responsible for ENSURING COMPLIANCE / VERIFICATION | DATE COMPLETED AND INITIALS |
| :---: | :---: | :---: | :---: |
| equipment traveling over exposed surfaces would increase $\mathrm{NO}_{x}$ and $\mathrm{PM}_{10}$ levels in the area. Although the Proposed Project does not exceed SCAQMD thresholds during construction, the Applicant/Contractor would be required to implement the following conditions as required by SCAQMD: <br> 1. To reduce emissions, all equipment used in grading and construction must be tuned and maintained to the manufacturer's specification to maximize efficient burning of vehicle fuel. <br> 2. The Project Proponent shall ensure that existing power sources are utilized where feasible via temporary power poles to avoid on-site power generation during construction. <br> 3. The Project Proponent shall ensure that construction personnel are informed of ride sharing and transit opportunities. <br> 4. All buildings on the Project Site shall conform to energy use guidelines in Title 24 of the California Administrative Code. <br> 5. The operator shall maintain and effectively utilize and schedule on-site equipment in order to minimize exhaust emissions from truck idling. <br> 6. The operator shall comply with all existing and future California Air Resources Board (CARB) and SCAQMD regulations related to diesel-fueled trucks, which may include among others: (1) meeting more stringent emission standards; (2) retrofitting existing engines with particulate traps; (3) use of low sulfur fuel; and (4) use of alternative fuels or equipment. |  |  |  |

| MITIGATION MEASURE | ACTION AND TIMING | Responsible for ENSURING COMPLIANCE / VERIFICATION | DATE COMPLETED AND INITIALS |
| :---: | :---: | :---: | :---: |
| Biological Resources |  |  |  |
| MM BIO-1: Migratory Bird Treaty Act. Nesting bird nesting season generally extends from February 1 through September 15 in southern California and specifically, March 15 through August 31 for migratory passerine birds. To avoid impacts to nesting birds (common and special status) during the nesting season, a qualified Avian Biologist will conduct pre-construction Nesting Bird Surveys (NBS) prior to Project-related disturbance to nestable vegetation to identify any active nests. If no active nests are found, no further action will be required. If an active nest is found, the biologist will set appropriate no-work buffers around the nest which will be based upon the nesting species, its sensitivity to disturbance, nesting stage, and expected types, intensity, and duration of the disturbance. The nests and buffer zones shall be field-checked weekly by a qualified biological monitor. The approved no-work buffer zone shall be clearly marked in the field, within which no disturbance activity shall commence until the qualified biologist has determined the young birds have successfully fledged and the nest is inactive. | Surveys to be conducted if construction occurs during the nesting period of February 1 through September 15. | City of Moreno Valley Community Development Department |  |
| Cultural Resources |  |  |  |
| MM CR-1: Archaeological Monitoring. Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The Project Archaeologist shall have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated | Confirmation of professional archaeologist retention/ongoing/monitoring/submittal of Report of Findings. Prior to issuance of Grading Permit and during subsurface excavation. | City of Moreno Valley Community Development Department |  |

| MITIGATION MEASURE | ACTION AND TIMING | Responsible for ENSURING COMPLIANCE / VERIFICATION | DATE COMPLETED AND INITIALS |
| :---: | :---: | :---: | :---: |
| the $A B 52$ tribal consultation process for the Project, has not opted out of the AB52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include: <br> a. Project grading and development scheduling; <br> b. The Project archeologist and the Consulting Tribes(s) as defined in CR-1 shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as needed basis; <br> c. The protocols and stipulations that the contractor, City, Consulting Tribe(s), and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, include any newly discovered cultural resource deposits that shall be subject to a cultural resource evaluation. |  |  |  |

| MITIGATION MEASURE | ACTION AND TIMING | Responsible for ENSURING COMPLIANCE / VERIFICATION | DATE COMPLETED AND INITIALS |
| :---: | :---: | :---: | :---: |
| Geology and Soils |  |  |  |
| MM GEO-1: Paleontological Resources. A paleontologist selected from the roll of qualified paleontologists maintained by the City shall be retained to provide spot-check monitoring services for the project. The paleontologist shall develop a Paleontological Resources Impact Mitigation Plan (PRIMP) to mitigate the potential impacts to unknown buried paleontological resources that may exist onsite. The PRIMP shall require that the paleontologist be present at the pre-grading conference to establish procedures for paleontological resource surveillance. The PRIMP shall require paleontological spot-check monitoring of excavation that exceeds depths of 5 feet. The PRIMP shall state that the project paleontologist shall reevaluate the necessity for paleontological monitoring after 50 percent or greater of the excavations deeper than 5 feet have been completed. <br> In the event that paleontological resources are encountered, ground-disturbing activity within 50 feet of the area of the discovery shall cease. The paleontologist shall examine the materials encountered, assess the nature and extent of the find, and recommend a course of action to further investigate and protect or recover and salvage those resources that have been encountered. <br> Criteria for discard of specific fossil specimens will be made explicit. If a qualified paleontologist determines that impacts to a sample containing significant paleontological resources cannot be avoided by project planning, then recovery may be applied. Actions may include recovering a sample of the fossiliferous material prior to construction, monitoring work and halting construction if an important fossil needs to be recovered, and/or cleaning, identifying, and cataloging specimens for curation and research purposes. Recovery, salvage and treatment shall be | Confirmation of professional paleontologist retention/ongoing/monitoring/submittal of Paleontological Resources Impact Mitigation Plan (PRIMP). Prior to issuance of Grading Permit and during subsurface excavation. | City of Moreno Valley Community Development Department |  |

| MITIGATION MEASURE |  | Responsible for <br> ENSURING COMPLIANCE <br> /VERIFICATION |

I. AESTHETICS - Except as provided in Public Resources Code $\$ 21099$ - Modernization of Transportation Analysis for Transit-Oriented Infill Projects - Would the project:
a) Have a substantial adverse effect on a scenic vista?

## Response: Less than Significant Impact

Scenic vistas are publicly accessible viewpoints that provide views of areas from the Project Site. Scenic vistas within the City include Box Springs Mountains and Reche Canyon area to the north approximately 1.7 miles from the Project Site, the "Badlands" to the east approximately 12 miles from the Project Site, and the Mount Russel area to the south approximately 12.4 miles from the Project Site.

The Project Site is located at the northwest corner of Oliver Street and Iris Avenue. Surrounding land uses include: one and two-story single-family residential units to the east, two-story singlefamily residential units to the south; a vacant parcel and Kaiser Permanente Hospital to the west, and a vacant parcel and additional hospital equipment storage to the north. Perimeter walls around the single-family residential homes located to the east and south of the Project Site, block views of scenic vistas from backyards and first floors of the single-family residential homes. The single-family residential units to the south are approximately 10 feet higher in elevation compared to the Project Site. Ornamental trees are located along Iris Avenue to the north and south, partially blocking scenic views of the Box Springs Mountains, and are also located east of Oliver Street, partially blocking views of the Box Spring Mountains from the single-family residential units to the east of Oliver Street.

The proposed Beyond Food Mart convenience store would be 23 feet in height at its tallest point and the fueling station canopy would not exceed 20 feet in height. Views of the Box Spring Mountains to the north of the Project Site would be intermittently blocked while traveling east on Iris Avenue due to ornamental trees located north of the street. While traveling west on Iris Avenue, views of the Box Spring Mountains would be partially blocked by the convenience store building and fueling station canopy. The development of the Beyond Food Mart would block some travelers' views of Box Spring Mountains to the north of the Project Site but is not considered a substantial adverse effect. The Upland Game Hunting Area can be seen when traveling south on Oliver Street and views will partially be blocked by the proposed Beyond Food Mart. Overall, with adherence to the development standards and regulations pursuant to Title IX (Planning and Zoning) of the City's Municipal Code, the development of the Proposed Project would have a less than significant impact on scenic vistas due to its limited size and height, and no mitigation is required.
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

## Response: Less than Significant Impact

The Project Site is currently vacant. Surrounding land uses include single-family residential to the east and south, and vacant land to the north and west. Two scenic highways are located within the City which includes State Route 60 (SR-60) and Moreno Beach Drive. State Route 60 is located approximately 3 miles north of the Project Site while Moreno Beach Drive is located approximately 0.3 mile east of the Project Site. However, single-family residential units are currently blocking views of the Project Site from Moreno Beach Drive. Therefore, the

## ISSUES \& SUPPORTING INFORMATION SOURCES:

with
Mitigation
Incorporated

| Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: |

development of the Proposed Project will have a less than significant impact related to scenic resources and no mitigation is required.
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

## Response: Less than Significant Impact

The Project Site is located in an urbanized area. The construction phase of the Project would introduce the use of machinery such as excavators and bulldozers. The presence of the construction equipment, as well as the construction activities, would temporarily alter the visual character of a portion of the Project Site. Construction staging areas, including earth stockpiling, storage of equipment and supplies, and related activities would contribute to a disturbed site, which would be a short-term visual impact. However, these construction activities would be temporary, and therefore not create a permanent significant visual impact.

Regarding long-term views, the Project Site is currently vacant and undeveloped. Single-family residential units are located to the south and east of the Project Site, with vacant undeveloped land located to the north and west. Just west of the vacant land is Kaiser Permanente Hospital (refer to Figures 2 and 3). The Proposed Project would comply with the City of Moreno Valley General Plan policies and regulations regarding the appearance of the proposed building and fuel station canopy. In addition, the height of the convenience store building and the fueling canopy would be equal or less than that of a single-family home. Therefore, the minor changes in visual character that would result from implementation of the Proposed Project would be less than significant. No mitigation is required.

The Proposed Project would be consistent with applicable development standards and regulations pursuant to Title IX (Planning and Zoning) of the City's Municipal Code for the Downtown Center (DC) Land Use District, as demonstrated below in Table 2.

Table 2
Commercial Development Standards

| Municipal Code Standard |  | Project Consistency |
| :--- | :--- | :--- |
| Block Development | Blocks over 500 feet should <br> feature mid-block connections as <br> pedestrian pathways or alleys. <br> Block sizes should range <br> between 330 and 660 linear feet <br> where feasible | N/A. The Proposed Project <br> would be developed on <br> 1.31 acres and does not <br> include residential or <br> commercial blocks. |
| Mid-Block Pathways | Mid-block pathways shall be no <br> less than 16 feet wide | N/A. Proposed Project has no <br> mid-block pathways. |
| Building Orientation | Buildings shall be oriented such <br> that frontages and entrances are <br> visible and accessible from the <br> public right-of-way pedestrian <br> connections, parks, or plazas | Consistent. The Project's main <br> access would be from Oliver <br> Street to the east and Iris <br> Avenue to the south. Sidewalks <br> exist along both project <br> frontages. |

| Density - Dwelling Units (DU)/Acre | NA (with or without affordable housing) | N/A. The Proposed Project does not include residential uses. |
| :---: | :---: | :---: |
| Minimum Site Area | As determined through area plan if required or site plan review | Consistent. The size of the Proposed Project is 57,064 square feet ( 1.31 acres) and is subject to site plan review. |
| Minimum Site Width (feet) | As determined through area plan if required or site plan review | Consistent. The size of the Proposed Project is 57,064 square feet ( 1.31 acres) and is subject to site plan review. |
| Minimum Site Depth (feet) | As determined through area plan if required or site plan review | Consistent. The size of the Proposed Project is 57,064 square feet ( 1.31 acres) and is subject to site plan review. |
| Front Building Setback (feet), (after dedications for right-of-way) ground floor use | 0-10 | Consistent. The front setback for all structures would 10 feet |
| Side Street Building Setback Area (feet), (after dedications for right-of-way) | 0-10 | Consistent. The street side setback for all structures would be 10 feet. |
| Interior Side Yard Setback (feet) | 0-10 | N/A. The Proposed Project does not include residential uses. |
| Rear Yard Setback (feet) | 0-10 | N/A. The Proposed Project does not include residential uses. |
| Lot Coverage, Maximum | Pending landscape and open space requirements | Consistent. The maximum lot coverage would be 16,376 square feet and landscaping consists of 14,944 square feet. |
| Building Height (feet), Maximum | None (50 ft Max on Site Plans) | Consistent. The maximum building height will be 23 feet. |
| Floor Area Ratio (FAR) | N/A | Consistent. The Floor Area Ratio for the Proposed Project is $6.16 \%$. |
| Minimum Dwelling Size | a) Studio and One Bedroom: 450 square feet; <br> b) Two Bedroom: 800 square feet; <br> c) Three Bedroom: 1,000 square feet | N/A. The Proposed Project does not have residential uses. |
| Minimum Distance Between Buildings (feet), (between residential and commercial uses) | 10 ft | Consistent. The minimum distance between Proposed Project buildings and adjacent residential use property lines would be at least 100 feet. |
| Parking (surface) Side Street Setback (feet), (after dedications for right-of-way) | 10 ft | Consistent. The minimum setback distances are met. |

# ISSUES \& SUPPORTING <br> INFORMATION SOURCES:

| Parking (surface) Side <br> Street Setback (feet), <br> (after dedications for <br> right-of-way) | Consistent. The minimum <br> setback distances are met. |  |
| :--- | :---: | :--- |
| Garage/Truck-Under <br> Parking | Prohibited along front lot lines | N/A. There is no proposed <br> garage or truck-under parking <br> within the Project Site. |
| Underground/Podium <br> Parking | Allowed beneath building <br> footprints | N/A. There will not be any <br> underground or podium parking <br> within the Project Site. |
| Above Ground Parking <br> Structure | Allowed if screened from views <br> from public right-of-way and <br> adjacent single family residential <br> zones | N/A. There will be no above <br> ground parking structures on <br> the Project Site. |
| Setback Landscaping | All setbacks exclusive of required <br> walkways and driveways will be <br> landscaped planting areas | Consistent. The Proposed <br> Project would include <br> landscaped setbacks. |
| Publicly Accessible <br> Open Space <br> (nonresidential) | N/A. The Proposed Project <br> does not have open space <br> uses. |  |
| Private Open Space area <br> (multifamily <br> residential) | 150 sq ft per unit on 1st floor, and <br> 100 sq ft per unit on upper floors | N/A. The Proposed Project <br> does not have residential uses. |
| Common Open Space <br> (multifamily <br> residential) | 300 sq ft per unit | N/A. The Proposed Project <br> does not have residential uses. |
| Ground floor building <br> frontages clear glazing <br> material | $60 \%$ | Consistent. The architectural <br> materials requirements are met. |
| Ground floor-to-ceiling <br> minimum height (feet) | $15-20$ | Consistent. The minimum <br> ceiling heights are met. |

As discussed above, in Table 2, the Proposed Project would be consistent with the applicable development standards and regulations pursuant to Title IX (Planning and Zoning) of the City's Municipal Code. Thus, the Proposed Project would not conflict with the regulations regarding aesthetics and scenic quality in the Moreno Valley Municipal Code. The new buildings would be setback from adjacent streets and would not encroach into existing public long-distance views. Landscaping would be installed pursuant to the City's standards. As a result, the Proposed Project would not result in the creation of an aesthetically detrimental site open to public view. Therefore, while the Proposed Project would change the visual character of the site, it would not substantially degrade the existing visual quality of its surroundings, and impacts would be less than significant.

## Response: Less than Significant Impact

The Project Site presently does not contain any source of light. Sources of light in the area include street lighting along Iris Avenue and Oliver Street, as well as the fully improved roadways, and single-family residential lighting south and east of the site. Glare is a daytime occurrence resulting from light reflecting off polished surfaces and affecting viewers in nearby moving vehicles. The development of the Beyond Food Mart would create new sources of light

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| :---: | :---: |

and glare. At night, the Proposed Project's interior and exterior building lights and landscape/security lighting would be visible from the adjacent single-family residential uses, and to a lesser extent, from the surrounding public streets. However, these light sources would not contribute to impacts on the night sky, as they would not exceed existing background light levels already present within the surrounding area. In addition, new construction shall comply with the City of Moreno Valley's General Plan and Municipal Code requirements. A lighting plan would be submitted to the City for approval prior to issuance of Building Permits. Therefore, lighting impacts would be less than significant. No mitigation is required.

Sources of glare as a result of the Proposed Project implementation include reflective building materials and vehicles parked within and traveling to and from the property. The amount of glare would depend on the location of the reflective surfaces and the direction of the sun. Any glare produced by the reflective surfaces would be temporary, as the location of the sun would be changing throughout the day. The Proposed Project is consistent with the City's General Plan and Municipal Code. Therefore, impacts from glare would be less than significant. No mitigation required.

II. AGRICULTURE AND FOREST RESOURCES - In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?

## Response: No Impact

The California Department of Conservation, Farmland Mapping and Monitoring Program (FMMP) compile important farmland maps pursuant to the provisions of Section 65570 of the California Government Code. The maps are updated every two years using a computer

## ISSUES \& SUPPORTING INFORMATION SOURCES:

|  | Less Than |
| :---: | :---: |
| Potentially | Significant |
| Significant | with |
| Impact | Mitigation |

| Less Than <br> Significant <br> Impact | No |
| :--- | :---: |
|  | Impact |

mapping system, aerial imagery, public review and field reconnaissance. According to the FMMP, the Project Site lies within "farmland of local importance and is surrounded by farmland of local importance and urban and built-up land". However, much of this land has already been developed or is planned to be developed into various urban uses. The closest Prime Farmland to the Project Site is located approximately 2.8 miles north of the Project Site. Therefore, no Prime, Unique, or Farmland of Statewide Importance is located within the Project limits and no impact would result from the development of the Proposed Project. No mitigation is required.
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

## Response: No Impact

The California Land Conservation Act of 1965 - or commonly known as the Williamson Act, enables local governments to enter into contracts with private landowners for the purpose of restricting specific parcels of land to agricultural or related open space uses. In return, landowners are given a lower property tax assessment. The Project Site does not contain land that is enrolled in a Williamson Act contract. Additionally, according to the City of Moreno Valley's Zoning Map, the Project Site is currently zoned for "Downtown Center (DC)." In addition, the surrounding area contained existing or planned suburban development, and the City has no agricultural land use designations in its General Plan or zoning. Due to the Project Site not part of a Williamson Act contract, nor is zoned for agricultural uses, no impact associated with this issue would occur. No mitigation is required.
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section $12220(\mathrm{~g})$ ), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section $51104(\mathrm{~g})$ )?

## Response: No impact

The Project Site is currently vacant and undeveloped. The site does not contain any forest land, Timberland Production, nor is it zoned for such uses. Therefore, the Proposed Project would have no impact on forest land, timberland, or timberland zoned Timberland Production. No mitigation is warranted.
d) Result in the loss of forest land or conversion of forest land to non-forest use?

## Response: No Impact

As defined in Public Resources Code (PRC) Section 12220(g), "Forest land" is land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits. The Project Site and surrounding properties are not currently zoned, being managed, defined or used as forest land as identified in PRC Section 12220(g). Furthermore, the Project Site and surrounding area do not contain trees that would constitute urban forestry or any forest-related resources. Therefore, implementation of the Proposed Project would not convert forest land to non-forest use. No impacts are identified or anticipated, and no mitigation measures are required.

| Impact |  |  |

e) Involve other changes in the existing environment which, due to their location or nature, could result in the conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

## Response: No Impact

As noted above, the Project Site is currently vacant and is not utilized for agricultural production or timberland. Neither the Project Site nor adjacent facilities are being used for or zoned for farmland or forest land. Therefore, the development of the Proposed Project would not result in the conversion of farmland to non-agricultural use or forest land to non-forest uses. No impact to the conversion of agricultural lands or forest lands would occur. No mitigation is required.

III. AIR QUALITY - Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:
a) Conflict with or obstruct implementation of the applicable air quality plan?

## Response: Less than Significant Impact

The Project Site is located in the South Coast Air Basin (SCAB). The South Coast Air Quality Management District (SCAQMD) has jurisdiction over air quality issues and regulations within the SCAB. The Air Quality Management Plan (AQMP) for the basin establishes a program of rules and regulations administered by SCAQMD to obtain attainment of the state and federal air quality standards. The most recent AQMP (2022 AQMP) was adopted by the SCAQMD on December 2, 2022. The 2022 AQMP incorporates the latest scientific and technological information and planning assumptions, including transportation control measures developed by the Southern California Association of Governments (SCAG) from the 2022 Regional Transportation Plan/Sustainable Communities Strategy, and updated emission inventory methodologies for various source categories.

A project is inconsistent with the AQMP if:

1) it does not comply with the approved general plan; or
2) it uses a disproportionately large portion of the forecast growth increment (change population or employment levels). The City of Moreno Valley currently designates the Project Site as Downtown Center (DC)under which the Proposed Project is an allowable use.

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Potentially |
| :---: | :---: |
| Significant |
| Impact |$\quad$| Less Than |
| :---: |
| Significant |
| with |
| Mitigation |
| Incorporated |

| Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: |

Additionally, large population or employment increases could affect transportation control strategies, which are among the most important in the air quality plan, since transportation is a major contributor to particulates and ozone for which the SCAB is not in attainment. Because the Proposed Project use has been considered in the City's General Plan or does it include activities that would substantially change population or employment levels within the air basin, the Proposed Project would not conflict with or obstruct implementation of the applicable air quality plan.

Criteria for determining consistency with the AQMP are defined in Chapter 12, Sections 12.2 and 12.3 of the SCAQMD's CEQA Air Quality Handbook (1993). These indicators are discussed below:

Consistency Criterion No. 1
The Proposed Project would not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP. The violations that Consistency Criterion No. 1 refers to are the California Ambient Air Quality Standards (CAAQS) and NAAQS. CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded. As emissions will not exceed the applicable thresholds, the Proposed Project is determined to be consistent with the first criterion.

Consistency Criterion No. 2
The Proposed Project would not exceed the assumptions in the AQMP based on the years of Project Site buildout phase. The 2022 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in the Moreno Valley GP is considered to be consistent with the AQMP.

## Construction Impacts - Consistency Criterion

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities.

## Operational Impacts - Consistency Criterion 2

The Project Site is located within the City of Moreno Valley. As per the General Plan, the Project is designated as Planned Commercial (PC) within the Downtown Center (DC) zone. The Proposed Project would include an eight-island fueling station, a 7,460-sf convenience store mart, and a 1.790 sf drive through car wash. The proposed land uses are consistent with the General Plan designation. Therefore, the project is determined to be consistent with the second criterion.

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Potentially |  |  |  |
| :---: | :---: | :---: | :---: |
| Significant <br> Impact | Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |

## AQMP Consistency Conclusion

The Proposed Project would not result in or cause NAAQS or CAAQS violations. The Proposed Project is consistent with the land use and growth intensities reflected in the adopted in the GP. Furthermore, the Proposed Project would not exceed any applicable regional or local thresholds. As such, the Proposed Project is therefore considered to be consistent with the AQMP and a less than significant impact is expected.
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

## Response: Less than Significant Impact

Construction and operational emissions for the Project Site were screened using CalEEMod version 2022 (see Appendix A). The CalEEMod outputs were based on the Site Plan, which is a 1.31-acre lot that would be developed with a 7,460 sf convenience store, an eight island fueling station with a 5,979 sf canopy, and a 1,790 sf drive-thru car wash. The emissions incorporate Rule 402 and 403 by default as required during construction. The criteria pollutants screened for include reactive organic gases (ROG), nitrous oxides (NOx), carbon monoxide (CO), sulfur dioxide (SO2), and particulates ( $\mathrm{PM}_{10}$ and $\mathrm{PM}_{2.5}$ ). Two of the analyzed pollutants, ROG and NOx, are ozone precursors. Both summer and winter season emission levels were estimated.

## Construction Emissions

Construction emissions are considered short-term, temporary emissions and were modeled with the following construction parameters: site preparation, grading (fine and mass grading), building construction, paving, and architectural coating. Construction emissions were modeled with an anticipated beginning date in early 2024 and an estimated completion date in late 2024 for an early 2025 operational year. The resulting emissions generated by construction of the Proposed Project are shown in Table 3, which represent the maximum summer and winter construction emissions, respectively.

Table 3
CaIEEMod 2022
Maximum Summer and Winter Construction Emissions
(Pounds per Day)

| Source/Phase | ROG | $\mathbf{N O}_{\mathbf{x}}$ | $\mathbf{C O}$ | $\mathbf{S O}_{\mathbf{2}}$ | $\mathbf{P M}_{\mathbf{1 0}}$ | $\mathbf{P M}_{\mathbf{2 . 5}}$ |

Phases do not overlap and represent the highest concentration.

| ISSUES \& SUPPORTING | Potentially <br> Significant <br> Impact | Less Than <br> Signifiant <br> witinn <br> Mitatation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |
| :--- | :--- | :--- | :--- | :--- |

As shown, both summer and winter season construction emissions are below SCAQMD thresholds. The Proposed Project does not exceed applicable SCAQMD regional thresholds during construction activities. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

## Compliance with SCAQMD Rules 402 and 403

Although the Proposed Project does not exceed SCAQMD thresholds for construction emissions, the Project Proponent would be required to comply with all applicable SCAQMD rules and regulations as the SCAB is in non-attainment status for ozone and suspended particulates ( $\mathrm{PM}_{10}$ and $\mathrm{PM}_{2.5}$ ).

The Project Proponent would be required to comply with Rules 402 nuisance, and 403 fugitive dust, which require the implementation of Best Available Control Measures (BACMs) for each fugitive dust source, and the AQMP, which identifies Best Available Control Technologies (BACTs) for area sources and point sources. The BACMs and BACTs would include, but not be limited to the following:

1. The Project Proponent shall ensure that any portion of the site to be graded shall be pre-watered prior to the onset of grading activities (see Figures 4 and 6).
(a) The Project Proponent shall ensure that watering of the site or other soil stabilization method shall be employed on an on-going basis after the initiation of any grading activity on the site. Portions of the site that are actively being graded shall be watered regularly ( $3 x$ daily) to ensure that a crust is formed on the ground surface and shall be watered at the end of each workday.
(b) The Project Proponent shall ensure that all disturbed areas are treated to prevent erosion until the site is constructed upon.
(c) The Project Proponent shall ensure that landscaped areas are installed as soon as possible to reduce the potential for wind erosion.
(d) The Project Proponent shall ensure that all grading activities are suspended during first and second stage ozone episodes or when winds exceed 25 miles per hour.

During construction, exhaust emissions from construction vehicles and equipment and fugitive dust generated by equipment traveling over exposed surfaces would increase NOx and PM 10 levels in the area. Although the Proposed Project does not exceed SCAQMD thresholds during construction, the Applicant/Contractor would be required to implement the following conditions as required by SCAQMD:

1. To reduce emissions, all equipment used in grading and construction must be tuned and maintained to the manufacturer's specification to maximize efficient burning of vehicle fuel.
2. The Project Proponent shall ensure that existing power sources are utilized where feasible via temporary power poles to avoid on-site power generation during construction.
3. The Project Proponent shall ensure that construction personnel are informed of ride sharing and transit opportunities.

4. All buildings on the Project Site shall conform to energy use guidelines in Title 24 of the California Administrative Code.
5. The operator shall maintain and effectively utilize and schedule on-site equipment in order to minimize exhaust emissions from truck idling.
6. The operator shall comply with all existing and future California Air Resources Board (CARB) and SCAQMD regulations related to diesel-fueled trucks, which may include among others: (1) meeting more stringent emission standards; (2) retrofitting existing engines with particulate traps; (3) use of low sulfur fuel; and (4) use of alternative fuels or equipment.

## Operational Emissions

The operational mobile source emissions were calculated using the CalEEMod (Version 2022) default mode at full buildout. Operational emissions are listed in Table 3 and Table 4, which represent summer and winter operational emissions, respectively.

Table 4

Source: CalEEMod 2022 Winter Emissions.
Emissions represent the daily maximum emissions.
As shown, both summer and winter season operational emissions are below SCAQMD thresholds. The Proposed Project does not exceed applicable SCAQMD regional thresholds during operational activities. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

Therefore, because the Proposed Project does not exceed the SCAQMD Risk Thresholds, the Project would pose a less than significant impact and no further mitigations are required.

Response: Less than Significant Impact
A Tier 2 screening level Toxic Air Contaminant (TAC) Health Risk Assessment (HRA) Technical Memorandum was prepared by Ganddini Group, Inc. on April 28, 2023 (see Appendix B).

As determined in the California Building Industry Association v. Bay Area Air Quality Management District (2015) 62 Cal. 4th 369 (CBIA) case the California Supreme Court determined that CEQA does not generally require an impact analysis of the existing environmental conditions on the future residents of a proposed project and generally only requires an analysis of the proposed project's impact on the environment. However, the CBIA case also stated that when a Proposed Project brings development and people into an area already subject to specific hazards and the new development/people exacerbate the existing hazards, then CEQA requires an analysis of the hazards and the proposed project's effect in terms of increasing the risks related to those hazards. Regarding air quality hazards, TACs are defined as substances that may cause or contribute to an increase in deaths or in serious illness, or that may pose a present or potential hazard to human health. As such, if a Proposed Project would not exacerbate pre-existing hazards (e.g., TAC health risks) then an analysis of those hazards and the Proposed Project's effect on increasing those hazards is not required.

The Project is proposing a fueling station in proximity to existing residential uses and would be a source of toxic air contaminants; therefore, an analysis of the potential toxic air contaminant emissions has been conducted.

Those who are sensitive to air pollution include children, the elderly, and people with preexisting respiratory or cardiovascular illnesses. For purposes of CEQA, the SCAQMD considers a sensitive receptor to be a location where a sensitive individual could remain for 24 hours, such as residences, hospitals, or convalescent facilities. Commercial and industrial facilities are not included in the definition because employees do not typically remain on-site for 24 hours.

The study identified that the closest sensitive receptors to the proposed service station include: the single-family residential uses to the east of Oliver Street, located at a distance of approximately 141 feet ( $\sim 43$ meters) from the façade of the residential dwelling unit to the edge of the fueling canopy, and the single-family residential uses to the south, located approximately 219 feet ( $\sim 67$ meters) from the underground storage tanks; approximately 250 feet ( $\sim 76$ meters) from the edge of the fueling canopy.

The Fresenius Kidney Care Dialysis Center is located at 27420 Iris Avenue, approximately 530 feet ( $\sim 161$ meters) northwest of the corner of the fueling canopy and Kaiser Permanente Moreno Valley Medical Center is located at 27300 Iris Avenue, approximately 667 feet ( $\sim 203$ meters) northwest of the edge of the fueling canopy.

The closest commercial uses would be on-site at the proposed car wash and the proposed convenience store, both of which are located approximately 65 feet ( $\sim 20$ meters) from the edge of the fueling canopy. The fueling station portion of the Project would be permitted by SCAQMD. Fuel-related emissions will be regulated by the SCAQMD Rule 461, and the facility would be required to obtain a Permit to Operate. Gasoline dispensing facilities are required to use Phase I/II EVR (enhanced vapor recovery) systems. Phase II EVR has an average efficiency

| ISSUES \& SUPPORTING |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| INFORMATION SOURCES: | Potentially <br> Significant <br> Impact | Less Than <br> Significiant <br> with <br> Mititaation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |

of 95.1 percent and Phase I EVR has an average efficiency of 98 percent. Therefore, potential for fugitive VOC or TAC emissions from the fuel pumps is negligible.

Assuming 5.04 million gallons per year of throughput for this fuel dispensing facility ( provided by Project applicant), using the SCAQMD Risk Assessment Procedures for Rules 1401, 1401.1 and 2126 and the SCAQMD Risk Tool (V1.105) R0409197 and a downwind distance of approximately 43 meters (the closest sensitive receptor location where an individual could remain for 24 hours), in the Perris area; the residential (Maximum Individual Cancer Risk) MICR for the closest residential receptor is 9.684 in a million. The commercial MICR at a distance of 20 meters is 1.452 in a million.

As the neither the residential cancer risk nor the commercial cancer risk exceeds 10 in a million, the project is not considered to be a significant source of TACs or fugitive VOC emissions and sensitive receptors in the project vicinity and the proposed commercial receptors would not be exposed to toxic sources of air pollution.

Additionally, as the MICR does not exceed SCAQMD thresholds at the closest receptors, any receptors located further away than the closest receptors would also not be exposed to significant TACs or fugitive VOC emissions. Therefore, the HRA found that the health risk impacts associated with the Proposed Project are considered to be less than significant, and no further analysis or mitigation is required.

Although no Mitigation Measures are required, the Proposed Project shall be required to adhere to:

Mitigation Measure: AQ-1 Compliance with SCAQMD Rules 402 and 403
Although the Proposed Project does not exceed SCAQMD thresholds for construction emissions, the Project Proponent would be required to comply with all applicable SCAQMD rules and regulations as the SCAB is in non-attainment status for ozone and suspended particulates ( $\mathrm{PM}_{10}$ and $\mathrm{PM}_{2.5}$ ).

The Project Proponent would be required to comply with Rules 402 nuisance, and 403 fugitive dust, which require the implementation of Best Available Control Measures (BACMs) for each fugitive dust source, and the AQMP, which identifies Best Available Control Technologies (BACTs) for area sources and point sources. The BACMs and BACTs would include, but not be limited to the following:

1. The Project Proponent shall ensure that any portion of the site to be graded shall be pre-watered prior to the onset of grading activities (see Figures 4 and 6).
(a) The Project Proponent shall ensure that watering of the site or other soil stabilization method shall be employed on an on-going basis after the initiation of any grading activity on the site. Portions of the site that are actively being graded shall be watered regularly

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Potentially | Less Than |
| :---: | :---: |
| Significant |  |
| Significant | with |
| Impact | Mitigation <br> Incorporated |

| Less Than <br> Significant <br> Impact | No |
| :--- | :---: |
| Impact |  |

( $3 x$ daily) to ensure that a crust is formed on the ground surface and shall be watered at the end of each workday.
(b) The Project Proponent shall ensure that all disturbed areas are treated to prevent erosion until the site is constructed upon.
(c) The Project Proponent shall ensure that landscaped areas are installed as soon as possible to reduce the potential for wind erosion.
(d) The Project Proponent shall ensure that all grading activities are suspended during first and second stage ozone episodes or when winds exceed 25 miles per hour.

During construction, exhaust emissions from construction vehicles and equipment and fugitive dust generated by equipment traveling over exposed surfaces would increase $\mathrm{NO}_{x}$ and $\mathrm{PM}_{10}$ levels in the area. Although the Proposed Project does not exceed SCAQMD thresholds during construction, the Applicant/Contractor would be required to implement the following conditions as required by SCAQMD:

1. To reduce emissions, all equipment used in grading and construction must be tuned and maintained to the manufacturer's specification to maximize efficient burning of vehicle fuel.
2. The Project Proponent shall ensure that existing power sources are utilized where feasible via temporary power poles to avoid on-site power generation during construction.
3. The Project Proponent shall ensure that construction personnel are informed of ride sharing and transit opportunities.
4. All buildings on the Project Site shall conform to energy use guidelines in Title 24 of the California Administrative Code.
5. The operator shall maintain and effectively utilize and schedule on-site equipment in order to minimize exhaust emissions from truck idling.
6. The operator shall comply with all existing and future California Air Resources Board (CARB) and SCAQMD regulations related to diesel-fueled trucks, which may include among others: (1) meeting more stringent emission standards; (2) retrofitting existing engines with particulate traps; (3) use of low sulfur fuel; and (4) use of alternative fuels or equipment.

Impacts associated with the Proposed Project potentially generating substantial pollutant concentrations are considered to be less than significant, and no further analysis or mitigation is required
d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?

## Response: Less than Significant Impact

The Proposed Project includes the development of a Beyond Food Mart, carwash, and fueling station. The nearest sensitive receptors to the Project Site are the residences in the neighborhood to the south and east, adjacent to Iris Avenue and Oliver Street. Potential odor sources associated with the Proposed Project may result from construction equipment exhaust

## ISSUES \& SUPPORTING INFORMATION SOURCES:

## Potentially Significant

 Impact| Less Than |  |  |
| :---: | :---: | :---: |
| Significant with | Less Than Significant | No |
| Mitigation | Impact |  |

and the application of asphalt and architectural coatings during construction activities as well as the temporary storage of domestic solid waste associated with the Proposed Project's longterm operational uses. Standard construction requirements would minimize odor impacts resulting from construction activity. It should be noted that any construction odor emissions generated would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction activity. Potential sources that may emit odors during the on-going operations of the Proposed Project would include odor emissions from the intermittent delivery truck emissions and trash storage areas. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with solid waste regulations. The Proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances related to odors. Therefore, a less than significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

## IV. BIOLOGICAL RESOURCES - Would the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

## Response: Less than Significant with Mitigation Incorporated

A Biological Resources Assessment (BRA), Jurisdictional Delineation, and Multiple Species Habitat Conservation Plan (MSHCP) Consistency Analysis prepared for the Proposed Project by Jennings Environmental, LLC dated February 2023 is summarized herein (see Appendix C). As part of the BRA, Jennings Environmental, LLC (Jennings) conducted a background data search for information on plant and wildlife species known occurrences within the vicinity of the Project Site. Jennings evaluated the Project Site in relation to the Western Riverside County MSHCP areas including criteria cells, core habitat, linkages, and areas proposed for conservation. The data review included biological text on general and specific biological resources, and resources considered to be sensitive by various wildlife agencies, local government agencies and interest groups. The Biology Resources Assessment states that according to the California National Diversity Database (CNDDB), the California Native Plant Society Inventory of Rare and Endangered Plants (CNPSIE), and other relevant literature or databases, 47 sensitive species including 10 listed species, and 1 sensitive habitat, have been

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Less Than <br> Significant <br> Impact | No |
| :--- | :---: |
|  | Impact |

documented in the Sunnymead and Perris quads. This list of sensitive species and habitats includes any State and/or federally listed threatened or endangered species, the CDFW designated Species of Special Concern (SSC), and otherwise Special Animals.

A general reconnaissance survey was conducted on January 29, 2023, to identify the potential for the occurrence of special status species, vegetation communities, or habitats that could support special status wildlife species. Below are the findings.

## Flora

The habitat on-site consists of a mix of ruderal vegetation and bare ground. The Project Site shows signs of recent vegetation management in the form of mowing and disking. The plant species observed on-site include Tumble weed (Salsola tragus), London rocket (Sisymbrium irio), Menzie's fiddleneck (Amsinckia menziesii), Wall barley (Hordeum murinum), Stinknet (Oncosiphon pilulifer), Common stork's bill (Erodium cicutarium), Schismus grass (Schismus spp.), and Slender wild oat (Avena barbata). Among the documented vegetation species, no State and/or federally listed threatened or endangered species were observed on-site.

## Fauna

Species observed or otherwise detected on or in the vicinity of the Project Site during the surveys included white-crowned sparrow (Sayornis nigricians), black phoebe (Sayornis nigricans), and house finch (Haemorhous mexicanus).

Based on the January 2023 field survey, the Project Site does not contain suitable habitat for Burrowing owl (Athene cunicularia). The property is continually maintained by mowing or disking. No burrowing owls were observed during the site visit. No portion of the Project Site showed any evidence including burrows, feathers, whitewash, or castings, of past or present burrowing owl activity. Additionally, the Project Site does not contain suitable burrow surrogate species (i.e., California ground squirrel (Otospermophilus beecheyi). Therefore, the Project Site is not suitable for burrowing owl, and this species is considered absent from the Project Site.

Portions of the Project Site and the immediate surrounding area do provide suitable habitat for nesting birds. There are mature trees in the adjacent neighborhoods and the vacant lands provide suitable habitat for other ground nesting species such as killdeer (Charadrius vaciferus). Therefore, potentially significant impacts could occur if construction occurs during the nesting season. Implementation of Mitigation Measure $\mathrm{BIO}-1$ would mitigate any potentially significant impacts.

## Mitigation Measure BIO 1: Migratory Bird Treaty Act.

Nesting bird nesting season generally extends from February 1 through September 15 in southern California and specifically, March 15 through August 31 for migratory passerine birds. To avoid impacts to nesting birds (common and special status) during the nesting season, a qualified Avian Biologist will conduct pre-construction Nesting Bird Surveys (NBS) prior to Project-related disturbance to nestable vegetation to identify any active nests. If no active nests are found, no further action will be required. If an active nest is found, the biologist will set appropriate no-work buffers around the nest which will be based upon the nesting species, its sensitivity to disturbance, nesting stage, and expected types, intensity, and duration of the disturbance. The nests and buffer zones shall be field-checked weekly by a qualified biological monitor. The approved no-work buffer zone shall be clearly marked

## ISSUES \& SUPPORTING <br> INFORMATION SOURCES:

Less Than
Significant
with
Mitigation
Incorporated

| Less Than <br> Significant <br> ImpactNo <br> Impact |
| :---: | :---: |

in the field, within which no disturbance activity shall commence until the qualified biologist has determined the young birds have successfully fledged and the nest is inactive.

The Project Site is not mapped within a criteria cell or subunit of the Multiple Species Habitat Conservation Plan (MSHCP). The Project Site is not located within an area mapped for Narrow Endemic Plant Species, Special Status Species, or protected habitats. The site is mapped within an area for Criteria Area Species Surveys for burrowing owl. However, as stated above this species is considered absent from the Project Site. Therefore, the project is consistent with MSCHP policies and conditions. The Project Site is also not located with or adjacent to any USFWS designated Critical Habitat.

With the implementation of mitigation measure BIO 1, any potential impacts to candidate, sensitive, listed, or special status species, particularly nesting birds, can be reduced to a less than significant level.
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

## Response: Less than Significant Impact

The Project Site is relatively flat, with mixed ruderal vegetation and bare ground. The MSHCP Consistency analysis states, the Project Site is not located within an area mapped for sensitive habitats including Narrow Endemic Plants, Special Status Species, Riparian, Riverine, or Vernal Pools. The Biological Resources Assessment states that the National Wetlands Inventory (NWI) maps did not identify the Project Site containing Riverine or Riparian habitat. The Project Site does not contain hydric vegetation, hydric soils, or wetland hydrology. In order to be classified as a wetland, all three criteria must be present within the Project Site. Additionally, no MSHCP Narrow Endemic Plant species are known to occur in the Project area. Therefore, because the Project Site does not contain any riparian habitat, or other sensitive natural community that conflicts with the USFWS or MSCHP, potential impacts are considered less than significant. No mitigation is required.
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

## Response: No Impact

The Project Site is currently vacant and is currently surrounded by residential and commercial uses. No federal jurisdictional waters, wetlands, and/or streambeds regulated by the CDFW were identified within the Project area. Additionally, as previously stated, the Project Site does not contain hydric soil, hydric vegetation, wetland hydrology, or any habitats such as Riparian, Riverine, or Vernal Pools. Therefore, the Proposed Project would have no impact on, Waters of the U.S., or Waters of the State.

## ISSUES \& SUPPORTING <br> INFORMATION SOURCES:

| Potentially <br> Significant <br> Impact | Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: | :---: | :---: |
| $\square$ | $\square$ | $\square$ |  |

## Response: No Impact

The Project Site is currently vacant and is surrounded by residential and institutional uses. The Proposed Project would not affect wildlife movement, since the parcel is surrounded by urban development and species associated with urban environments are able to navigate these areas. Additionally, according to the California Essential Habitat Connectivity Project, the Project Site is not mapped within an area for aquatic or terrestrial wildlife movement. Therefore, the Proposed Project would not have an impact on any current wildlife corridors.
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

There are no streams, channels, washes, or swales that meet the definitions of Section 1600 of the State of California Fish and Game Code (FGC) under the jurisdiction of the CDFW, Section 401 ("Waters of the State" ) of the Clean Water Act (CWA) under the jurisdiction of the Regional Water Quality Control Board (RWQCB), or "Waters of the United States" (WoUS) as defined by Section 404 of the CWA under the jurisdiction of the U.S. Army Corps of Engineers (Corps) within the subject parcel. Therefore, no permit from any regulatory agency would be required and the Proposed Project would have a less than significant impact on surrounding land uses. No mitigation is required.

## V. CULTURAL RESOURCES - Would the project:

a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

## Response: Less than Significant Impact

A Phase I Cultural Resources Assessment of Master Plot Plan No. PEN22-0238 and Conditional Use Permit No. PEN 22-0176, dated April 2023, was conducted by a Cultural Resources Consultant, Jean A. Keller (see Appendix D) and is summarized herein. A records search was provided by the Eastern Information Center on March 29, 2023, indicating that the subject property had been involved in one previous cultural resources study, conducted in 2017 by LSA. Entitled "Cultural Resources Assessment, Sater Arco Project, City of Moreno Valley, Riverside County, California" (RI-10128), the study included the entirety of what is now PEN220238 and PEN22-0176. During the course of the field survey, a single isolated artifact of historical origin, P-33-027260, was recorded approximately 130 feet northwest of the intersection of Iris Avenue and Oliver Road. The artifact was a fragment of a pre-WWII riveted steel irrigation pipe. The report determined that isolated artifacts, particularly those of historicperiod origin that have no specific association are generally considered not significant and therefore, are not "historical resources" under the California Environmental Quality Act (CEQA). The artifact was left in situ, or its original place and no further research was recommended.

Archival research indicated that a house and stable were built on the subject property in 1894, by Marion Heacock Hotchkiss, a member of one of the founding families of Moreno Valley. Although Marion Hotchkiss sold the subject property in 1899, the structures remained on the property until at least 1939, the last year they were assessed by the Riverside County Assessor. However, cartographic research indicates that at least one structure was located at the southeastern corner of the Project Site until 1978. No structural remains were observed during the current field survey.

Therefore, because there are no structures within the Project Site and the remaining historical artifact is not considered significant, the Project Site would not significantly degrade any historical resources pursuant to $\S 15064.5$.

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Less Than <br> Significant <br> Impact | No |
| :---: | :---: |
| Impact |  |

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to $\S 15064.5$ ?

## Response: Less than Significant with Mitigation Incorporated

The Project Site is located in a well-studied area, with 11 previous cultural resources studies having been conducted within a one-mile radius, most of which have large acreage. During the course of these studies, 22 cultural resources properties have been recorded, one of which was located on the Project Site. With the exception of the isolated historical-era artifact found on the Project Site, all of the remaining sites are Native American bedrock milling sites, although one site also has a small rock shelter and midden. No significant archaeological sites have been recorded in less than a one-half mile radius of the subject property. However, due to the existence of a historical artifact on the Project Site, the presence of another irrigation feature off property, and the number of Native American milling sites within a one mile radius, part-time archaeological monitoring during grading activities is recommended as described in Mitigation Measure CUL-1.

## Mitigation Measure CUL-1:

Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The Project Archaeologist shall have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated the AB 52 tribal consultation process for the Project, has not opted out of the AB52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include:
a. Project grading and development scheduling;
b. The Project archeologist and the Consulting Tribes(s) as defined in CR-1 shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as needed basis;
c. The protocols and stipulations that the contractor, City, Consulting Tribe(s), and Project archaeologist will follow in the event of inadvertent cultural resources discoveries,

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Potentially | Less Than <br> Significant <br> with |
| :---: | :---: |

| Impact | Mitigation <br> Incorporated |

| Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: |

include any newly discovered cultural resource deposits that shall be subject to a cultural resource evaluation.

With the implementation of Mitigation Measure CUL-1, the Proposed Project would have a less than significant impact on historic or archaeological resources within the Project Site and surrounding land uses.
c) Disturb any human remains, including those interred outside of formally dedicated cemeteries?

Response: Less than Significant with Mitigation Incorporated
California Health and Safety Code §7050.5, Public Resources Code § 5097.98, and § 15064.5 of the California Code of Regulations (CEQA Guidelines) mandate procedures to be followed, including that, if human remains are encountered during excavation, all work must halt, and the County Coroner must be notified (Section 7050.5 of the California Health and Safety Code). The coroner will determine whether the remains are of forensic interest. If the coroner, with the aid of the supervising archaeologist, determines that the remains are prehistoric, the coroner will contact the Native American Heritage Commission (NAHC).

With the implementation of Mitigation Measure CUL-1, the Proposed Project would have a less than significant impact on the disturbance on any human remains, including those interred outside of formally dedicated cemeteries.

The NAHC will be responsible for designating the most likely descendant (MLD) responsible for the ultimate disposition of the remains, as required by Section 5097.98 of the Public Resources Code. The MLD should make his/her recommendations within 48 hours of their notification by the NAHC. This recommendation may include:
a. the nondestructive removal and analysis of human remains and items associated with Native American human remains;
b. preservation of Native American human remains and associated items in place;
c. relinquishment of Native American human remains and associated items to the descendants for treatment; or
d. other culturally appropriate treatment. Section 7052 of the Health \& Safety Code also states that disturbance of Native American cemeteries is a felony. With adherence to these existing regulations impacts would be less than significant.

## VI. ENERGY - Would the project:

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

## Response: Less than Significant Impact

## Electricity

Southern California Edison (SCE) currently provides electrical service to the Project area. The demand for electricity associated with the Proposed Project would be for operation of the convenience store, carwash, and fueling station. In 2021, the Commercial sector of the Southern California Edison planning area consumed 5965.998733 GWh of electricity. Based on the CalEEMod 2022 emission output tables for the Proposed Project, the estimated electricity demand is 0.312242 GWH (refer Air Quality Report). The Proposed Project's estimated annual electricity consumption compared to the 2020 annual electricity consumption of the overall Industry Sector in the SCE Planning Area would account for approximately 0.0052337 percent of total electricity consumption. Total electricity demand in SCE's service area is estimated to increase by approximately 12,000 GWh between the years 2015 and 2026. The increase in electricity demand from the Proposed Project is insignificant compared to the projected electricity demand within SCE's service area. Furthermore, the project design and materials would comply with the applicable Building Energy Efficiency Standards. Prior to issuance of a building permit, the City of Moreno Valley shall review and verify that the project plans demonstrate compliance with the current version of the Building Energy Efficiency Standards. The Proposed Project would also be required to adhere to CALGreen, which establishes planning and design standards for sustainable site development, and energy efficiency. No significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

## Natural Gas

Southern California Gas Company currently provides natural gas service to the project area. In 2021, the Commercial sector of the Southern California Gas Company planning area consumed 98.293612 million therms of natural gas. Based on the CalEEMod emission output tables for the Proposed Project, the estimated natural gas demand is $1,552.59$ therms of natural gas per year. The Proposed Project's estimated annual natural gas consumption compared to the 2020 annual natural gas consumption of the overall Industry Sector in the Southern California Gas Company Planning Area would account for approximately 0.0015795 percent of total natural gas consumption. No significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

In summary, the construction and operation of the Proposed Project would not result in the inefficient, wasteful, or unnecessary use of energy. Impacts associated with energy use would be less than significant and no mitigation is required.

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Potentially <br> Significant <br> Impact | Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: | :---: | :---: |
| $\square$ | $\square$ | $\square$ | $\square$ |

## Response: Less than Significant Impact

The California Title 24 Building Code contains energy efficiency standards for residential buildings. These standards address electricity and natural gas efficiency in lighting, water, heating, and air conditioning, as well as the effects of the building envelopes (e.g., windows, doors, walls and roofs, etc.) on energy consumption. As described previously, the Project would comply with the Title 24 California Green Building Standards. Since the Proposed Project would comply with applicable State standards, the Project would not conflict with nor obstruct a state or local plan adopted for the purposes of increasing the amount of renewable energy or energy efficiency. Therefore, this impact would be less than significant, and no mitigation is required.

## VII. GEOLOGY AND SOILS - Would the project:

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to https://www.conservation.ca.gov/cgs/Document s/SP 042.pdf

## Response: Less than Significant Impact

The Project Site is located within the Peninsular Range Geomorphic Province, an area characterized by active northeast trending strike slip faults, including the San Jacinto Fault and the Elsinore Fault. The Project Site is not located within the boundaries of an Earthquake Fault Zone as defined by the Alquist Priolo Earthquake Fault Zoning Act of 1972 (California Geological Survey 2005). There are no known active or potentially active faults that traverse the Project Site and the risk of ground rupture due to a fault displacement beneath the site is low. The closest known fault is the San Jacinto-San Jacinto Valley (San Bernardino) Fault zone approximately 4.1 miles northeast of the Project Site. Therefore, impacts related to earthquake faults would be less than significant. No mitigation is required.
ii) Strong seismic ground shaking?

## Response: Less than Significant Impact

Like all of Southern California, the Project Site will continue to be subject to ground shaking generated from activity on local and regional faults. In addition, the site lies in relatively close proximity to an active fault; therefore, during the life of the proposed improvements, the property

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Potentially |  |
| :---: | :---: |
| Significant <br> Impact | Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated |

| Less Than <br> Significant <br> Impact | No |
| :---: | :---: |
| Impact |  |

will probably experience similar moderate to occasionally high ground shaking from these fault zones, as well as some background shaking from other seismically active areas of the Southern California region. However, the design and construction in accordance with the current California Building Code (CBC) requirements is anticipated to address the issues related to potential ground shaking. With the implementation of California Building Code (CBC) requirement, seismic-related impacts would be less than significant. No mitigation is required.

| iii) $\begin{array}{l}\text { Seismic-related } \\ \text { liquefaction? }\end{array}$ | ground failure, including | $\square$ | $\square$ | $\searrow$ | $\square$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Response: Less than Significant Impact
Liquefaction describes the phenomenon where loosely packed or waterlogged fine-grained sediments near or at the ground surface lose their strength in response to strong ground shaking. There are three basic factors that must exist concurrently in order for liquefaction to occur. These factors include:

- A source of ground shaking, such as an earthquake, capable of generating soil mass distortions;
- A relatively loose silty and/or sandy soil; and
- A relatively shallow groundwater table (within approximately 50 feet below ground surface) or completely saturated soil conditions that will allow positive pore pressure generation.

A Preliminary Geotechnical Engineering Investigation, prepared by Salem Engineering Group, Inc., November 30, 2017 is on-file with the City and is summarized herein. According to the Geotechnical Report, the Project Site is not located within a liquefaction zone. Considering the granular nature of the existing subsoils, along with the absence of groundwater within 50 feet of the surface, potential susceptibility for liquefaction due to an earthquake is considered unlikely. Therefore, a less than significant impact related to this issue would occur. No mitigation is required.
iv) Landslides?

## Response: Less than Significant Impact

The geologic and topographic characteristics of an area, often determine its potential for landslides. Steep slopes, the extent of erosion, and the rock composition of a hillside all contribute to the potential for slope failure and landslide events. In order to fail, unstable slopes typically need to be disturbed; the common triggering mechanisms of slope failure include undercutting of slopes by erosion or grading, saturation of marginally stable slopes by rainfall or irrigation, and shaking of marginally stable slopes during earthquakes. According to the Geotechnical Report the Project Site is not located in an area that is susceptible to landslides. The Upland Game Hunting Area is located approximately 0.4 mile south of the site, which has the potential for landslides. However, the Proposed Project would be required to adhere to applicable regulations regarding the City's Building Ordinance. With the use of these safety regulations, the potential for landslides to occur within the Project Site is considered to be low. Therefore, the impacts related to landslides would be less than significant. No mitigation is required.

## ISSUES \& SUPPORTING INFORMATION SOURCES:

Potentially
Significant
Impact

| Less Than |
| :---: |
| Significant |
| with |
| Mitigation |
| Incorporated |

b) Result in substantial soil erosion or the loss of topsoil? $\square$
Response: Less than Significant
The Project Site is underlain by a mix of Gorgonio loamy sand and Hanford coarse sandy loam. Prior to the issuance of grading permits, the Project proponent would be required to prepare and submit detailed grading plans for the Project Site. These plans must be prepared in conformance with applicable standards of the City's Grading Ordinance.

Construction activities associated with the development of the Proposed Project would expose underlying soils, thus increasing their susceptibility to erosion until the Project is fully developed. Development of the site would involve more than one acre of ground disturbance; therefore, the proposed project is required to obtain a National Pollutant Discharge Elimination System (NPDES) permit. A Storm Water Pollution Prevention Plan (SWPPP) would also be required to address erosion and discharge impacts associated with the proposed onsite grading by implementing appropriate best management practices (BMPs). Adherence to the BMPs contained in the SWPPP would ensure that the potential for soil erosion impacts would be reduced to less than significant with mitigation incorporated levels by implementation of existing water quality regulations. No mitigation is required.
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in onor off-site landslide, lateral spreading, subsidence, liquefaction or collapse?
Response: Less than Significant
Subsidence is the sudden sinking or gradual downward settling of the earth's surface with little or no horizontal movement. Subsidence is caused by a variety of activities, which include, but are not limited to, withdrawal of groundwater, pumping of oil and gas from underground, the collapse of underground mines, liquefaction, and hydro compaction. The Project Site is generally flat and gently slopes down to the northwest. Onsite soils primarily consist of upper 3 to 4 feet of dry, loose and compressible silty fine sand, overlying gravelly fine to medium coarse sand of moderate consistency with scattered rock fragments and rocks. Due to the absence of groundwater within 50 -feet and the relatively flat site topography, the potential susceptibility for onsite soil liquefaction and lateral spreading due to an earthquake is considered low.

No structural fills and/or load bearing foundations and concrete slabs should be constructed bearing directly on the surface soils currently existing on the Project Site. The Project Site is not located within an area that is susceptible to landslides. The Proposed Project would be required to adhere to applicable regulations ensuring building safety and a Final geotechnical report shall be prepared and approved by the City Engineer. Therefore, the impacts would be less than significant. No mitigation is required.

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Potentially <br> Significant <br> Impact | Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: | :---: | :---: |
| $\square$ | $\square$ | $\square$ |  |

## Response: Less than Significant

Expansive soils are fine-grained silts and clays which are subject to swelling and contracting. The swelling and contracting is due to the amount of fine-grained clay materials present in the soils and the amount of moisture either introduced or extracted from the soils. According to the Soils Feasibility Study, 13 onsite soils are considered non-expansive. Additionally, approval of a Final Geotechnical and Soils Report ensure impacts related to soils are reduced to less than significant levels. No mitigation is required.
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

## Response: No Impact

The Proposed Project would connect to existing sewer main lines adjacent to the Project Site. The Proposed Project would not use septic tanks or other alternative wastewater disposal system. Therefore, the development of the project would have no impact related to this issue. No mitigation measures are required.
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

## Response: Less than Significant with Mitigation Incorporated

The Project Site contains Alluvial Fan Deposits which consist of unconsolidated gravel, sand, and silt. Cobble- and boulder-size clasts are also present and become more abundant closer to the hills and mountains. These sediments were eroded from higher elevations, carried by flooding streams and debris flows, and deposited in a fan or lobe shape at the base of the hills. ${ }^{1}$ Based on the geology of the site, construction of the Proposed Project would not impact, either directly or indirectly, any known unique paleontological resource or site of unique geologic features. Given the site's history of disturbance, the potential for undiscovered paleontological or geological resources is considered low. ${ }^{2}$ However, ground-disturbing activities at the Project Site still have the potential to disturb previously unknown resources. With implementation of Mitigation Measure GEO-1, a less than significant impact to paleontological resources would occur.

## Mitigation Measure GEO-1:

If paleontological resources (fossils) are discovered during Project grading, work will be halted in that area until a qualified paleontologist can be retained to assess the significance of the find. The Project paleontologist shall monitor remaining earthmoving activities at the Project Site and shall be equipped to record and salvage fossil resources that may be

[^23]

unearthed during grading activities. The paleontologist shall be empowered to temporarily halt or divert grading equipment to allow recording and removal of the unearthed resources. Any fossils found shall be evaluated in accordance with the CEQA Guidelines and offered for curation at an accredited facility approved by the City of Moreno Valley. Once grading activities have ceased or the paleontologist determines that monitoring is no longer necessary, monitoring activities shall be discontinued. This measure shall be implemented to the satisfaction of the City Planning Division.

## VIII. GREENHOUSE GAS EMISSIONS - Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

## Response: Less than Significant Impact

The City adopted the Moreno Valley Climate Action Plan (CAP) in June 2021. The CAP is designed to reinforce the City's commitment to reducing greenhouse gas (GHG) emissions and demonstrate how the City will comply with State of California's GHG emission reduction standards. As a Qualified GHG Reduction Strategy, the CAP will also enable streamlined environmental review of future development projects, in accordance with the California Environmental Quality Act (CEQA).

However, the City of Moreno Valley has not adopted its own numeric threshold of significance
for determining impacts with respect to Greenhouse Gas (GHG) emissions. A screening threshold of $3,000 \mathrm{MTCO2e} / \mathrm{yr}$. was therefore utilized to determine if additional analysis is required for the Proposed Project).

## Construction Activity GHG Emissions

Project construction activities would generate $\mathrm{CO}_{2}$ and $\mathrm{CH}_{4}$ emissions. As discussed in the Air Quality Impact Analysis, Construction related emissions are expected from the following construction activities:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

Construction was expected to commence in January 2024 and be operational in 2025. The analysis represents a worst-case scenario, as GHG emissions improve over time due to the introduction of new technologies and larger vehicle fleets utilizing energy sources alternative to fossil fuels. For construction phase Project emissions, GHGs are quantified and amortized over the life of the Project. To amortize the emissions over the life of the Proposed Project, the SCAQMD recommends calculating the total GHG emissions for the construction activities, dividing it by a 30 -year Project life then adding that number to the annual operational phase GHG emissions. As such, construction emissions were amortized over a 30-year period and added to the annual operational phase GHG emissions. The amortized construction emissions are presented in Table 6.

Table 6
Greenhouse Gas Construction Emissions
(Metric Tons per Year)

| Total MTCO2e | $\mathbf{1 , 6 3 2}$ |  |  |  |
| Construction Amortized over 30 <br> years | $\mathbf{6 . 7}$ |  |  |  |

Source: CalEEMod 2022 Annual Emissions.

## Operational GHG Emissions

Operational activities associated with the Project will result in emissions of $\mathrm{CO} 2, \mathrm{CH} 4$, and N 2 O from the following primary sources:

- Area Source Emissions
- Energy Source Emissions
- Mobile Source Emissions
- Water Supply, Treatment, and Distribution
- Solid Waste

The annual GHG emissions associated with the operation of the proposed Project are summarized in Table 7. As shown, the Project would generate approximately 1,632 MTCO2e/yr.

| Refrigeration | -- | -- | -- | 317 |
| Construction Amortized 30 Years | 6.7 |  |  |  |
| Total MTCO2e | $\mathbf{1 , 6 3 2}$ |  |  |  |
| County Screening Threshold | 3,000 |  |  |  |
| Significant | No |  |  |  |

Source: CaIEEMod 2022 Annual Emissions.
As depicted in Tables 6 and 7, the Proposed Project would result in a net total of approximately 1,632 MTCO2/yr. The Proposed Project would not exceed the SCAQMD/City's screening threshold of 3,000 MTCO2e/yr. Thus, the Proposed Project would not have the potential to result in a cumulatively considerable impact with respect to GHG emissions. A less than significant impact is anticipated and no mitigation is required.
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?

## Response: Less than Significant Impact

Pursuant to 15604.4 of the CEQA Guidelines, a lead agency may rely on qualitative analysis or performance-based standards to determine the significance of impacts from GHG emissions. As such, the Proposed Project's consistency with SB 32 (2017 Scoping Plan), is discussed in the GHG Analysis, 2017 Scoping Plan Consistency of the GHG Analysis. Consistency with AB 32 and the 2008 Scoping Plan is not necessary, since the target year for AB 32 and the 2008 Scoping Plan was 2020. It should be noted that if the project is commenced and completed after the dates cited in the GHG Analysis then the emissions estimates for the project is a worstcase as greenhouse gas and other air pollutant emissions tend to go down over time due to more stringent emission standards for vehicles which are a primary source of such pollutants.

## SB 32/2017 Scoping Plan Consistency

The 2017 Scoping Plan Update reflects the 2030 target of a $40 \%$ reduction below 1990 levels, set by Executive Order B-30-15 and codified by SB 32. The GHG Analysis overviews the Project's consistency with the 2017 Scoping Plan. As summarized, the Project will not conflict with any of the provisions of the Scoping Plan.

As shown in Tables 6 and 7 of the GHG Analysis, the Project would not conflict with any of the 2017 Scoping Plan elements as any regulations adopted would apply directly or indirectly to the Project. Further, recent studies show that the State's existing and proposed regulatory framework will allow the State to reduce its GHG emissions level to $40 \%$ below 1990 levels by 2030.

## ISSUES \& SUPPORTING <br> INFORMATION SOURCES:

| Potentially |  |  |  |
| :---: | :---: | :---: | :---: |
| Significant <br> Impact | Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |

## City of Moreno Valley General Plan Measure Consistency

The City of Moreno Valley General Plan does not identify specific GHG or climate change policies or goal, a number of the measures identified in the General Plan's Air Quality Element act to reduce or control criteria pollutant emissions and peripherally reduce GHG emissions. As shown in the GHG Analysis, the Proposed Project has been evaluated for consistency with the City's General Plan Air Quality Element. The project is consistent with the City's General Plan.

## City of Moreno Valley Energy Efficiency and CAS (Climate Action Strategy) Consistency

The City of Moreno Valley released an Energy Efficiency and CAS as well as a GHG Analysis for public review on May 8, 2012. The documents were approved on October 9, 2012. The CAS identifies ways that the City can reduce energy and water consumption and GHG emissions as an organization (its employees and the operation of its facilities) and outlines the actions that the City can encourage, and community members can employ to reduce their own energy and water consumption and GHG emissions. The policies in the document are to reduce GHG emissions in 2010 by $15 \%$ by 2020. The City of Moreno Valley General Plan Consistency of the GHG Analysis consists of an analysis of Project consistency with the policies in the CAS. The project has been found to be consistent with the policies in the CAS (unless the policies are not applicable).

Based on this analysis, the Project would not conflict with any applicable plan, policy or regulation, a less than significant impact is expected. No mitigation is required.

2. Title 9 - Planning and Zoning of the Moreno Valley Municipal Code
3. California's 2017 Climate Change Scoping Plan, prepared by the California Air Resources Board, November 2017, https://www.arb.ca.gov/cc/scopingplan/scoping plan 2017.pdf, accessed July 17, 2023.

## IX. HAZARDS AND HAZARDOUS MATERIALS - Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Response: Less than Significant Impact
Potentially hazardous materials such as fuels, lubricants, and solvents would be used during Project construction. The proposed Beyond Food Mart would utilize hazardous materials on a daily basis including gasoline, oil, solvents, and cleaning products. Two underground storage tanks (USTs) (17,000 and 25,000 gallons) are proposed on the south side of the proposed canopy along with 8 MPDs (16 total fueling stations). The transport, use, and storage of hazardous materials during construction and operation of the Proposed Project would be conducted in accordance with all applicable State and federal laws, such as the Hazardous Materials Transportation Act, Resource Conservation and Recovery Act, the California Hazardous Material Management Act, and the California Code of Regulations, Title 22.

## ISSUES \& SUPPORTING INFORMATION SOURCES:

Less Than
Significant
with
Mitigation
Incorporated

| Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: |

The Project Applicant would be required to prepare a Spill Contingency Plan to be filed with the County of Riverside Hazardous Materials Department. All operations of the fueling station and related USTs would be required to comply with all federal, state and local laws regulating the management and use of hazardous materials. These regulations mandate the testing and frequent inspections of the UST facilities.

Development of the Project Site would also be subject to the National Pollutant Discharge Elimination System. Compliance with all applicable laws and regulations would reduce the potential impact associated with the routine transport, use, storage, or disposal of hazardous materials to a less than significant level.

No mitigation is required.
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?
Response: Less than Significant Impact
The Project Applicant would be required to prepare a Spill Contingency Plan to be filed with the County of Riverside Hazardous Materials Department. All operations of the fueling station and related USTs would be required to comply with all federal, state and local laws regulating the management and use of hazardous materials. These regulations mandate the testing and frequent inspections of the UST facilities.

Development of the Project Site would be subject to the National Pollutant Discharge Elimination System (NPDES) permit requirements. Requirements of the permit include development and implementation of a Storm Water Pollution Prevention Plan (SWPPP). The purpose of the SWPPP is to: 1) identify pollutant sources that may affect the quality of discharges of storm water associated with construction activities and 2) identify, construct, and implement storm water pollution control measures to reduce pollutants in storm water discharges from the construction site during and after construction. The SWPPP must include Best Management Practices (BMPs) to control and abate pollutants.

The NPDES also requires a Water Quality Management Plan (WQMP). A Preliminary WQMP has been prepared for the Proposed Project. The WQMP is intended to comply with the requirements of City. Review and approval of the WQMP by the City would ensure that all potential pollutants of concern are minimized or otherwise appropriately treated prior to being discharged from the Project Site.

With regulatory compliance, the Proposed Project would have a less than significant impact related to the release of hazardous materials and no mitigation is required.

## Response: Less than Significant Impact

The nearest school to the Project Site is Landmark Middle School located at 15261 Legendary Drive approximately 0.2 mile north of the Project Site. Hazardous or toxic materials transported in association with construction of the Proposed Project may include items such as oils, paints, and fuels. All materials required during construction would be kept in compliance with State and local regulations.

The handling of hazardous materials or emission of hazardous substances, at the Project Site would be in accordance with a Hazardous Materials Business Emergency Plan prepared for the Proposed Project and administered by the City Fire Prevention Bureau. All hazardous materials would be handled or transported in accordance with California Health and Safety Code Section 25507 and other local, state, and federal standards, ordinances, and regulations.

No mitigation is required.
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

## Response: No Impact

A Phase I Environmental Site Assessment (ESA) for the Proposed Project was completed March 4, 2023 and is included as Appendix E and summarized herein. The assessment concluded that no locations in the immediate adjacency of the Project Site were found to pose any environmental threat to the subject property, based on the data obtained via the Nationwide Environmental Title Research (NETR) governmental records database and the conducted agency records search. There is no indication if the Project Site was once used for agricultural purposes. Dating back to 1967, the Project Site has been vacant and undeveloped with the exception of a structure that once stood on the southeast corner of the property (probably a water tank) but was removed sometime between 1978 and 1996. According to the EnviroStor website and the Phase I ESA, no hazardous material sites on or adjacent to the Project Site were identified. The closest reportable site was the La Jolla Elementary School located approximately 1 mile north of the Project Site. The site type was a school investigation with no action required as of September 8,2003 . The fueling station use would be required to comply with all applicable federal, state, and local laws and regulations regarding hazardous materials. The underground fuel storage tanks would also require permitting and monitoring by the City Fire Department and the County Department of Environmental Health as the Certified Unified Program Agency (CUPA) for Riverside County. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Potentially <br> Significant <br> Impact | Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: | :---: | :---: |
| $\square$ | $\square$ | $\square$ |  |

## Response: No Impact

The Project Site is not located within two miles of an airport or private airstrip. The closest airport is the March Air Reserve Base/March Inland Port Airport, located approximately 3.5 miles to the west of the Project Site. As shown on Map S-7: Airport Land Use Compatibility Zone of the Moreno Valley General Plan, the Proposed Project is located outside of the Airport Influence Area. Therefore, the Proposed Project would have no potential to result in a safety hazard or excessive noise for people residing or working in the Project area, and no mitigation is required.
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

## Response: Less Than Significant Impact

According to the Moreno Valley Local Hazard Mitigation Plan (LHMP), emergency evacuation routes within the City includes I-215, SR-60, and major roadways adjacent to the Project Site including Iris Avenue and Oliver Street, and Alessandro Boulevard which is 1.5 miles north of the Project Site. When responding to emergencies, the City uses the Standardized Emergency Management System (SEMS) which provides preparedness, response, recovery, and mitigation to a disaster event. It is not anticipated that development of the Project Site would impair implementation of or physically interfere with the LHMP, SEMS, or other emergency plans because site activities would be confined within the Proposed Project. The proposed onsite parking and circulation plans would be in accordance with the City of Moreno Valley Municipal Code Chapter 9.11: Parking, Pedestrian and Loading Requirements. And reviewed by the Fire Department and City Engineering Department to ensure that the Proposed Project's ingress/egress are adequate for accommodating emergency vehicles. Therefore, through compliance with the City's established LHMP and Municipal Code, and through review of the Project by the Fire Department and City Engineering Department, the potential for the Project to physically interfere with an adopted emergency response plan, or evacuation plan is less than significant. No mitigation is required.
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

## Response: Less Than Significant Impact

As further discussed in Section XX Wildfire, the Project Site is not located within a Fire Hazard Severity Zone (FHSZ) as defined in the Fire Hazard Severity maps from CALFIRE and the
Less Than
Significant
with
Mitigation
Incorporated

## X. HYDROLOGY AND WATER QUALITY - Would the project:

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

## Response: Less than Significant Impact

A Preliminary Hydrology Study dated December 2022 and revised April 27, 2023, and a Project Specific WQMP dated November 7, 2022, and revised April 19, 2023, was prepared by Blue Engineering and Consulting, Inc. for the Project Site (see Appendices F and G). Findings of the reports are discussed herein. The Project Site is currently undeveloped and is composed of 100 percent pervious surfaces due to routine disking. Construction of the Project will involve site clearing, rough grading, compaction, pouring of concrete and asphalt, and construction of the structures. The Project Site clearing and grading phases would disturb vegetation and surface soils, potentially resulting in erosion and sedimentation. If left exposed and with no vegetative cover, the Project Site's bare soil could be subject to additional wind and water erosion. Since the Proposed Project involves over one acre of ground disturbance, it is subject to National Pollution Discharge Elimination System (NPDES) requirements and must implement a Storm Water Pollution Prevention Plan (SWPPP). Implementation of site-specific best management practices (BMPs), as established by the SWPPP, will ensure all impacts related to erosion and sedimentation from ground disturbance are less than significant. Examples of BMPs include sandbag barriers, geotextiles, storm drain inlet protection, sediment traps, rip rap soil stabilizers, sweep roadway from track-out, and rumble strips.

Under existing conditions, the Project Site drains in a northwesterly direction toward the Kaiser Permanente Hospital. The Proposed Project includes a storm water detention system with one underground bioretention basin with a capacity of 15,237 cubic feet (CF) that would be located on the northwest portion of the project Site and one vegetation swale located off site near the northeast corner of the Project, along Oliver Street (refer to Site Plan). To address potential

## ISSUES \& SUPPORTING INFORMATION SOURCES:

Potentially

water contaminants, the Project is required to comply with applicable federal, state, and local water quality regulations in accordance with the Project specific NPDES and SWPPP. Given compliance with all applicable federal, state, and local laws regulating surface water quality, the Proposed Project as designed would result in a less than significant impact. No mitigation is required.

Prior to the issuance of a grading permit, the Project applicant shall prepare a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP shall include a surface water control plan and erosion control plan citing specific measures to control on-site and off-site erosion during the entire grading and construction period. In addition, the SWPPP shall emphasize structural and nonstructural Best Management Practices (BMPs) to control sediment and non-visible discharges from the site. The SWPPP will include inspection forms for routine monitoring of the site during construction phase to ensure NPDES compliance and additional BMPs and erosion control measures will be documented in the SWPPP and utilized if necessary. The SWPPP shall address the potential for an extended and discontinuous construction period based on funding availability. The SWPPP will be kept on site for the entire duration of Project construction and will be available to the local RWQCB for inspection at any time. BMPs included in the SWPPP may include the following:

- Sediment discharges from the site may be controlled by the following: sandbags, silt fences, straw wattles, and temporary basins (if deemed necessary), and other discharge control devices. The construction and condition of the BMPs will be periodically inspected during construction and repairs will be made when necessary, as required by the SWPPP.
- Materials that have the potential to contribute to non-visible pollutants to storm water must not be placed in drainage ways and must be contained, elevated, and placed in temporary storage containment areas.
- All loose piles of soil, silt, clay, sand, debris, and other earthen material shall be protected in a reasonable manner to eliminate and discharge from the site. Stockpiles will be surrounded by silt fences and covered with plastic tarps.
- In addition, the construction contractor shall be responsible for performing and documenting the application of BMPs identified in the SWPPP. Weekly inspections shall be performed on sandbag barriers and other sediment control measures called for in the SWPPP. Monthly reports and inspection logs shall be maintained by the Contractor and reviewed by the City and the representatives of the State Water Resources Control Board. In the event that it is not feasible to implement specific BMPs, the City can make a determination that other BMPs will provide equivalent or superior treatment either on or off site.

The WQMP includes mandatory compliance of BMPs as well as compliance with NPDES Permit requirements. Review and approval of the WQMP by the City of Moreno Valley and the SWPPP by the Regional Water Quality Control Board would ensure that all potential pollutants of concern are minimized or otherwise appropriately treated prior to being discharged from the Project Site. Therefore, the Proposed Project would result in less than significant impacts..

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Potentially <br> Significant <br> Impact | Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: | :---: | :---: |
| $\square$ | $\square$ | $\square$ | $\square$ |

## Response: Less than Significant Impact

Groundwater in the Project Site area is managed and distributed by the Eastern Municipal Water District (EMWD) a regional water management and wholesale agency. The City of Moreno Valley is within the boundaries of the EMWD. The EMWD is required by state law (Urban Water Planning Management Act or AB 797 in 1983) to prepare an Urban Water Management Plan (UWMP) to identify its sources/supplies of potable water, its historical and projected consumption by its customers, and evaluate various mandated scenarios for water shortages (e.g., single dry year, and multiple dry years) to assure its customers and the state that it will have adequate water supplies now and in the future, even under expected drought conditions.

The 2020 UWMP concluded the City could supply water to its customers until at least 2040 under single dry and multiple drought year scenarios. The Project does not involve a General Plan Amendment or Zone Change, so the City in its UWMP has accounted for future water consumption of existing and planned land uses, including residential and commercial uses such as the Proposed Project.

The Project is also subject to NPDES requirements and will be designed and constructed to ensure compliance with the water quality standards and waste discharge requirements. Compliance with these regulations, along with all City water supply requirements, will ensure there will be no significant impacts related to groundwater supply or recharge resulting from the Proposed Project. A less than significant impact would occur related to this issue and no mitigation is required.
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:
i) Result in substantial erosion or siltation on- or off-site?

## Response: Less than Significant Impact

Development of the Proposed Project's buildings and pavement will alter the amount of existing impervious surface area and the amount of generated storm water runoff. Currently, the site has a 4.4 percent slope and runoff generally drains from the southeast to the northwest. No streams, rivers, or other drainage features are located on site. The Proposed Project would implement structures and impervious surfaces that could potentially alter the current drainage pattern. Pursuant to the requirements of the NPDES permit, as discussed previously, excess flows and sediment would be captured by BMPs identified in the WQMP. The Proposed Project's WQMP is subject to review and approval by the City prior to issuance of grading permits. With implementation of required BMPs, the Proposed Project is not expected to result in substantial erosion or siltation. Therefore, impacts would be less than significant, and no mitigation is required.

## ISSUES \& SUPPORTING INFORMATION SOURCES:

Potentially
Significant
Impact

| Less Than | Res Than | No |
| :---: | :---: | :---: |
| Significant | Less Than <br> with <br> Mitigation <br> Incorporated | Impact |
| Impact |  |  |

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?
$\square \square$

Response: No Impact
No streams, rivers, or other drainage features are located on the Project Site. The Project proposes a storm water detention system with one underground bioretention basin with a capacity of 15,237 cubic feet (CF) that would be located on the northwest portion of the Project Site and one vegetation swale located off near the northeast corner of the Project Site, along Oliver Street (refer to Site Plan). The stormwater infiltration system would prevent flows that could result in on- or off-site flooding. Since the Proposed Project does not significantly increase storm water flows, no impact related to flooding would occur. No mitigation is warranted.
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

## Response: Less than Significant Impact

The existing Project Site slopes down from the southeast to the northwest toward the Moreno Valley Hospital. The Project proposes a storm water detention system with one underground bioretention basin with a capacity of 15,237 cubic feet (CF) that would be located on the northwest portion of the Project Site and one vegetation swale located off near the northeast corner of the Proposed Project, along Oliver Street (refer to Site Plan). The nature of the proposed development would not generate flows previously unaccounted for in drainage plans. The Proposed Project will incorporate BMPs that will moderate flows into existing storm drain systems. As the Proposed Project would maintain drainage patterns and flow rates comparable to the existing condition, a less than significant impact would occur with the development of the Proposed Project, and no mitigation is warranted.
iv) Impede or redirect flood flows?

## Response: No Impact

The Project Site is not located within a 100-year flood hazard area and does not include the development of housing. Therefore, the Project would not place a structure within a 100-year flood hazard area that would impede or redirect flood flows. No impact would occur, and no mitigation is required.

Two locations of concern exist within the City of Moreno Valley: Poorman Reservoir (Pigeon Pass Reservoir) and Lake Perris. Dam failure at Portman's Reservoir could result in extensive flooding along the downstream watercourse. Dam failure at Lake Perris would only affect a very small area south of Nandina Avenue along the Perris Valley Storm Drain and the Mystic Lake area in the southeast corner of the City. However, according to the City's General Plan, the Project Site will not expose people or structures to a risk of loss, injury or death involving the failure of a levee or dam. Therefore, no impacts would occur, and no mitigation is required.

## ISSUES \& SUPPORTING <br> INFORMATION SOURCES:

Potentially
Significant
Impact

| Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: | :---: |
| $\square$ | $\square$ |  |

## Response: No Impact

The Project Site is located approximately 2 miles north of Lake Perris. At this distance, the Project Site is not considered susceptible to seiche-related hazards originating at Lake Parris. Additionally, the Upland Game Hunting Area is located between the Project Site and Lake Perris, initially creating a buffer from the Project Site and the waterbody. The Project Site and Lake Perris have an elevation of approximately 1560 feet above mean sea level (amsl) while the Upland Game Hunting Area hills are approximately 1813 feet amsl which approximately 253 feet above the Project Site. The Project Site is at an elevation of approximately 1,560 feet amsl and is located approximately 42 miles northeast of the Pacific Ocean. Therefore, the Proposed Project is not subject to flood hazards, tsunami threats, or seiche zones, and no impact would occur.
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?
Response: Less than Significant Impact with Mitigation Incorporated
The Proposed Project would be required to comply with the Regional Water Quality Control Board's Santa Ana River Basin Water Quality Control Program, which includes the requirement to complete and submit a SWPPP for construction related activities. The Proposed Project is in a developed urban setting and through adherence to the City of Moreno Valley's water quality regulations it would not substantially degrade water quality. Therefore, a less than significant impact would occur with implementation of the recommended mitigation measures. No additional mitigation measures are required.

## XI. LAND USE AND PLANNING - Would the project:

a) Physically divide an established community?

## Response: No Impact

The physical division of an established community is typically associated with construction of a linear feature, such as a major highway or railroad tracks, or the removal of a means of access, such as a local road or bridge, which would impair mobility in an existing community or between a community and outlying area.

The Project proposes the development of a Beyond Food Mart on land designated as Downtown Center (DC). To the north and west is vacant land and the Kaiser Permanente Moreno Valley Hospital while residential communities are located to the south and east. The Project would not introduce linear features such as highways or transit lines that would divide an established community. Therefore, no impact regarding dividing an established neighborhood would occur, and no mitigation is required.
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

## Response: Less than Significant Impact

The Project Site is currently undeveloped, and the General Plan designates the site as Downtown Center (DC), which allows for commercial uses. The City's General Plan contains goals and objectives that are applicable to the Proposed Project and the DC land use designation. Additionally, the Proposed Project is located within the Multiple Species Habitat Conservation Plan (MSHCP) Moreno Valley Area Plan; however, the Proposed Project is not located in a criteria cell and is not adjacent to Public/Quasi-Public or Conservation Land. The Project is located within the MSHCP survey area for burrowing owl. Because the Proposed Project is not located within a Criteria Cell, it is not subject to possible land conservation requirement under the MSHCP. Therefore, development of the Proposed Project would have a less than significant impact related to an applicable land use plan, policy, regulation, or habitat conservation plan and no mitigation is required.

Table 8, General Plan Consistency Analysis provides a consistency analysis of the Proposed Project to the applicable General Plan goals and objectives, which identifies that the Project would not result in a conflict with any applicable General Plan goals and objectives.

Table 8
General Plan Consistency Analysis

| Goal/Policy No. | General Plan Goal and Objectives | Project Consistency |
| :---: | :---: | :---: |
| Land Use Element |  |  |
| Goal LCC-1 | Establish an identifiable city structure and a flexible land use framework that accommodates growth and development over the planning horizon. | Consistent. The Proposed Project would provide a mix of commercial related uses that supports the Downtown Center. |
| Goal LCC. 1-4 | Focus new development in centers and corridors so as to support the vitality of existing businesses, optimize the use of utility infrastructure, and reduce vehicle trip frequency, length, and associated emissions. | Consistent. The Proposed Project would develop a vacant lot in the Downtown Center zone. The new development would benefit local residence by providing fuel and convenience goods, which would minimize vehicle trips to further destinations. |
| Goal LCC. 1-5 | Encourage mixed use development in either a vertical or horizontal configuration in the Downtown Center, the Moreno Valley Mall/Towngate Center area, and at key intersection along major transit routes. | Consistent. The Proposed Project would support the Downtown Center urbanization by promoting local community commercial uses such as a convenience store, car wash, and fueling stations |

## Circulation Element

| Goal C. 1-1 | Support regional <br> infrastructure investments for <br> all modes to relieve <br> congestion and support <br> healthy communities in the <br> City of Moreno Valley. |
| :--- | :--- |

N/A. The Proposed Project does not provide for regional infrastructure.

|  |  | subjected to seismic activity, in accordance with the California Building Code. | prevent future seismic hazards. |  |
|  | Goal S. 1-12 | Work to prevent wildland fire and to protect lives, property, and watersheds from fire dangers. | Consistent. The Project Site is not within Wildfire Hazard Severity Zone, but is within a Local Response Area. County Fire Department 91 will respond to any potential wildfire threats. The Proposed Project would add impervious surfaces and maintained landscape areas across the site. |  |
|  | Goal S. 1-25 | Consistent with State regulations, require proper storage and disposal of hazardous materials to reduce the likelihood of leakage, explosions, of fire, and to properly contain potential spills from leaving the site. | Consistent. The Proposed Project will adhere to the Storm Water Pollution Prevention Plan (SWPPP), the National Pollutant Discharge Elimination System (NPDES), and the California Building Code to prevent any potential spills from leaving the site. |  |
|  | Noise Element |  |  |  |
|  | Goal N-1 | Design for a pleasant, healthy sound environment conducive to living and working. | The Proposed Project will adhere to the City's noise thresholds and Municipal Code Standards. |  |
|  | Environmental Justice Element |  |  |  |
|  | Goal EJ-1 | Reduce pollution exposure and improve community health. | The Proposed Project would be an acceptable use within the City Air Quality Standards. |  |
|  | Open Space and Resource Conservation Element |  |  |  |
|  | Goal OSRC-1 | Preserve, protect, and enhance natural resources, habitats, and watersheds in Moreno Valley and the surrounding area, promoting responsible management practices. | (Not sure if this is needed, could put N/A) |  |
|  | Goal OSRC. 1-7 | Require that grading plans include appropriate and feasible measures to minimize erosion, sedimentation, wind erosion, and fugitive dust. Particularly in hillside areas, new roadways, and trails should follow natural contours to minimize grading. | Consistent. According to the LHMP Moreno Valley Slope Analysis, the Project Site and its surrounding land uses do not have any significant slope. Additionally, grading plans will include appropriate erosion mitigation measures. |  |

| OU OU the |  |

Zoning for the Project Site is Downtown Center (DC) which allows up to 20 DU/AC on the Project Site on the periphery of the DC (CMVMC 9.07.010B). The Project proposes commercial uses which would be consistent with the DC land use designation. Therefore, the Proposed Project is consistent with the General Plan's goals and policy's and will not significantly detriment the Project Site's environment or surrounding land uses.

## XII. MINERAL RESOURCES - Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

## Response: No Impact

The Project Site is vacant and undeveloped. The mineral resources known to occur within the City of Moreno Valley include sand, gravel and rock used in making concrete and as road base. According to the City's General Plan, one recently active sand and gravel quarry is known to occur within the City's sphere of influence: the Jack Rabbit Canyon Quarry. The Jack Rabbit Canyon Quarry was inactive as of 2001 and is located in a drainage course at the northeast corner of Jack Rabbit Trail and Gilman Springs Road approximately 6.5 miles west of the Project Site. According to the Department of Conservation Mineral Lands Classification interactive map and General Plan, the Project Site is located within an area classified as MRZ-3. MRZ-3 areas are considered to have a moderate potential for the discovery of economic mineral deposits. The Project Site has a current General Plan land use designation of Commercial and zoning of Downtown Center (DC). Mineral resource mining would not be compatible with the surrounding land uses and the General Plan designation for the Project Site. Moreover, the Proposed Project's demand for mineral resources will be considered less than significant due to the readily available aggregate resources in the Southern California region. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.
b) Result in the loss of availability of a locallyimportant mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

## Response: No Impact

As discussed previously, there are no significant mineral resources or mineral extraction process facilities on or near the site. The City previously planned for development of the Project Site and a Downtown Center Concept Area. Implementation of the Proposed Project would not result in the loss of availability of a known locally significant mineral resource. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.

## XIII. NOISE - Would the project result in:

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

## Response: Less than Significant Impact

A Noise Impact Analysis prepared by Ganddini Group Inc. was completed on July 7, 2023 (see Appendix H). The Noise Study determines the noise exposure and the necessary noise mitigation measures for the Proposed Project. The noise study was prepared to satisfy applicable City of Moreno Valley noise standards and significance criteria based on Appendix G of the CEQA Guidelines. The Noise Study is available for review at the City of Moreno Valley Community Development Department and results of the study are summarized herein.

Environmental noise descriptors are generally based on averages, rather than instantaneous, noise levels. The most used metric is the equivalent level (Leq). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A- weighted decibels (dBA). The equivalent sound level (Leq) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period and is commonly used to describe the "average" noise levels within the environment.

## Construction Noise

Construction noise is regulated within Sections 8.14.040 and 11.80.030(D)(7) of the City of Moreno Valley Municipal Code (see Regulatory Setting section of the Noise Report). Accordingly, the project would result in a significant impact if:

- Project construction occurs outside the hours of 7:00 AM to 7:00 PM Monday through Friday, excluding holidays, and from 8:00 AM to 4:00 PM on Saturday; or,
- Project construction occurs within the hours of 8:00 PM and 7:00 AM the following day such that the sound there from creates a noise disturbance; or,
- Project construction noise exceeds 80 dBA Leq for an 8-hour period at residential uses and 85 dBA Leq for an 8 -hour period at commercial uses.

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Significant | with |
| Impact | Mitigation |
|  | Incorporated |

| Less Than | No |
| :--- | :---: |
| Significant |  |
| Impact |  |$\quad$ Impact

Project construction noise levels at nearby sensitive receptors were calculated using the FTA methodology. Construction noise modeling worksheets for each phase are provided in Appendix H Anticipated noise levels during each construction phase are presented in Table 10 of the Noise Study.

Table 10 of the Noise Study (referenced in Appendix H, shows that modeled construction noise levels reach up to 59 dBA Leq at the nearest school property line to the northeast, 74.1 dBA Leq at the nearest residential property line to the east, 70.8 dBA Leq at the nearest residential property line to the south, 65.8 dBA Leq at the nearest hospital property line to the west, and 66.7 dBA Leq at the nearest medical office property line to the northwest of the Project Site.

Based on the modeled construction noise levels (, construction noise levels are estimated to reach up to 74.1 dBA Leq at the nearest receptor. Therefore, the Proposed Project would not exceed City-established standards relating to construction noise of 80 dBA Leq at residential uses and 85 dBA Leq at commercial uses. Construction-related noise impacts are less than significant and no mitigation is required.

## Stationary Source Noise

Stationary noise source standards are established within Section 11.80.030-2 of the City of Moreno Valley Municipal Code. Accordingly, the project would result in a significant impact if:

- The project operational noise exceeds the City-established noise standards that apply to project. Project generated on-site noise may not 60 dBA Leq during the daytime (8:00 AM to 10:00 PM) and 55 dBA Leq during nighttime hours (10:01 PM to 7:59 AM) at residential land uses; or exceed 65 dBA Leq during the daytime (8:00 AM to 10:00 PM) and 60 dBA Leq during nighttime hours (10:01 PM to 7:59 AM) at commercial land uses (City of Moreno Municipal Code 11.80.030).

Noise levels at nearby sensitive receptors were determined based on the SoundPLAN acoustical model developed for the project. SoundPLAN modeling worksheets are provided in the Noise Impact Analysis.

The project will not exceed City-established daytime noise standards at the existing residential lots but would exceed nighttime noise standards at residential lots located south of the project site if the car wash is operated during nighttime hours. Impacts will be less than significant by limiting hours of operation of the proposed car wash and associated vacuums. The car wash shall not be in operation between 10:00 PM and 8:00 AM.

## Mobile Source Noise

## Project Operational Mobile Source Noise

Roadway noise levels were calculated at roadways included in the Beyond Food Mart (Oliver and Iris) Traffic Impact Analysis (Ganddini Group, Inc., April 14, 2023) and based on the FHWA Traffic Noise Prediction Model methodology. During operation, with incorporation of pass-by trip reductions, the proposed project is expected to generate approximately 4,346 average daily trips with 155 trips during the AM peak-hour and 185 trips during the PM peak-hour. Roadway noise levels were calculated for the following scenarios:

## ISSUES \& SUPPORTING <br> INFORMATION SOURCES:

|  | Less Than |
| :---: | :---: |
| Potentially | Significant |
| Significant | with |
| Impact | Mitigation |
|  | Incorporated |

Incorporated

- Existing (without Project): This scenario refers to existing year traffic noise conditions.
- Existing Plus Project: This scenario refers to existing year plus project traffic noise conditions.

Table 11 of the Noise Study (referenced in Appendix H) shows the change in existing roadway noise levels with the addition of project-generated operational trips.

Modeled existing traffic noise levels range between 58-76 dBA CNEL and the modeled Existing Plus Project traffic noise levels range between 59-76 dBA CNEL at the right-of-way of each study roadway segment. All the modeled roadway segments, other than John F Kennedy Way east of Moreno Beach Drive, are below the lowest threshold of a 1.5 dB increase. The modeled existing noise level along the roadway segment of John F Kennedy Way east of Moreno Beach Drive is 64.5 dBA CNEL and the project generated vehicle trips are anticipated to increase the noise level along this roadway segment by approximately 1.7 dBA CNEL. Therefore, the appropriate threshold for this roadway segment is an increase of 3 dB . The approximately 1.7 dB increase along John F Kennedy Way is below the 3 dB increase threshold.

The addition of project trips is not expected to change noise levels in excess of the applicable threshold at any of the study roadway segments. The project impact is less than significant; no mitigation is required.

## Construction Mobile Source Noise

Construction truck trips would occur throughout the construction period. Given the project site's proximity to the 215 Freeway and State Route 60, it is anticipated that vendor and/or haul truck traffic would take the most direct route to the appropriate freeway ramps.

Iris Avenue currently handles approximately 16,000 average daily vehicle trips and Oliver Street currently handles approximately 2,300 average daily vehicle trips in the vicinity of the project site. 8 According to the CaIEEMod modeling in the Air Quality Study prepared for the Proposed Project (Lilburn, 2023), the greatest number of construction-related vehicle trips per day would be during the demolition and paving phases of construction at up to 13 vehicle trips per day ( 12.5 worker trips per day for both demolition and paving). Therefore, vehicle traffic generated during project construction is nominal relative to existing roadway volumes and would not result in the doubling of traffic volume necessary to increase noise levels by 3 dBA . The Proposed Project would have a less than significant; no mitigation is required.
b) Generation of excessive groundborne vibration or groundborne noise levels?
Response: Less than Significant Impact
In relation to the Environmental Checklist noise issue "b", the City of Moreno Valley has not established thresholds of significance concerning groundborne vibration. In the absence of City-established thresholds, groundborne vibration impacts are based on guidance from the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual (FTA, September 2018) (see Regulatory Setting section). Accordingly, the project would result in a significant impact if:

- Groundborne vibration levels generated by the project have the potential to cause architectural damage at nearby buildings by exceeding the following PPV:

| Less Than |  |  |
| :---: | :---: | :---: |
| Significant | Less Than | No |
| with | Significant | Impact |
| Mitigation | Impact |  |
| Incorporated |  |  |

- $0.10 \mathrm{in} / \mathrm{sec}$ at buildings extremely susceptible to vibration damage
- $0.20 \mathrm{in} / \mathrm{sec}$ at non-engineered timber and masonry buildings
- $0.30 \mathrm{in} / \mathrm{sec}$ at engineered concrete and masonry (no plaster) buildings
- $0.50 \mathrm{in} / \mathrm{sec}$ at reinforced-concrete, steel or timber (no plaster) buildings
- Groundborne vibration levels generated by the project have the potential to cause annoyance at sensitive receptors by exceeding 72 VdB .

Based on the groundborne vibration modeling, use of a vibratory roller is expected to generate a PPV of $0.021 \mathrm{in} / \mathrm{sec}$ and use of a bulldozer is expected to generate a PPV of $0.009 \mathrm{in} / \mathrm{sec}$ at the closest off-site building, a residential use located approximately 115 feet east of the Project Site. Other equipment anticipated to be used during project construction generate lower PPV. Therefore, groundborne vibration generated by project construction would not exceed the levels necessary to cause architectural damage. Use of vibratory rollers could theoretically exceed the threshold for annoyance due to vibration ( 72 VdB at offsite residential sensitive uses) at the existing residential receptor to the east of the project site, and residents may be temporarily annoyed. However, perceptibility of construction vibration would be temporary and would only occur while vibratory equipment is utilized within 21 feet of the project property lines in proximity of the residential use to the east. Furthermore, this impact would only occur during daytime hours. The most substantial sources of groundborne vibration during post-construction project operations will include the movement of passenger vehicles and trucks on paved and generally smooth surfaces. Loaded trucks generally have a PPV of 0.076 at a distance of 25 feet (Caltrans 2020), which is a substantially lower PPV than that of a vibratory roller ( $0.210 \mathrm{in} / \mathrm{sec}$ PPV at 25 feet). Therefore, groundborne vibration levels generated by project operation would not exceed those modeled for project construction and the Proposed Project would result in a less than significant impact. No mitigation is required.
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

## Response: No Impact

The closest airport to the Project Site is the March Air Reserve Base/Inland Port Airport, with airport runways located as close as approximately 2.26 miles to the west/southwest of the Project Site. The City of Moreno Valley 2040 General Plan Map S-7, Airport Land Use Compatibility Zones and the Riverside County Airport Land Use Commission March Air Reserve Base / Inland Port Airport Land Use Compatibility Plan Map MA-1 (ALUCP 2014), show that the Project Site is outside of both the airport influence areas as well as the airport's compatibility zones. Therefore, the Proposed Project would not expose people residing or working in the area to excessive noise levels. There is no impact, and no mitigation is required.

## XIV. POPULATION AND HOUSING - Would the project:

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?

## Response: Less than Significant Impact

During the construction process, the Proposed Project would create short-term construction jobs and are anticipated to be filled primarily by workers who reside in the Project vicinity. The Proposed Project would generate a maximum of 12 employees. New employment opportunities are projected to be filled by local residents who reside in or near the City of Moreno Valley. The current city unemployment rate is $4.8 \% .^{3}$ A large influx of new residents to the City due to the Proposed Project is not expected.

The Proposed Project will not have a direct effect on population growth within the City. The Proposed Project would generate employment opportunities but is not expected to induce substantial growth in the City or region beyond the growth forecasts detailed in the City's General Plan or SCAG's regional growth forecasts since the Proposed Project is consistent with the existing land use and zoning designations (i.e., Commercial). Therefore, a less than significant impact related to this issue, and no mitigation is required.
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

## Response: No Impact

The Proposed Site is currently vacant and does not contain any residences that would be removed as a result of the Proposed Project. Therefore, the Proposed Project would not displace a substantial number of existing housing or residences so as to necessitate the construction of replacement of housing. No impact would occur with respect to the displacement of existing housing, and no mitigation is required.

## XV. PUBLIC SERVICES - Would the project:

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:
i) Fire protection?

Response: Less than Significant Impact
The Proposed Project would place a Beyond Food Mart on undeveloped land. The City of Moreno Valley Fire Service contracts with the Riverside County Fire Department Services. Fire Station 91 (College Park) is the closest station to the site located at 16110 Lasselle Street approximately 1.4 miles southwest. Fire Station 91 houses one 75 -foot ladder truck, one second line engine and a breathing support. Because the Project proposes a fueling station, fire services may be needed at a quick response time. According to the City's General Plan, a fiveminute response time is considered to be the maximum time standard for serving urban and suburban uses. However, the need for fire services to the Project Site is considered unlikely. Considering this, the Proposed Project will have a less than significant impact on fire protection. No mitigation is required.
ii) Police protection?

## Response: Less than Significant Impact

The Project includes the development of a Beyond Food Mart on the northwest corner of Iris Avenue and Oliver Street. Police services are provided by the Moreno Valley Police Department (MVPD) which has 162 sworn officers and a current officer to population ration of 0.9 officers per 1,000 populations. The nearest police station is located at 22850 Calle San Juan De Los Lagos approximately 4.8 miles west northwest of the project site. The Project could introduce a maximum of 12 new employees to the City, which would incrementally increase the need for police. Therefore, development of the Proposed Project would have a less than significant impact on police protection. No mitigation is required.
iii) Schools?

## Response: No Impact

The Project Site is located within the boundaries of Moreno Valley Unified School District (MVUSD) and is near several schools. The closest school is Landmark Middle School is located four tenths (0.4) of a mile northeast of the Project Site, at the intersection of Oliver Street and John F Kennedy Drive. Other school establishments located near the Project Site are La Jolla Elementary School, Moreno Valley College, Ridge Crest Elementary School, Valley Christian Academy, and Vista del Lago High School.

The increase in employment from the Proposed Project is anticipated to be fulfilled by the local, existing population. Additionally, the Beyond Food Mart development would not generate school aged children. Therefore, no impact would occur related to this issue and no mitigation is required.

## ISSUES \& SUPPORTING <br> INFORMATION SOURCES:

| Potentially <br> Significant <br> Impact | Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: | :---: | :---: |
| $\square$ | $\square$ | $\square$ |  |

## Response: No Impacts

The City of Moreno Valley currently operates approximately 482 acres of parks within the City boundaries. The City has established a park service standard of 3.0 acres of parkland per 1,000 residents to ensure that access to parks is adequate and commensurate with the size of the community. The nearest parks to the Project Site are Celebration Park and Fairway Park, both being approximately half (0.5) a mile northeast of the Project Site. Implementation of the Proposed project would not induce residential development and would not significantly increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of any facilities would result. Therefore, no significant adverse impacts are identified or anticipated, and no mitigation measures are required.
v) Other public facilities?

## Response: Less than Significant Impact

Implementation of the Proposed Project would not induce population growth in the City of Moreno Valley or adversely affect other public facilities or require the construction of new or modified facilities. The Proposed Project is not expected to have a significant impact on public facilities or services, such as libraries, community recreation centers, and/or animal shelters. The Proposed Project would introduce a maximum of 12 employees into the City. Because the Proposed Project would not introduce a substantial amount of population into the City of Moreno Valley, development of the Proposed Project would have a less than significant impact. No mitigation is required.

## XVI. RECREATION - Would the project:

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

## Response: No Impact

The Proposed Project includes the construction of a Beyond Food Mart on the corner of Iris Avenue and Oliver Street. The Project would generate a maximum of 12 employees and may contribute to residents working and living in the City of Moreno Valley. The closest parks to the Proposed Project are the Fairway Park and Celebration Park approximately half a mile (0.5)

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: | :---: |

mile north of the Project Site. The Project would be required to pay development fees to offset the impact to parks and recreation. Therefore, with the development of the Proposed Project, it will not create a significant increase in the use of existing neighborhood, regional parks, or other recreational facilities, with a less than significant impact related to this issue. No mitigation is required.
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?

## Response: No Impact

The Proposed Project does not include any recreational facilities or parkland. Furthermore, the Project does not include any residential development and will not directly increase population associated with the Proposed Project. The Project will also be required to pay applicable development fees to offset the impact to parks and recreation. Therefore, the construction or expansion of recreational facilities in the absence of a population increase is not necessary. No impact would occur regarding this issue. No mitigation is required.

## Sources:

1. Moreno Valley General Plan, adopted June 15, 2021

## XVII.TRANSPORTATION - Would the project:

a) Conflict with program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

## Response: Less than Significant Impact

A Traffic Impact Analysis (TIA) dated May 12, 2023 (see Appendix I), and a Vehicle Miles Traveled (VMT) Screening Assessment dated April 11, 2023 (see Appendix J) was orchestrated by Ganddini Group, Inc. and is available for review at City offices. The TIA and VMT Assessment analyzed the Site Plan, which is a 1.31 -acre lot to be developed with a $7,460 \mathrm{sf}$ convenience store, an eight island fueling station with a 5,979 sf canopy, and a sf drive-thru car wash. As detailed in Table 9 below, the Proposed Project is forecast to generate 4,346 daily trips, including 155 trips occurring during the a.m. peak hour and 185 trips occurring during the p.m. peak hour (see Appendix J).

Table 9
Project Trip Generation

| Land Use | Units |  | A.M. Peak Hour |  |  | P.M. Peak Hour |  |  | Daily Trips |

Significant
Impact

| Less Than | Less Than | No |
| :---: | :---: | :---: |
| Significant <br> with <br> Mitigation <br> Incorporated | Significant <br> Impact | Impact |

Regional access to the Project Site is provided by State Route 60 approximately 3.0 miles to the north and Interstate 215 approximately 5.0 miles to the west of the Project Site. Local northsouth circulation is provided by Nasson Street, Oliver Street, Via Del Lago, and Moreno Beach Drive; and east-west circulation is provided by Iris Avenue and John f Kennedy Drive.

Nasson Street: This four-lane divided roadway trends in a north-south direction and is classified as a Divided Arterial (four-lane divided roadway with 8 -foot shoulders) on the City of Moreno Valley circulation system in the study area. On-street parking appears to be restricted in the Project vicinity. Class II bike lanes are on both sides of the roadway in the Project vicinity. Sidewalks are provided on the east side of the roadway in the Project vicinity.

Oliver Street: This two-lane undivided to four-lane undivided to four-lane divided roadway trends in a north-south direction and is classified as a Minor Arterial (four-lane divided or undivided roadway with 5 to 8 -foot shoulders) a on the City of Moreno Valley General Plan Circulation Element in the project vicinity north of Iris Avenue and is unclassified south of Iris Avenue. On-street parking does not appear restricted in the study area, except at the Landmark Middle School bus loading zone. Currently, there are no designated bicycle facilities in the project vicinity; however, marked Class II bike lanes are proposed for this roadway on the master plan. Sidewalks are provided on both sides of the roadway in the Project vicinity.

Via Del Lago: This four-lane divided roadway trends in a north-south direction and is unclassified on the City of Moreno Valley General Plan Circulation Element in the study area. On-street parking is restricted in the Project vicinity. A Class II bike lane is on the west side of the roadway in the Project vicinity, and a marked shared bike-auto lane is on the east side of the roadway. Sidewalks are not provided on either side of the roadway.

Moreno Beach Drive: This six-lane divided roadway trends in an east-west direction and is classified as a Divided Major Arterial (six-lane divided roadway with 8-foot shoulders) on the City of Moreno Valley General Plan Circulation Element in the study area. On-street parking appears to be restricted in the Project vicinity. Class II bike lanes are on both sides of the roadway in the Project vicinity. Sidewalks are provided on both sides of the roadway.

Iris Avenue: This six-lane divided roadway trends in an east-west direction and is classified as a Divided Major Arterial (six-lane divided roadway with 8 -foot shoulders) on the City of Moreno Valley General Plan Circulation Element in the study area. On-street parking appears to be restricted in the Project vicinity. Class II bike lanes are on both sides of the roadway in the Project vicinity.

John F Kennedy Drive: This two-lane divided to four-lane undivided roadway trends in an east-west direction and is classified as a Minor Arterial (four-lane divided or undivided roadway with 5 to 8 -foot shoulders) a on the City of Moreno Valley General Plan Circulation Element in the study area. On-street parking appears to be restricted in the Project vicinity. Currently, Class II bike lanes are west of Moreno Beach Drive and Class III bike routes are east of Moreno Beach Drive. Sidewalks are provided on both sides of the roadway.

## Transit Facilities:

Route 20 runs along Iris Avenue and Moreno Beach Drive. The closest bus stop to the Project is at the northwest corner of Iris Avenue in front of the Project location.

## ISSUES \& SUPPORTING <br> INFORMATION SOURCES:

| Potentially |  |  |  |
| :---: | :---: | :---: | :---: |
| Significant <br> Impact | Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |

Bicycle Facilities Master Plan:
According to the General Plan Bicycle Master Plan, there are proposed bike facilities on Oliver Street and existing bike lanes on Iris Avenue, Nasson Street, Via Del Lago, Moreno Beach Drive, and John F Kennedy Drive.

## Designated Truck Routes:

There are no designated truck routes encompassing the Project Site.

## Pedestrian Facilities:

Currently, there are no sidewalks or other pedestrian accessible amenities surrounding the Project Site. However, the Proposed Project site plan includes an approximate six-foot-wide sidewalk on the south an eastern portion of the Project Site.

The TIA states the study intersections are forecast to operate within acceptable Levels of Service (C or better) during the peak hours for all analysis scenarios. Therefore, the Proposed Project is forecast to result in no substantial transportation effects relating to Level of Service operations for all analysis scenarios.

The Proposed Project would not impede the implementation of City programs supporting walking, bicycling, and use of buses. Therefore, the Proposed Project would not conflict with any adopted transportation policies, no impact associated with this issue would occur and no mitigation is required.
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

## Response: Less than Significant Impact

The Proposed Project is forecast to generate a total of approximately 4,346 new daily trips, including 155 new trips during the AM peak hour and 185 new trips during the PM peak hour. Project design features involve improvements necessary to provide Project Site access. To maintain sufficient storage capacity for the eastbound left-turn lane at the Oliver Street/lris Avenue intersection, it is recommended that the raised median on the eastbound Iris Avenue approaching Oliver Street be modified to provide a minimum of 285 feet of storage for the leftturn pocket.. Additionally, the Vehicle Miles Traveled Screening Analysis, completed April 11, 2023, concludes that the Proposed Project satisfies the City-established VMT screening criteria as adopted by the City of Moreno Valley and is anticipated to result in a less than significant VMT impact.

Therefore, the Proposed Project is presumed to have a less than significant impact on VMT and no additional VMT modeling or mitigation measures are required. As such, the Proposed Project shall not conflict or be inconsistent with the CEQA Guidelines Section 15064.3, subdivision (b).
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

## Response: Less than Significant Impact

The Project is on a 1.31-acre vacant lot located on one corner of a major intersection with no long roadway segments within the property. The design of roadways must provide adequate

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Potentially | Less Than <br> Significant <br> with |
| :---: | :---: |
| Significant <br> Impact | Mitigation <br> Incorporated |

| Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: |

sight distance and traffic control measures. This provision is normally realized through roadway design to facilitate roadway traffic flows. Roadway improvements in and around the Project Site would be designed and constructed to satisfy all City requirements for street widths, corner radii, intersection control as well as incorporate design standards tailored specifically to site access requirements. Adherence to applicable City requirements would ensure the proposed development would not include any sharp curves or dangerous intersections. Therefore, no substantial increase in hazards due to a design feature would occur, resulting in a less than significant impact. No mitigation is required.
d) Result in inadequate emergency access?

## Response: No Impact

The Moreno Valley Police Service (located at 22850 Calle San Juan De Los Lagos) is approximately 4.8 miles northwest of the Project Site, and the Moreno Valley Fire Department Station 74 (located at 16110 Lasselle Street) is approximately 1.4 miles southwest of the Project Site. Traffic associated with Project construction may have a temporary effect on existing traffic circulation patterns. The Proposed Project is in an urban setting and direct access to the site will be available via Iris Avenue and Oliver Street which would also accommodate emergency services and evacuation routes. Additionally, the I-60 and I-215, are both within five miles of the Project Site, should the area need to be evacuated. Due to the proximity of emergency services, the urban setting, and availability of access to the site, impacts to emergency access will be less than significant. The Proposed Project will also comply with all of the City's requirements for emergency access. Therefore, there no significant impacts would occur and no mitigation is required.

## XVIII. TRIBAL CULTURAL RESOURCES - Would the project:

a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or

## Response: Less than Significant with Mitigation Incorporated

California Assembly Bill 52 (AB52) was approved by Governor Brown on September25, 2014. AB52 specifies that CEQA projects with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource may have a significant effect on the environment. As such, the bill requires lead agency consultation with California Native American tribes traditionally and culturally affiliated with the geographic area of a proposed project, if the tribe requested to the lead agency, in writing, to be informed of proposed projects in that geographic area. The legislation further requires that the tribe-requested consultation be completed prior to determining whether a negative declaration, mitigated negative declaration, or environmental impact report is required for a project.

A Phase I Cultural Resources Assessment of Master Plot Plan No. PEN22-0238 and Conditional Use Permit No. PEN 22-0176, dated April 2023, was conducted by a Cultural Resources Consultant, Jean A. Keller. The investigation confirmed that the Project Site does not contain any features or resources listed or eligible for listing in the California Register of Historical Resources or in a local register of historical resources. The Project Site is located in a well-studied area with 11 previous cultural resource studies have been conducted within a one-mile radius, and 22 cultural resource properties been recorded, one of which is located on the Project Site (see Section V). The remaining 21 resource properties encompassing the Project Site are Native American milling locations, including one site having a small rock shelter and midden. Five sites only have a single milling slick, indicating the use by an individual in processing plant food (seed) resources. The remainder have multiple milling features, generally indicating that a small group worked together processing resources or that these were site visited over several seasons and used by a multiple of individuals.

A Sacred Land File report was conducted February 14, 2023, by the Native American Heritage Commission (NAHC). Based on the provided USGS quadrangle information, the search had negative results.

During $A B 52$ consultation with the City of Moreno Valley, seven tribes were contacted concerning the development of the Proposed Project. The Aqua Caliente Band of Mission Indians and the San Manuel Band of Mission Indians contacted the City regarding the Proposed Project. The Agua Caliente Band of Cahuilla Indians determined that their concerns had been addressed. The San Manuel Band of Mission Indians (SMBMI) determined that the Project Site is outside of Serrano ancestral territory

Therefore, the implementation of Mitigation Measures CUL-1, would reduce impacts to Tribal Cultural Resources defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, to less than significant.

## ISSUES \& SUPPORTING <br> INFORMATION SOURCES:

2. Final Environmental Impact Report City of Moreno Valley General Plan, certified May 20, 2021
3. Title 9 - Planning and Zoning of the Moreno Valley Municipal Code
4. Moreno Valley Municipal Code Title 7 - Cultural Preservation
5. Cultural Resources Inventory for the City of Moreno Valley, Riverside County, California, prepared by Daniel F. McCarthy, Archaeological Research Unit, University of California, Riverside, October 1987 (This document cannot be provided to the public due to the inclusion of confidential information pursuant to Government Code Section 6254.10.)

## XIX. UTILITIES AND SERVICE SYSTEMS - Would the project:

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

## Response: Less than Significant Impact

## Water Infrastructure

Less Than Significant Impact: Water demand for the Proposed Project would be met by the existing Eastern Municipal Water District (EMWD) water distribution system. The project would connect to an existing water line located on Iris Avenue. The EMWD has provided a will serve letter dated November 14,2022 stating it has the capability to provide water service for the

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Potentially |
| :---: | :---: |
| Significant |
| Impact | | Less Than |
| :---: |
| Significant |
| with |
| Mitigation |
| Incorporated |

| Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: |

Proposed Project. ${ }^{4}$ Therefore, development of the Project would not result in the relocation or construction of new or expanded water facilities that would impact the environment, resulting in a less than significant impact; no mitigation is required.

## Wastewater

Less Than Significant Impact: Wastewater collection and treatment would be provided by EMWD. The District is responsible for the collection, transmission, treatment, reclamation, and disposal of wastewater within its service area, which includes the City of Moreno Valley. Wastewater from the Proposed Project would discharge to the existing sewer lines in Iris Avenue. EMWD operates and maintains four Publicly Owned Treatment Works (POTWs) located in San Jacinto, Moreno Valley, Temecula, and Perris. The Moreno Valley Regional Water Reclamation Facility provides service for the area of the Project Site. The plant treats approximately 11.5 Million Gallons Per Day (MGD), has a current capacity of 16 MGD, with an ultimate capacity of 18 MGD. Sufficient capacity exists to meet demands of the Proposed Project; a Will Serve letter from EMWD is on-file with the City. ${ }^{5}$ Impacts would be less than significant impact, and no mitigation is required.

## Storm Drainage

Less Than Significant Impact: Within the Project Site, the highest point is along the southerly property line closest to the southeast corner and the existing low point is along the northern property line, close to the northeast corner. The commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the off-site storm drain system. Development of the Proposed Project would result in new impervious surfaces on-site. The Proposed Project will include an underground infiltration basin with a retention volume of 15,237 CF, located in the northwest side of the Project Site. Additionally, proposed storm drain laterals will collect water from the landscape swale. Proposed storm drain lines will run along the drive aisles and drain northwest toward the proposed underground infiltration chambers. As such, direct infiltration of storm water from impervious surfaces would be captured and would allow for groundwater recharge.

Therefore impacts would be less than significant related to storm water runoff or storm drain systems and no mitigation is required.

## Electric Power

Less Than Significant Impact: In 2001, the Moreno Valley City Council established the Moreno Valley Utility (MVU). The utility served its first customers on February 6, 2004 in the Promontory Park subdivision at Cactus Avenue and Moreno Beach Drive. MVU serves over 6,500 customers within its service area. The Project would connect to the existing Moreno Valley Utility (MVU) electrical distribution facilities that are adjacent to the Project Site and would not require the construction of new electrical facilities resulting in a less than significant impact, and no mitigation is required.

[^24]Less Than
Significant
with
Mitigation

## Natural Gas

Less Than Significant Impact: Southern California Gas Company (SoCalGas) provides natural gas service to the vicinity and the Project Site. Therefore, the Proposed Project will receive natural gas from SoCalGas by connecting to the existing line along Iris Avenue, south of the Project Site. The existing SoCalGas facilities are expected to sufficiently serve the increased demand of natural gas. In 2021, the Commercial sector of the Southern California Gas Company planning area consumed 98.293612 million therms of natural gas. Based on the CalEEMod emission output tables for the Proposed Project, the estimated natural gas demand is $1,552.59$ therms of natural gas per year. The Proposed Project's estimated annual natural gas consumption compared to the 2020 annual natural gas consumption of the overall Industry Sector in the Southern California Gas Company Planning Area would account for approximately 0.0015795 percent of total natural gas consumption. Therefore, the natural gas demand from the Proposed Project would represent an insignificant percentage to the overall demand in SoCalGas' service area, and no mitigation is required.

## Telecommunications

Less Than Significant Impact: Development of the Project would require a connection to telecommunication services for internet service and phone service. Connection to existing services is available adjacent to the Project Site at Iris Avenue. The Proposed Project's demand for services is anticipated to be minimal based on the uses proposed. Therefore, development of the Project would not require the relocation or construction of new communications facilities resulting in a less than significant impact, and no mitigation is required.

The Proposed Project would be an acceptable use within the Commercial land use category. Therefore, the Proposed Project is not anticipated to require or result in the relocation or construction of new expanded water, wastewater treatment, storm water drainage, electrical power, natural gas, or telecommunications facilities; the construction or relocation of which could cause significant environmental effects. No significant adverse impacts are identified or anticipated, and no mitigation measures are required.
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

## Response: Less than Significant Impact

According to the Eastern Municipal Water District's Urban Water Management Plan (UWMP) prepared by Water Systems Consulting, Inc. in 2021, EMWD has a diverse portfolio of local and imported water supplies. Local supplies include recycled water, potable groundwater, and desalinated water. Additionally, the EMWD receives imported water from the Metropolitan Water District of Southern California. During a multiple dry-year period, the EMWD's total water supply is projected to be 184,700 acre-feet (AF) by 2040, while the total water demand is projected to be 184,700 AF in the same year, resulting in neither surplus nor deficit. The Proposed Project is an acceptable use within the Planned Commercial land use area. As identified in the UWMP, the EMWD has the ability to meet current and projected water demands through 2040 during normal, historic single-dry and historic multiple-dry year periods using imported water from Metropolitan Water District (MWD) with existing supply resources. Additionally, the anticipated available water supply within EMWD's service area would be

## ISSUES \& SUPPORTING INFORMATION SOURCES:

| Less Than |

| Significant |
| with |
| Mitigation |
| Incorporated |

| Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: |

greater than the demand for water in the future, which indicates that EMWD has available capacity to serve the Project without requiring the construction of new water facilities beyond those that would be developed within the Project site to serve the future residences.

Therefore, because the Proposed Project has sufficient water sources, and will not significantly impact the City of Moreno Valley's water supply, impacts are considered less than significant, and no mitigation measures are required.
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

## Response: Less than Significant Impact

Wastewater flows from the Project Site would be collected and treated by EMWD and would be conveyed to the Moreno Valley Regional Water Reclamation Facility (MVRWRF) located in the southwestern portion of the City. EMWD has provided a Will Serve letter dated November 14, 2022 indicating it is willing to provide water and sewer service to the Proposed Project. The Proposed Project would not require the construction of a new water or wastewater treatment facilities or expansion of existing facilities, which could cause significant environmental effects; and impacts related to this issue would be considered less than significant. No mitigation is required.
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

## ISSUES \& SUPPORTING INFORMATION SOURCES:

regional, and state programs that mandate recycling, organic waste diversion, and other practices result in reduced waste generation. With the passage of AB 341, each jurisdiction in California is required to meet the mandatory state diversion goal of $75 \%$ by and after the year 2020.

In addition, the City's Building Code requires the Project Applicant to complete and submit a Waste Management and Recycling Plan for approval prior to issuance of building permits. This Waste Management and Recycling Plan would identify the Project type and would estimate the amount of materials to be recycled during construction. Set forth in Section 5.408.1 of the California Green Code, it is required that demolition and construction activities recycle or reuse a minimum of 65 percent of the nonhazardous construction and demolition waste.

Additionally, the Proposed Project would be required to complete a Diversion Report for review by the City's Building Department to demonstrate that the required recycling minimum percent of its construction waste. All development within the City is required to comply with applicable elements of AB 1383, Chapter 18 (California Solid Waste Reuse and Recycling Access Act of 1991), Title 8.80 Recycling and Diversion of Construction and Demolition Waste of the City Municipal Code, AB 341 establishing a 75\% diversion goal statewide, and other local, state, and federal solid waste disposal standards, thereby ensuring that the solid waste stream to the waste disposal facilities is reduced in accordance with existing regulations. Therefore, the Proposed Project would be required to comply with all regulations related to solid waste under federal, state, and local statutes resulting in no impact.

XX. WILDFIRE - If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

## Response: No Impact

The Project Site is not located within a Fire Hazard Severity Zone, as identified by the Moreno Valley General Plan, Map S-5: Fire Hazard Severity Zones. The nearest fire hazard zone to the Project Site is located approximately 0.3 miles southeast of the site in the Bernasconi Hills. The Moreno Valley Local Hazard Mitigation Plan (LHMP) (Figure 12-2) identifies that Iris Avenue and Oliver Street are both Primary Evacuation Routes. Additionally, The General Plan states that I-215 and SR-60 are both major roadways that would constitute evacuation routes in the event of an emergency. The Project Site is located within a Local Response Area (LRA) and surrounded by developed property (residential) to the southeast with vacant property routinely disked for weed abatement to the northwest. ${ }^{6}$ Due to the site being surrounded by developed property and vacant property devoid of native vegetation (i.e., fuel), there is a significantly minimized threat of wildfires occurring in the surrounding area. In addition, Riverside County Fire Department 91 is located at 16110 Lasselle Street, approximately 1.35 miles from the Project Site provides urban fire response. Therefore, development of the Proposed Project would not substantially impair an adopted emergency response plan or emergency evacuation plan in the case of a wildfire, and the Project would not have a significant effect on any emergency response or evacuation procedures; no mitigation measure are required.
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

## Response: No Impact

The Project Site is not located within a Fire Hazard Severity Zone. The Project Site is primarily flat, and construction of the Proposed Project would include pre-construction grading. Additionally, the site is located within a predominately developed region with no wildlands located on or adjacent to the Project Site. Typically, wildland fire hazards are of concern where development is adjacent to wildland areas, otherwise known as Wildland Urban Interface. The Project Site is not within any Wildland Urban Interface areas, as identified in the California Department of Forestry and Fire Protection's Fire and Resource Assessment Program (FRAP). Therefore, the Project would not exacerbate wildfire risks, thereby exposing Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire, and no impacts would occur.

## ISSUES \& SUPPORTING <br> INFORMATION SOURCES:

| Potentially <br> Significant <br> Impact | Less Than <br> Significant <br> with <br> Mitigation <br> Incorporated | Less Than <br> Significant <br> Impact | No <br> Impact |
| :---: | :---: | :---: | :---: |
| $\square$ | $\square$ | $\square$ |  |

## Response: No Impact

The Project Site is currently vacant and consists of a mix-ruderal plant community. Implementation of the Proposed Project would eliminate the existing vegetation on-site and provide a paved foundation, thereby reducing the risk of wildfire. Per the General Plan, the Proposed Project is required to be consistent with the California Building Code Chapter 7A, the International Wildland-Urban Interface Code, and the Moreno Valley Municipal Code Chapter 8.36: California Fire Code. None of the Proposed Project improvements would require the installation of any new infrastructure thereby exacerbating fire risk No impact would occur.
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

## Response: No Impact

The Project Site is not located on or near hilly terrain and is not located in a FEMA 100- or 500year floodplain. The Project Site is located in Class V (Moderate Risk) of the Landslide Susceptibility Classes, as shown in the General Plan, Map S-3: Landslide Hazards. The majority of the Project Site's surrounding land uses are primarily flat and graded towards the southeast. Additionally, the Moreno Valley LHMP Slope Analysis does not identify the Project Site or its surrounding land uses in having any significant sloping elevation. Therefore, the Proposed Project would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire stability, or drainage change and no impact would occur.

## XXI. MANDATORY FINDINGS OF SIGNIFICANCE

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?
Response: Less than Significant with Mitigation Incorporated
Based on a Biological Resources Assessment (BRA), Jurisdictional Delineation, and MSHCP Consistency Analysis prepared by Jennings Environmental, LLC in February 2023, portions of the Project Site and the immediate surrounding area do provide suitable habitat for nesting birds. There are mature trees in the adjacent neighborhoods and the vacant lands provide suitable habitat for other ground nesting species (i.e. killdeer (Charadrius vociferus)). Therefore, possible significant adverse impacts have been identified or are anticipated and Mitigation Measure BIO-1 is required as a condition of project approval to reduce these impacts to a level below significant. The Proposed Project would not have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or a wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, and reduce the number or restrict the range of a rare or endangered plant or animal with implementation of Mitigation Measure BIO-1. No additional mitigation is warranted.

A Phase I Cultural Resources Assessment of Master Plot Plan No. PEN22-0238 and Conditional Use Permit No. PEN 22-0176, dated April 2023, was conducted by a Cultural Resources Consultant, Jean A. Keller. A records search was also conducted by staff at the Eastern Information Center on March 29, 2023, indicated that the subject property had been involved in one previous cultural resources study, conducted in 2017 by LSA. Entitled "Cultural Resources Assessment, Sater Arco Project, City of Moreno Valley, Riverside County, California" (RI- 10128), the study included the entirety of what is now PEN22-0238 and PEN220176. During the course of the field survey, a single isolated artifact of historical origin, P-33027260, was recorded approximately 130 feet northwest of the intersection of Iris Avenue and Oliver Road. The artifact was a fragment of a pre-WWII riveted steel irrigation pipe. The report determined that isolated artifacts, particularly those of historic-period origin that have no specific association are generally considered not significant and therefore, are not "historical resources" under the California Environmental Quality Act (CEQA). The artifact was left in situ, or its original place and no further research was recommended.

The Project Site is located in a well-studied area, with 11 previous cultural resources studies having been conducted within a one-mile radius, most of which have large acreage. During the course of these studies, 22 cultural resources properties have been recorded, one of which was located on the Project Site. With the exception of the isolated historical-era artifact found on the Project Site, all of the remaining sites are Native American bedrock milling sites, although one site also has a small rock shelter and midden. No significant archaeological sites have been recorded in less than a one-half mile radius of the subject property. However, due to the existence of a historical artifact on the Project Site, the presence of another irrigation feature off property, and the number of Native American milling sites within a one mile radius, LSA recommended part-time archaeological monitoring of grading, which would be addressed with

Mitigation Measure CUL-1. Therefore, with the adherence to Mitigation Measure CUL-1, the Proposed Project will have a less than significant impact on historic or archaeological resources within the Project Site and surrounding land uses.
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)?

## Response: Less than Significant Impact

Cumulative impacts are defined as two or more individual affects that, when considered together, are considerable or that compound or increase other environmental impacts. The cumulative impact from several Projects is the change in the environment that results from the incremental impact of the development when added to the impacts of other closely related past, present, and reasonably foreseeable or probable future developments. Cumulative impacts can result from individually minor, but collectively significant, developments taking place over a period. The CEQA Guidelines, Section 15130 (a) and (b), states:
(a) Cumulative impacts shall be discussed when the Project's incremental effect is cumulatively considerable.
(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided of the effects attributable to the Project. The discussion should be guided by the standards of practicality and reasonableness.

No potential impacts associated with the Proposed Project would be considered individually adverse or unfavorable. The Proposed Project is a compatible use identified in and previously evaluated as part of the City of Moreno Valley's General Plan and Municipal Code. No additional potential cumulative adverse impacts are identified or are anticipated, and no additional mitigation measures are required.
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

## Response: Less than Significant Impact

Incorporation of mitigation measures, City of Moreno Valley's policies, standards, and guidelines would ensure that the Proposed Project would have no substantial adverse effects on human beings, either directly or indirectly on an individual or cumulative basis. Therefore, a less than significant impact is anticipated.

## Exhibit B

MITIGATION MONITORING AND REPORTING PROGRAM

## Mitigation Monitoring and Reporting Program

## Introduction

The California Environmental Quality Act (CEQA) requires a lead or public agency that approves or carries out a project for which an Mitigated Negative Declaration has been certified which identifies one or more significant adverse environmental effects and where findings with respect to changes or alterations in the project have been made, to adopt a "...reporting or monitoring program for the changes to the project which it has adopted or made a condition of project approval in order to mitigate or avoid significant effects on the environment" (CEQA, Public Resources Code Sections 21081, 21081.6).

A Mitigation Monitoring and Reporting Program (MMRP) is required to ensure that adopted mitigation measures are successfully implemented. The City of Moreno Valley is the Lead Agency for the project and is responsible for implementation of the MMRP. Table 1 of this report describes the MMRP for the Project and identifies the parties that will be responsible for monitoring implementation of the individual mitigation measures in the MMRP. This report also describes existing Plans, Programs, or Policies (PPPs) that apply to the project in Table 2.

## Mitigation Monitoring and Reporting Program

The MMRP for the Project will be active through all phases of the Project, including design, construction, and operation. The attached table identifies the mitigation program required to be implemented by the City for the Project. The table identifies mitigation measures required by the City to mitigate or avoid significant impacts associated with the implementation of the Project, the timing of implementation, and the responsible party or parties for monitoring compliance.

The MMRP also includes a column that will be used by the compliance monitor (individual responsible for monitoring compliance) to document when implementation of the measure is completed. As individual Plan, Program, Policies; and mitigation measures are completed, the compliance monitor will sign and date the MMRP, indicating that the required actions have been completed.

This page intentionally left blank.

| MITIGATION MEASURE | ACTION AND TIMING | Responsible for ENSURING COMPLIANCE / VERIFICATION | DATE COMPLETED AND INITIALS |
| :---: | :---: | :---: | :---: |
| Air Quality |  |  |  |
| MM AQ-1: Compliance with SCAQMD Rules 402 and 403. The <br> Project Proponent would be required to comply with Rules 402 nuisance, and 403 fugitive dust, which require the implementation of Best Available Control Measures (BACMs) for each fugitive dust source, and the AQMP, which identifies Best Available Control Technologies (BACTs) for area sources and point sources. The BACMs and BACTs would include, but not be limited to the following: <br> 1. The Project Proponent shall ensure that any portion of the site to be graded shall be pre-watered prior to the onset of grading activities (see Figures 4 and 6). <br> a) The Project Proponent shall ensure that watering of the site or other soil stabilization method shall be employed on an on-going basis after the initiation of any grading activity on the site. Portions of the site that are actively being graded shall be watered regularly ( $3 x$ daily) to ensure that a crust is formed on the ground surface and shall be watered at the end of each workday. <br> b) The Project Proponent shall ensure that all disturbed areas are treated to prevent erosion until the site is constructed upon. <br> c) The Project Proponent shall ensure that landscaped areas are installed as soon as possible to reduce the potential for wind erosion. <br> d) The Project Proponent shall ensure that all grading activities are suspended during first and second stage ozone episodes or when winds exceed 25 miles per hour. <br> During construction, exhaust emissions from construction vehicles and equipment and fugitive dust generated by | In Construction Plans and Specifications Prior to Demolition, Grading and Building Permits | City of Moreno Valley Building and Safety Division |  |

| MITIGATION MEASURE | ACTION AND TIMING | Responsible for ENSURING COMPLIANCE / VERIFICATION | DATE COMPLETED AND INITIALS |
| :---: | :---: | :---: | :---: |
| equipment traveling over exposed surfaces would increase $\mathrm{NO}_{x}$ and $\mathrm{PM}_{10}$ levels in the area. Although the Proposed Project does not exceed SCAQMD thresholds during construction, the Applicant/Contractor would be required to implement the following conditions as required by SCAQMD: <br> 1. To reduce emissions, all equipment used in grading and construction must be tuned and maintained to the manufacturer's specification to maximize efficient burning of vehicle fuel. <br> 2. The Project Proponent shall ensure that existing power sources are utilized where feasible via temporary power poles to avoid on-site power generation during construction. <br> 3. The Project Proponent shall ensure that construction personnel are informed of ride sharing and transit opportunities. <br> 4. All buildings on the Project Site shall conform to energy use guidelines in Title 24 of the California Administrative Code. <br> 5. The operator shall maintain and effectively utilize and schedule on-site equipment in order to minimize exhaust emissions from truck idling. <br> 6. The operator shall comply with all existing and future California Air Resources Board (CARB) and SCAQMD regulations related to diesel-fueled trucks, which may include among others: (1) meeting more stringent emission standards; (2) retrofitting existing engines with particulate traps; (3) use of low sulfur fuel; and (4) use of alternative fuels or equipment. |  |  |  |

| MITIGATION MEASURE | ACTION AND TIMING | Responsible for ENSURING COMPLIANCE / VERIFICATION | DATE COMPLETED AND INITIALS |
| :---: | :---: | :---: | :---: |
| Biological Resources |  |  |  |
| MM BIO-1: Migratory Bird Treaty Act. Nesting bird nesting season generally extends from February 1 through September 15 in southern California and specifically, March 15 through August 31 for migratory passerine birds. To avoid impacts to nesting birds (common and special status) during the nesting season, a qualified Avian Biologist will conduct pre-construction Nesting Bird Surveys (NBS) prior to Project-related disturbance to nestable vegetation to identify any active nests. If no active nests are found, no further action will be required. If an active nest is found, the biologist will set appropriate no-work buffers around the nest which will be based upon the nesting species, its sensitivity to disturbance, nesting stage, and expected types, intensity, and duration of the disturbance. The nests and buffer zones shall be field-checked weekly by a qualified biological monitor. The approved no-work buffer zone shall be clearly marked in the field, within which no disturbance activity shall commence until the qualified biologist has determined the young birds have successfully fledged and the nest is inactive. | Surveys to be conducted if construction occurs during the nesting period of February 1 through September 15. | City of Moreno Valley Community Development Department |  |
| Cultural Resources |  |  |  |
| MM CR-1: Archaeological Monitoring. Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The Project Archaeologist shall have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project Archaeologist, in consultation with the Consulting Tribe(s), the contractor, and the City, shall develop a Cultural Resources Management Plan (CRMP) in consultation pursuant to the definition in AB52 to address the details, timing and responsibility of all archaeological and cultural activities that will occur on the project site. A consulting tribe is defined as a tribe that initiated | Confirmation of professional archaeologist retention/ongoing/monitoring/submittal of Report of Findings. Prior to issuance of Grading Permit and during subsurface excavation. | City of Moreno Valley Community Development Department |  |

| MITIGATION MEASURE | ACTION AND TIMING | Responsible for ENSURING COMPLIANCE / VERIFICATION | DATE COMPLETED AND INITIALS |
| :---: | :---: | :---: | :---: |
| the $A B 52$ tribal consultation process for the Project, has not opted out of the AB52 consultation process, and has completed AB 52 consultation with the City as provided for in Cal Pub Res Code Section 21080.3.2(b)(1) of AB52. Details in the Plan shall include: <br> a. Project grading and development scheduling; <br> b. The Project archeologist and the Consulting Tribes(s) as defined in CR-1 shall attend the pre-grading meeting with the City, the construction manager and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The Training will include a brief review of the cultural sensitivity of the Project and the surrounding area; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that will conduct earthwork or grading activities that begin work on the Project following the initial Training must take the Cultural Sensitivity Training prior to beginning work and the Project archaeologist and Consulting Tribe(s) shall make themselves available to provide the training on an as needed basis; <br> c. The protocols and stipulations that the contractor, City, Consulting Tribe(s), and Project archaeologist will follow in the event of inadvertent cultural resources discoveries, include any newly discovered cultural resource deposits that shall be subject to a cultural resource evaluation. |  |  |  |

| MITIGATION MEASURE | ACTION AND TIMING | Responsible for ENSURING COMPLIANCE / VERIFICATION | DATE COMPLETED AND INITIALS |
| :---: | :---: | :---: | :---: |
| Geology and Soils |  |  |  |
| MM GEO-1: Paleontological Resources. A paleontologist selected from the roll of qualified paleontologists maintained by the City shall be retained to provide spot-check monitoring services for the project. The paleontologist shall develop a Paleontological Resources Impact Mitigation Plan (PRIMP) to mitigate the potential impacts to unknown buried paleontological resources that may exist onsite. The PRIMP shall require that the paleontologist be present at the pre-grading conference to establish procedures for paleontological resource surveillance. The PRIMP shall require paleontological spot-check monitoring of excavation that exceeds depths of 5 feet. The PRIMP shall state that the project paleontologist shall reevaluate the necessity for paleontological monitoring after 50 percent or greater of the excavations deeper than 5 feet have been completed. <br> In the event that paleontological resources are encountered, ground-disturbing activity within 50 feet of the area of the discovery shall cease. The paleontologist shall examine the materials encountered, assess the nature and extent of the find, and recommend a course of action to further investigate and protect or recover and salvage those resources that have been encountered. <br> Criteria for discard of specific fossil specimens will be made explicit. If a qualified paleontologist determines that impacts to a sample containing significant paleontological resources cannot be avoided by project planning, then recovery may be applied. Actions may include recovering a sample of the fossiliferous material prior to construction, monitoring work and halting construction if an important fossil needs to be recovered, and/or cleaning, identifying, and cataloging specimens for curation and research purposes. Recovery, salvage and treatment shall be | Confirmation of professional paleontologist retention/ongoing/monitoring/submittal of Paleontological Resources Impact Mitigation Plan (PRIMP). The project shall comply with the City's Municipal Chapter 8.10 and the Municipal Separate Storm Sewer System (MS4) permit requirements in effect for the Regional Water Quality Control Board (RWQCB) at the time of grading permit to control discharges of sediments and other pollutants during operations of the project. | Review and approval of WQMP. Prior to Grading Permit. | City of Moreno Valley Community Development Department |  |

## Exhibit C

NOTICE OF INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION

## CITY OF MORENO VALLEY NOTICE OF INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION

NOTICE IS HEREBY GIVEN that the City of Moreno Valley is considering a recommendation that the project herein identified will have no significant environmental impact in compliance with Section 15070 of the CEQA guidelines. A copy of the MITIGATED NEGATIVE DECLARATION and the ENVIRONMENTAL CHECKLIST, which supports the proposed findings, are on file at the City of Moreno Valley.

## Project:

Applicant:
Owner:
Representative:
Location:
Proposal:

## Council District:

This Notice of Intent has been prepared to notify agencies and interested parties that the City of Moreno Valley, as the Lead Agency, has prepared an Initial Study/Mitigated Negative Declaration pursuant to the requirements of the California Environmental Quality Act (CEQA) to evaluate the potential environmental impacts associated with construction and operation of the project as described below.

Project Description: The Proposed Project consists of a proposal for a Master Plot Plan (PEN22-0238) and Conditional Use Permit (PEN22-0176) that provides for the development and operation of an eight (8) island fueling station, six (6) vehicle charging stations, a 7,400 square foot convenience store, and a 1,790 square foot drive-thru carwash on a site containing 1.31 acres within the Downtown Center (DC) zone. The Proposed Project design also includes auto parking areas, landscaping, lighting, and off-site improvements.

The Project Site is not included on any list of hazardous materials sites compiled pursuant to Government Code Section 65962.5.

Document Availability: The Initial Study/Mitigated Negative Declaration and all documents incorporated and/or referenced therein can be reviewed during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday and Friday, 7:30 a.m. to $4: 30$ p.m.) at the City of Moreno Valley Planning Division counter, located at 14177 Frederick Street, Moreno Valley, CA 92553. The documents may also be reviewed on the City's website at http://www.moreno-valley.ca.us/cdd/documents/about-projects.html

Potential Environmental Impacts: The City of Moreno Valley has prepared an Initial Study to determine the environmental effects associated with the above actions and finds the issuance of a Mitigated Negative Declaration is the appropriate level of environmental review. The Initial Study/Mitigated Negative Declaration concludes that all potentially significant impacts of the Project would be mitigated to a less than significant level.

Comment Deadline: Pursuant to Section 15105(b) of the CEQA Guidelines, the City has established a 20 -day public review period for the Initial Study/Mitigated Negative Declaration, which begins on October 13, 2023, and ends November 2, 2023. Written comments on the Initial Study/Mitigated Negative Declaration must be received at the City of Moreno Valley Community Development Department by no later than the conclusion of the 20-day review period, 5:30 p.m. on November 1, 2023. Written comments on the Initial Study/Mitigated Negative Declaration should be addressed to:

## RESOLUTION NUMBER 2023-XX

## A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, APPROVING A MASTER PLOT PLAN (PEN220238) AND CONDITIONAL USE PERMIT (PEN22-0176) FOR THE BEYOND FOOD MART LOCATED ON THE NORTHWEST CORNER OF IRIS AVENUE AND OLIVER STREET (APN: 486-310-038)

WHEREAS, the City of Moreno Valley ("City") is a general law city and a municipal corporation of the State of California, and

WHEREAS, Beyond Food Mart, Inc. ("Applicant") has submitted applications for a Master Plot Plan (PEN22-0238) for a 1.31-acre commercial development ( 57,063 square feet); and a Conditional Use Permit (PEN22-0176) for the operation of an eight (8) island fueling station, six (6) vehicle charging stations, market (7,400 square feet), and drivethru carwash (1,790 square feet) ("Proposed Project"), located at the northwest corner of Iris Avenue and Oliver Street (APN: 486-310-038), within the Downtown Center (DC) District ("Project Site"); and

WHEREAS, the applications for the Proposed Project have been evaluated in accordance with Section 9.02.070 (Plot Plans) and 9.02.060 (Conditional Use Permits), respectively, of the Municipal Code with consideration given to the City's General Plan, Zoning Ordinance, and other applicable laws and regulations; and

WHEREAS, Section 9.02 .070 (Plot Plans) of the Municipal Code imposes conditions of approval upon projects for which a Plot Plan is required, which conditions may be imposed by the Planning Commission or City Council, when jurisdiction is assumed, to address on-site improvements, off-site improvements, the manner in which the site is used and any other conditions as may be deemed necessary to protect the public health, safety and welfare and ensure that the Proposed Project will be developed in accordance with the purpose and intent of Title 9 ("Planning and Zoning") of the Municipal Code; and

WHEREAS, Section 9.02.020 (Permitted Uses) provides that Auto Service Stations with accessory uses including vehicle charging stations, markets, and drive-thru carwashes are allowed within the Downtown Center (DC) District, with a properly secured Conditional Use Permit approved by the Planning Commission or City Council, when jurisdiction is assumed, when the use is located 300 feet or less from a residential zone or use; and

WHEREAS, the parcels to the east of the Project Site across Oliver Street are within 300 feet and developed with single-family residences within the Residential Medium Low (ML) District of the Moreno Valley Ranch Specific Plan (SP193), and the parcels to the south of the Project Site across Iris Avenue are also within 300 feet and developed with single-family residences within the Residential Medium Low (ML) District of the Moreno Valley Ranch Specific Plan (SP193); and

WHEREAS, Section 9.02.060 (Conditional Use Permits) of the Moreno Valley Municipal Code acknowledges that the purpose of Conditional Use Permits is to allow the establishment of uses that may have special impacts or uniqueness such that their effect on the surrounding environment cannot be determined in advance of the use being proposed for a particular location and that the Conditional Use Permit application process involves the review of location, design, and configuration of improvements related to the project, and the potential impact of the project on the surrounding area based on fixed and established standards; and

WHEREAS, Section 9.02.060 (Conditional Use Permits) of the Municipal Code imposes conditions of approval upon projects for which a Conditional Use Permit is required, which conditions may be imposed by the Planning Commission or City Council, when jurisdiction is assumed, to address on-site improvements, off-site improvements, the manner in which the site is used, and any other conditions as may be deemed necessary to protect the public health, safety and welfare to ensure that the proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

WHEREAS, consistent with the requirements of Section 9.02.060 (Conditional Use Permits) of the Municipal Code, at the public hearing the Planning Commission or City Council, when jurisdiction is assumed, considered Conditions of Approval to be imposed upon Conditional Use Permit (PEN22-0176), which conditions were prepared by Planning Division staff who deemed said conditions to be necessary to protect the public health, safety, and welfare and to ensure the Proposed Project will be developed in accordance with the purpose and intent of Title 9 ("Planning and Zoning") of the Municipal Code; and

WHEREAS, consistent with the requirements of Section 9.02.070 (Plot Plans) of the Municipal Code, at the public hearing, the City Council considered Conditions of Approval to be imposed upon Master Plot Plan (PEN22-0238), which conditions were prepared by Planning Division staff who deemed said conditions to be necessary to protect the public health, safety, and welfare and to ensure the Proposed Project will be developed in accordance with the purpose and intent of Title 9 (Planning and Zoning) of the Municipal Code; and

WHEREAS, on November 9, 2023, a hearing was conducted by the Planning Commission whereby the Planning Commission voted unanimously 7-0 to adopt Planning Commission Resolution No. 2023-47 adopting the MND and the MMRP for the Proposed Project, and adopt Planning Commission Resolution 2023-48 approving the Proposed Project; and

WHEREAS, pursuant to the provisions of Section 9.02.200 (Public Hearing and Notification Procedures) of the Municipal Code, a public hearing was scheduled for December 19, 2023, and notice thereof was duly published, posted, and mailed to all property owners of record within 600 feet of the Project Site; and

WHEREAS, on December 19, 2023, the public hearing to consider the Proposed Project was duly conducted by the City Council, at which time all interested persons were provided with an opportunity to testify and present evidence; and

WHEREAS, at the public hearing, the City Council considered whether each of the requisite findings specified in Section 9.02 .070 (Plot Plans) of the Municipal Code and set forth herein could be made concerning the Proposed Project as conditioned by Conditions of Approval; and

WHEREAS, at the public hearing, the City Council considered whether each of the requisite findings specified in Section 9.02 .060 (Conditional Use Permits) of the Municipal Code and set forth herein could be made concerning the Proposed Project as conditioned by Conditions of Approval; and

WHEREAS, on December 19, 2023, in accordance with the provisions of the California Environmental Quality Act (CEQA ${ }^{1}$ ) and CEQA Guidelines ${ }^{2}$, the City Council adopted Resolution No. 2023-XX, adopting a Mitigated Negative Declaration and approving the Mitigation Monitoring and Reporting Program for the Proposed Project.

## NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MORENO VALLEY, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

## Section 1. Recitals and Exhibits

That the foregoing Recitals and attached exhibits are true and correct and are hereby incorporated by this reference.

## Section 2. Notice

That pursuant to Government Code Section 66020(d)(1), notice is hereby given that the Proposed Project is subject to certain fees, dedications, reservations, and other exactions as provided herein, in the staff report and conditions of approval (collectively, "Conditions"); and these Conditions constitute written notice of a statement of the amount of such fees, and a description of the dedications, reservations, and other exactions. You are hereby further notified that the ninety-day approval period in which you may protest these fees, dedications, reservations, and other exactions, pursuant to Government Code Section 66020(a), has begun.

## Section 3. Evidence

That the City Council has considered all evidence submitted into the Administrative Record for the Proposed Project, including, but not limited to, the following:
(a) Moreno Valley General Plan and all other relevant provisions contained therein;

[^26](b) Title 9 (Planning and Zoning) of the Moreno Valley Municipal Code and all other relevant provisions referenced therein;
(c) Application for Master Plot Plan (PEN22-0238), including Resolution No. 2023-XX and all documents, records, and references contained therein;
(d) Conditions of Approval for Master Plot Plan (PEN22-0238), attached hereto as Exhibit A;
(e) Application for the approval of Conditional Use Permit (PEN22-0176), including Resolution No. 2023-XX and all documents, records, and references contained therein;
(f) Conditions of Approval for Conditional Use Permit (PEN22-0176), attached hereto as Exhibit B;
(g) Staff Report and Resolutions prepared for the Planning Commission's consideration and all documents, records, and references related thereto, and Staff's presentation at the public hearing; and
(h) Testimony, comments, and correspondence from all persons that were provided at, or prior to, the November 9, 2023, Planning Commission public hearing; and
(i) Planning Division Staff Report prepared for the City Council's consideration and all documents, records, and references related thereto, and Planning Division Staff's presentation at the public hearing; and
(j) Testimony, and/or comments from Applicant and its representatives during the public hearing; and
(k) Testimony and/or comments from all persons provided in written format or correspondence, at, or prior to, the public hearing.

## Section 4. Findings

That based on the foregoing Recitals and the Evidence contained in the Administrative Record as set forth above, the City Council makes the following findings in approving the Proposed Project:
a. The Proposed Project is consistent with the goals, objectives, policies and programs of the General Plan;
b. The Proposed Project complies with all applicable zoning and other regulations;
c. The Proposed Project will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity;
d. The location, design and operation of the Proposed Project will be compatible with existing and planned land uses in the vicinity.

## Section 5. Approval

That based on the foregoing Recitals, Evidence contained in the Administrative Record and Findings, as set forth herein, the City Council hereby approves the Proposed Project subject to the Conditions of Approval for the Master Plot Plan (PEN22-0238), attached hereto as Exhibit A, and Conditions of Approval for the Conditional Use Permit (PEN22-0176), attached hereto as Exhibit B.

## Section 6. Repeal of Conflicting Provisions

That all the provisions heretofore adopted by the City Council that are in conflict with the provisions of this Resolution are hereby repealed.

## Section 7. Severability

That the City Council declares that, should any provision, section, paragraph, sentence, or word of this Resolution be rendered or declared invalid by any final court action in a court of competent jurisdiction or by reason of any preemptive legislation, the remaining provisions, sections, paragraphs, sentences or words of this Resolution as hereby adopted shall remain in full force and effect.

## Section 8. Effective Date

That this Resolution shall take effect immediately upon the date of adoption.

## Section 9. Certification

That the City Clerk for the City Council shall certify to the passage of this Resolution.
[Remainder of Page Intentionally Left Blank]

## PASSED AND ADOPTED THIS 19 th DAY OF DECEMBER 2023.

## CITY OF MORENO VALLEY CITY COUNCIL

Ulises Cabrera,
Mayor of the City of Moreno Valley

## ATTEST:

Jane Halstead,
City Clerk

APPROVED AS TO FORM:

Steven B. Quintanilla,
City Attorney
Exhibits:
Exhibit A: Master Plot Plan (PEN22-0238), Conditions of Approval
Exhibit B: Conditional Use Permit (PEN22-0176), Conditions of Approval

Telephone: 951.413.3206

CITY OF MORENO VALLEY<br>PROBABLE CONDITIONS OF APPROVAL<br>Plot Plan (PEN22-0238)

## COMMUNITY DEVELOPMENT DEPARTMENT

## Planning Division

1. A change or modification to the land use or the approved site plans may require a separate approval. Prior to any change or modification, the property owner shall contact the City of Moreno Valley Community Development Department to determine if a separate approval is required.
2. In accordance with the Developer's obligation to defend, indemnify and hold harmless the City, including but not limited to as set forth in more detail in the Project's Conditions of Approval, Moreno Valley Municipal Code Section 9.02.310 (Indemnification of City for Discretionary Approvals), and the Project application, Developer shall enter into an Advanced Funding Agreement with the City no later than ten (10) calendar days from Planning Commission's approval of the Project. A copy of said Agreement is on file with the Community Development Director.
3. Any expansion to this use or exterior alterations will require the submittal of a separate application(s) and shall be reviewed and approved under separate permit(s). (MC 9.02.080)
4. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)
5. The expiration date of this modification does not extend the expiration of any related project or activity.
6. This approval shall expire three years after the approval date of this project unless used or extended as provided for by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever. Use means the beginning of substantial construction contemplated by this approval within the three-year period, which is thereafter pursued to completion, or the beginning of substantial utilization contemplated by this approval. (MC 9.02.230)
7. In the event the use hereby permitted ceases operation for a period of one (1) year
or more, or as defined in the current Municipal Code, this permit may be revoked in accordance with provisions of the Municipal Code. (applicable to CUP's)
8. The Developer shall defend, indemnify and hold harmless the City, city council, commissions, boards, subcommittees and the City's elected and appointed officials, commissioners, board members, officers, agents, consultants and employees ("City Parties") from and against any and all liabilities, demands, claims, actions or proceedings and costs and expenses incidental thereto (including costs of defense, settlement and reasonable attorneys' fees), which any or all of them may suffer, incur, be responsible for or pay out as a result of or in connection with any challenge to the legality, validity or adequacy of any of the following items: (i) any prior or current agreements by and among the City and the Developer; (ii) the current, concurrent and subsequent permits, licenses and entitlements approved by the City; (iii) any environmental determination made by the City in connection with the Project Site and the Project; and (iv) any proceedings or other actions undertaken by the City in connection with the adoption or approval of any of the above. In the event of any administrative, legal, equitable action or other proceeding instituted by any third party (including without limitation a governmental entity or official) challenging the legality, validity or adequacy of any of the above items or any portion thereof, the Parties shall mutually cooperate with each other in defense of said action or proceeding. Notwithstanding the above, the City, at its sole option, may tender the complete defense of any third party challenge as described herein. In the event the City elects to contract with special counsel to provide for such a defense, the City shall meet and confer with the Developer regarding the selection of counsel, and the Developer shall pay all costs related to retention of such counsel by the City.
9. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)
10. The site shall be developed in accordance with the approved plans on file in the Community Development Department - Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official. (MC 9.14.020)
11. Any signs indicated on the submitted plans are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), require separate application and approval by the Planning Division. No signs are permitted in the public right of way. (MC 9.12)
12. All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.

## Special Conditions

13. The site has been approved for a Master Plot Plan (PEN22-0238) and Conditional

Use Permit (PEN22-0176) for a commercial development comprised of an eight (8) island fueling station, six (6) vehicle charging stations, 7,400 square foot market, and a 1,790 square foot drive-thru carwash, including a state-of-the-art security system with alarms, surveillance cameras and security lighting, and the prohibition of alcohol beverage sales, on a 1.31-acre site. A change or modification shall require separate approval. For a Conditional Use Permit, violation may result in revocation of the Conditional Use Permit.
14. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security shall remain in place until the project is completed or the above conditions no longer exist. (Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard).
15. Drive-through speaker system for the carwash shall not be detectable above daytime ambient noise levels beyond the property line boundaries, and shall not exceed fifty-five (55) dBA at any one time beyond the boundaries of the property line. (MC9.09.080 C. 6 and 9.10.140)
16. The use of the carwash and vacuum stations shall be limited to the operating hours of 8:00 a.m. and 10:00 p.m. The use of the carwash and vacuum stations shall be prohibited between 10:00 p.m. and 8:00 a.m.
17. The owner or owner's representative shall establish and maintain a relationship with the City of Moreno Valley and cooperate with the Problem Oriented Policing (POP) program, or its successors.
18. One outdoor trash receptacle shall be provided shall be provided for every ten (10) required parking spaces, with a minimum of one receptacle provided to be located front portion of the site for use by patrons. (MC 9.09.080 C 5.)
19. Prior to approval of any grading permit, the tree plan shall be submitted to and approved by the Panning Division. The plan shall identify all mature trees (4 inch trunk diameter or larger) on the subject property and City right-of-way. Using the grading plan as a base, the plan shall indicate trees to be relocated, retained, and removed. Replacement trees shall be shown on the plan, be a minimum size of 24 inch box, and meet a ratio of three replacement trees for each mature tree removed or as approved by the Planning Official. (GP Objective 4.4, 4.5, DG)

## Prior to Building Permit

20. Prior to issuance of any building permit, all Conditions of Approval, and Mitigation Measures shall be printed on the building plans.
21. Prior to the issuance of building permits, the developer shall provide documentation that contact was made to the U.S. Postal Service to determine the appropriate type and location of mailboxes.
22. Prior to issuance of any building permits, final landscaping and irrigation plans shall be submitted for review and approved by the Planning Division. After the third plan check review for landscape plans, an additional plan check fee shall apply. The plans shall be prepared in accordance with the City's Landscape Requirements and shall include:
a. A three (3) foot high decorative wall, solid hedge or berm shall be placed in any setback areas between a public right of way and a parking lot for screening.
b. Finger and end planters with required step outs and curbing shall be provided every 12 parking stalls as well as at the terminus of each aisle.
c. Drought tolerant landscape shall be used. Sod shall be limited to gathering areas. (or No sod shall be installed)
d. Street trees shall be provided every 40 feet on center in the right of way.
e. On-site trees shall be planted at an equivalent of one (1) tree per thirty (30) linear feet of the perimeter of a parking lot and per thirty linear feet of a building dimension for the portions of the building visible from a parking lot or right of way. Trees may be massed for pleasing aesthetic effects.
f. Enhanced landscaping shall be provided at all driveway entries and street corner locations The review of all utility boxes, transformers etc. shall be coordinated to provide adequate screening from public view.
g. Landscaping on three sides of any trash enclosure.
h. All site perimeter and parking lot landscape and irrigation shall be installed prior to the release of certificate of any occupancy permits for the site or pad in question (master plot plan). [only include items above that apply to the project]
23. Prior to issuance of building permits, the Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping. (GP Objective 43.30)
24. Prior to issuance of a building permit, the developer/property owner or developer's successor-in-interest shall pay all applicable impact fees due at permit issuance, including but not limited to Multi-species Habitat Conservation Plan (MSHCP) mitigation fees. (Ord)
25. Prior to building final, the developer/owner or developer's/owner's
successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), and the City's adopted Development Impact Fees. (Ord)
26. Prior to issuance of building permits, proposed covered trash enclosure(s) shall be included in the Planning review of the Fence and Wall plans. The trash enclosure (s), including the roof materials, shall be compatible with the architecture, color and materials of the building(s) design. Trash enclosure areas shall include landscaping on three sides unless located within the truck loading area. Approved design plans shall be included in a Building submittal (Fence and walls or building design plans). (GP Objective 43.6, DG)
27. Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:
a. The name (if applicable) and address of the development.
b. The developer's name, address, and a 24-hour emergency telephone number.
28. Prior to issuance of grading permits, the location of the trash enclosure shall be included on the plans.
29. Prior to approval of any grading permit, the tree plan shall be submitted to and approved by the Planning Division. The plan shall identify all mature trees (4 inch trunk diameter or larger) on the subject property and City right-of-way. Using the grading plan as a base, the plan shall indicate trees to be relocated, retained, and removed. Replacement trees shall be shown on the plan, be a minimum size of 24 inch box, and meet a ratio of three replacement trees for each mature tree removed or as approved by the Planning Official. (GP Objective 4.4, 4.5, DG)
30. At least thirty days prior to issuance of any grading permit, the developer shall retain a qualified archaeologist, provide a letter identifying the name and qualifications of the archaeologist to the Planning Division for approval, to monitor all ground disturbing activities in an effort to identify any unknown archaeological resources and to evaluate and recommend appropriate actions for any archaeological deposits exposed by construction activity.

At least thirty days prior to issuance of a grading permit, the applicant shall provide evidence that contact has been established with the appropriate Native American Tribe(s), providing notification of grading, excavation and the proposed monitoring program and to coordinate with the City and Tribe(s) to develop a cultural resources treatment and monitoring agreement. The agreement shall address treatment of known cultural resources, the designation, responsibilities and participation of Tribal monitors during grading, excavation and ground disturbing activities; project grading and development scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site.

A report documenting the proposed methodology for grading monitoring shall be submitted to and approved by the Planning Division prior to issuance of any grading permit. The monitoring archaeologist shall be empowered to stop and redirect grading in the vicinity of an exposed archaeological deposit until that deposit can be fully evaluated. The archaeologist shall consult with affected Tribe(s) to evaluate any archaeological resources discovered on the project site. Tribal monitors shall be allowed to monitor all grading, excavation and groundbreaking activities, and shall also have authority to stop and redirect grading activities in consultation with the project archaeologist.

The property owner shall relinquish ownership to the Tribe(s) of all Native American cultural resources, including sacred items, burial goods and all archaeological artifacts that are found on the project site for proper treatment and disposition. All sacred sites, should they be encountered with the project site, shall be avoided and preserved as the preferred mitigation.

If any inadvertent discoveries of subsurface archaeological or cultural resources occur during grading, the applicant, project archaeologist, and Tribe(s) shall assess the significance of such resources and shall meet and confer regarding mitigation of such resources. Avoidance is the preferred method of preservation of archaeological resources. If the applicant, project archaeologist and Tribe(s) cannot agree on the significance or mitigation for such resources, the issue(s) will be presented to the Planning Official with adequate documentation. The Official shall make a determination based on the provisions of CEQA and consideration of the religious beliefs, customs and practices of the Tribe(s).
31. Prior to issuance of any grading permit, all Conditions of Approval, and Mitigation Measures shall be printed on the grading plans.
32. Prior to issuance of any grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project approval. No City permit or approval shall be issued until such fee is paid. (CEQA)
33. If potential historic, archaeological, Native American cultural resources or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered during grading and other construction excavation, no further disturbance shall occur until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within 5 -days of the published finding to be given a reasonable opportunity to identify the "most likely descendant." The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).
34. Prior to issuance of grading permits, the developer shall submit wall/fence plans to the Building and Safety Division for review and approval by the Planning Division as follows:
a. A maximum 6-foot high solid decorative block perimeter wall with pilasters and a cap shall be required adjacent to all residential zoned areas.
b. 3-foot high decorative wall, solid hedge, or berm shall be placed in any setback areas between a public right of way and a parking lot for screening.
c. Any proposed retaining walls shall also be decorative in nature, while the combination of retaining and other walls on top shall not exceed the height requirement.
d. Proposed screening walls for truck loading areas and required loading docks shall also include decorative block walls with pilasters with a height of up to fourteen (14) feet to fully screen trucks (industrial and some situations with commercial uses).
e. Walls and fences for visual screening are required when there are adjacent residential uses or residentially zone property. The height, placement, and design will be based on a site-specific review of the project. All walls are subject to the approval of the Planning Official. (MC 9.08.070) [select those that apply]

## Prior to Building Final or Occupancy

35. Prior to building final, all required landscaping and irrigation shall be installed per plan, certified by the Landscape Architect and inspected by the Planning Division. (MC 9.03.040, MC 9.17).
36. Prior to building final, Planning approved/stamped landscape plans shall be provided to the Community Development Department - Planning Division on a CD disk.
37. Prior to building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Planning Division. (MC 9.080.070).
38. Prior to building final or Certificate of Occupancy, the owner or owner's representative shall provide documentation to the Planning Division that they have
contacted the Moreno Valley Police Department to establish and maintain a relationship with the City of Moreno Valley Police Department and cooperate with the Problem Oriented Policing (POP) program, or its successors. [multi-family, night clubs, liquor stores]

## Building Division

39. The proposed non-residential project shall comply with the latest Federal Law, Americans with Disabilities Act, and State Law, California Code of Regulations, Title 24, Chapter 11B for accessibility standards for the disabled including access to the site, exits, bathrooms, work spaces, etc.
40. Prior to submittal, all new development, including residential second units, are required to obtain a valid property address prior to permit application. Addresses can be obtained by contacting the Building Safety Division at 951.413.3350.
41. Contact the Building Safety Division for permit application submittal requirements.
42. Any construction within the city shall only be completed between the hour of seven a.m. to seven p.m. Monday through Friday, excluding holidays and from eight a.m. to four p.m. on Saturday, unless written approval is obtained from the city building official or city engineer (Municipal Code Section 8.14.040.E).
43. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.
44. The proposed development is subject to the payment of applicable processing fees as required by the City's current Fee Ordinance at the time a building permit application is submitted or prior to the issuance of permits as determined by the City.
45. The proposed project will be subject to approval by the Eastern Municipal Water District and all applicable fees and charges shall be paid prior to permit issuance. Contact the water district at 951.928 .3777 for specific details.
46. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, accessibility, etc.
47. The proposed non-residential project shall comply with California Green Building Standards Code, Section 5.106.5.3, mandatory requirements for Electric Vehicle Charging Station (EVCS).
48. The proposed project's occupancy shall be classified by the Building Official and must comply with exiting, occupancy separation(s) and minimum plumbing fixture requirements. Minimum plumbing fixtures shall be provided per the California Plumbing Code, Table 422.1. The occupant load and occupancy classification shall be determined in accordance with the California Building Code.
49. Prior to permit issuance, every applicant shall submit a properly completed Waste Management Plan (WMP), as a portion of the building or demolition permit process. (MC 8.80.030)
50. The appropriation from local tax from construction contracts to the local jurisdiction of the specific construction job site is hereby required. This is accomplished by a contractor or subcontractor obtaining a construction site sub-permit for the job site. The contractors, or subcontracts, that have individual contracts with a value of $\$ 5$ million or more are subject to this condition.
The qualifying contract price applies to each contract or subcontract for work performed at the jobsite, and not to the total value of the prime contract. In order to obtain a jobsite sub-permit, the contractor or subcontractor must meet the following criteria:
a) have an active permit with the California Department of Tax and Fee Administration (CDTFA),
b) must be registered as a retailer, not consumer, of materials, and
c) have an executed contract over $\$ 5$ million to install materials at the jobsite.

The Prime Contractor will require that the subcontractors or other contractors exercise their option to obtain a California Department of Tax \& Fee Administration construction site sub-permit for the jobsite and allocate all eligible use tax payments to the City of Moreno Valley. Prior to any Notice to Proceed(s), the Prime Contractor shall provide the City of Moreno Valley Finance and Management Services Department with a list of subcontractors associated with the project along with a copy of their sub-permit that shows their CDTFA account number or a signed statement that sales and use tax does not apply to their portion of the project.

## FIRE DEPARTMENT

## Fire Prevention Bureau

51. All Fire Department access roads or driveways shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])
52. The Fire Department emergency vehicular access road shall be (all weather surface) capable of sustaining an imposed load of $80,000 \mathrm{lbs}$. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. The approved fire access road shall be in place during the time of construction. Temporary fire access roads shall be approved by the Fire Prevention Bureau. (CFC 501.4, and MV City Standard Engineering Plan 108d)
53. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft ( 0.3 m drop in 6 m ), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)
54. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4)
55. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (CFC 501.3)
56. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)
57. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve inches in height. (CFC 505.1, MVMC 8.36.060[1])
58. Prior to issuance of Certificate of Occupancy, approval shall be required from the County of Riverside Community Health Agency (Department of Environmental Health) and Moreno Valley Fire Prevention Bureau to maintain, store, use, handle materials, or conduct processes which produce conditions hazardous to life or property, and to install equipment used in connection with such activities. (CFC 105)
59. Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 507, 501.3) a - After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.
60. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in effect at the time of building plan submittal.
61. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.100)
62. The Fire Code Official is authorized to enforce the fire safety during construction requirements of Chapter 33. (CFC Chapter 33 \& CBC Chapter 33)
63. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)
64. Fire lanes and fire apparatus access roads shall have an unobstructed width of not
less than twenty-four (24) feet and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])
65. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])
66. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.060, CFC 501.4)
67. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Code Official. All exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)
68. The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the C.F.C., MVMC, and NFPA 24. Fire hydrants shall be located no closer than 40 feet to a building. A fire hydrant shall be located within 50 feet of the fire department connection for buildings protected with a fire sprinkler system. The size and number of outlets required for the approved fire hydrants are ( $6 " \times 4 " \times 21 / 2^{\prime \prime} \times 21 / 2 "$ ) (CFC 507.5.1, 507.5.7, Appendix C, NFPA 24-7.2.3, MVMC 912.2.1)
69. Fire Department access driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. (CFC 503 and MVMC 8.36.060, CFC 501.4)
70. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)
71. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)
72. Plans for private water mains supplying fire sprinkler systems and/or private fire hydrants shall be submitted to the Fire Prevention Bureau for approval. (CFC 105 and CFC 3312.1)
73. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering said waterflow for 2 hour(s) duration at $20-\mathrm{PSI}$ residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection
measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 507.3, Appendix B)
74. Dead-end streets and/or fire apparatus access roads in excess of 150 feet in length shall be provided with an approved turnaround for fire apparatus.
75. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5)
76. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall be responsible for obtaining underground and/or above ground tank permits for the storage of combustible liquids, flammable liquids, or any other hazardous materials from both the County of Riverside Community Health Agency Department of Environmental Health and the Fire Prevention Bureau. (CFC 105)
77. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall: a. Be signed by a registered civil engineer or a certified fire protection engineer; b. Contain a Fire Prevention Bureau approval signature block; and c. Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

## FINANCIAL \& MANAGEMENT SERVICES DEPARTMENT

## Moreno Valley Utility

78. This project requires the installation of electric distribution facilities. A non-exclusive easement shall be provided to Moreno Valley Utility and shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.
79. This project requires the installation of electric distribution facilities. The developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer shall execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City all utility infrastructure including but not limited to, conduit, equipment, vaults, ducts, wires (including fiber optic
cable), switches, conductors, transformers, and "bring-up" facilities including electrical capacity to serve the identified development and other adjoining, abutting, or benefiting projects as determined by Moreno Valley Utility - collectively referred to as "utility system" (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and/or delivery of any and all "utility services" to and within the project. For purposes of this condition, "utility services" shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. "Utility services" shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval.

The City, or the City's designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer's sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system.
80. Existing Moreno Valley Utility electrical infrastructure shall be preserved in place. The developer will be responsible, at developer's expense, for any and all costs associated with the relocation of any of Moreno Valley Utility's underground electrical distribution facilities, as determined by Moreno Valley Utility, which may be in conflict with any developer planned construction on the project site.
81. This project shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City fiber optic cable improvements consisting of fiber optic cable, splices and termination equipment to serve the identified development and other adjoining, abutting, or benefiting projects as determined by Moreno Valley Utility along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and/or delivery of any and all "fiber optic services" to and within the project.
82. This project shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to Moreno Valley Utility fiber optic cable improvements consisting of conduit, and pull boxes to serve the identified development and other adjoining, abutting, or benefiting projects as determined by Moreno Valley Utility along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and/or delivery of any and all "fiber optic services" to and within the project.
83. This project shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to Moreno Valley Utility electric streetlight improvements consisting of streetlight poles, mast-arms, fixtures conduit, wiring, terminations and pull boxes to serve the identified development and other adjoining, abutting, or benefiting projects as determined by the Land Development Department along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and/or delivery of any and all "street light services" to and within the project.

## PUBLIC WORKS DEPARTMENT

## Land Development

84. Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, shall be required prior to $90 \%$ security reduction or the end of the one-year warranty period of the public streets as approved by the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half ( 2 to $2 \frac{1}{2}$ ) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.
85. The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]
86. The final approved conditions of approval (COAs) and any applicable Mitigation Measures issued by the Planning Division shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plans.
87. The developer shall monitor, supervise and control all construction related activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
(a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.
(b) Observance of working hours as stipulated on permits issued by the Land Development Division.
(c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
(d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.
Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.
88. Drainage facilities (e.g., catch basins, water quality basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.
89. In the event right-of-way or offsite easements are required to construct offsite
improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. [GC 66462.5]
90. If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit. [MC 9.14.210(B)(C)]
91. The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]
92. The maintenance responsibility of the proposed storm drain line shall be clearly identified. Storm drain lines within private property will be privately maintained and those within public streets will be publicly maintained.
93. The proposed private storm drain system shall connect to the onsite proposed underground basin and then discharge offsite through an outlet at the northwest corner of the parcel.
94. This project shall submit civil engineering design plans, reports and/or documents (prepared by a registered/licensed civil engineer) for review and approval by the City Engineer per the current submittal requirements, prior to the indicated threshold or as required by the City Engineer. The submittal consists of, but is not limited to, the following:
a. Rough grading w/ erosion control plan (prior to grading permit issuance);
b. Precise grading w/ erosion control plan (prior to grading permit issuance);
c. Public improvement plan (e.g., street/storm drain with striping, sewer/water, etc.) (prior to encroachment permit issuance).
d. Final drainage study (prior to grading plan approval);
e. Final WQMP (prior to grading plan approval);
f. Easements, offers of dedication, etc. (prior to building permit issuance);
g. As-Built revision for all plans (prior to occupancy release).
95. Water quality best management practices (BMPs) designed to meet Water Quality Management Plan (WQMP) requirements for development shall not be used as a construction BMP. Water quality BMPs shall be maintained for the entire duration of the project construction and be used to treat runoff from those developed portions of the project. Water quality BMPs shall be protected from upstream construction
related runoff by having proper best management practices in place and maintained. Water quality BMPs shall be graded per the approved design plans and once landscaping and irrigation has been installed, it and its maintenance shall be turned over to the private owner association (POA) or responsible party for maintenance.
96. For non-subdivision projects, execution of a Public Improvement Agreement (PIA) and/or security (in the form of a cash deposit or other approved means) may be required as determined by the City Engineer. [MC 9.14.220]
97. Any work performed within public right-of-way requires an encroachment permit.

## Prior to Grading Plan Approval

98. Resolution of all drainage issues shall be as approved by the City Engineer.
99. A final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include, but not be limited to: existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. The study shall analyze 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.
100. Emergency overflow areas shall be shown at all applicable drainage improvement locations in the event that the drainage improvement fails or exceeds full capacity.
101. A final project-specific Water Quality Management Plan (WQMP) shall be submitted for review and approved by the City Engineer, which:
a. Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;
b. Incorporates Source Control BMPs and provides a detailed description of their implementation;
c. Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and
d. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.
A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division. A digital (pdf) copy of the approved final project-specific Water Quality Management Plan (WQMP) shall be submitted to the Land Development Division.
102. The final project-specific Water Quality Management Plan (WQMP) shall be consistent with the approved P-WQMP, as well as in full conformance with the document: "Water Quality Management Plan - A Guidance Document for the Santa Ana Region of Riverside County" dated October 22, 2012. The F-WQMP shall be submitted and approved prior to application for and issuance of grading permits. At
a minimum, the F-WQMP shall include the following: Site Design BMPs; Source Control BMPs, Treatment Control BMPs, Operation and Maintenance requirements for BMPs and sources of funding for BMP implementation.
a. The Applicant has proposed to incorporate the use of underground infiltration chambers, inlet filter inserts, and vegetated swale. Final design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance document.
b. The Applicant shall substantiate the applicable Hydrologic Condition of Concerns (HCOC) in Section $F$ of the F-WQMP. The HCOC designates that the project will be exempt from mitigation requirements based on Exemption 3.
c. All proposed LID BMP's shall be designed in accordance with the RCFC\&WCD's Design Handbook for Low Impact Development Best Management Practices, dated September 2011.
d. The proposed LID BMP's as identified in the project-specific P-WQMP shall be incorporated into the Final WQMP.
e. The NPDES notes per City Standard Drawing No. MVFE-350-0 shall be included in the grading plans.
f. Post-construction treatment control BMPs, once placed into operation for post-construction water quality control, shall not be used to treat runoff from construction sites or unstabilized areas of the site.
g. Prior to precise grading plan approval, the grading plan shall show any proposed trash enclosure to include a cover (roof) and sufficient size for dual bin (1 for trash and 1 for recyclables). The architecture shall be approved by the Planning Division and
103. The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:
a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.
b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.
c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.
d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.
104. Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
105. The developer shall select Low Impact Development (LID) Best Management Practices (BMPs) designed per the latest version of the Water Quality Management Plan (WQMP) - a guidance document for the Santa Ana region of Riverside County.
106. The developer shall submit recorded slope easements from adjacent property owners in all areas where grading resulting in slopes is proposed to take place outside of the project boundaries. For all other offsite grading, written permission from adjacent property owners shall be submitted.
107. A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.
108. Any proposed trash enclosure shall include a solid cover (roof) and sufficient size for dual bin (one for trash and one for recyclables). The architecture shall be approved by the Planning Division and any structural approvals shall be made by the Building \& Safety Division.
109. For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID\#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

## Prior to Grading Permit

110. A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]
111. For non-subdivision projects, a copy of the Covenants, Conditions and Restrictions (CC\&Rs) shall be submitted for review by the City Engineer. The CC\&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project.
112. If the developer chooses to construct the project in phases, a Construction Phasing Plan for the construction of on-site public or private improvements shall be submitted for review and approved by the City Engineer.
113. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]
114. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]

## Prior to Improvement Plan Approval

115. The developer is required to bring any existing access ramps adjacent to and
fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless otherwise approved by the City Engineer.
116. The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.
117. The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.
118. Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.
119. The hydrology study shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of current City standards shall apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the City Engineer. [MC 9.14.110 A.2]
120. All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
121. Any missing or deficient existing improvements along the project frontage shall be constructed or secured for construction. The City Engineer may require the ultimate structural section for pavement to half-street width plus 18 feet or provide core test results confirming that existing pavement section is per current City Standards; additional signing \& striping to accommodate increased traffic imposed by the development, etc.
122. Prior to improvement plan approval, pavement core samples of existing pavement shall be taken and findings submitted to the City for review and consideration of pavement improvements. The City will determine the adequacy of the existing pavement structural section. If the existing pavement structural section is found to be adequate, the developer may still be required to perform a 2 inch grind and overlay or slurry seal, depending on the severity of existing pavement cracking, as required by the City Engineer. If the existing pavement section is found to be inadequate, the Developer shall replace the pavement to meet or exceed the City's pavement structural section standard.
123. For non-subdivision projects, all street dedications shall be free of encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.
124. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the

City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.
125. All dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.

## Prior to Building Permit

126. An engineered-fill certification, rough grade certification and compaction report shall be submitted for review and approved by the City Engineer. A digital (pdf) copy of the approved compaction report shall be submitted to the Land Development Division. All pads shall meet pad elevations per approved grading plans as noted by the setting of "blue-top" markers installed by a registered land surveyor or licensed civil engineer.
127. Prior to building permit issuance, the developer shall dedicate the following right of way to accommodate the required improvements:
(a) The necessary street right of way dedication on the west side of Oliver Street ( 88 ' R/W / 64' CC: Minor Arterial, City Standard No. MVSI-105A-2) along the project frontage.
(b) The necessary street right of way dedication on the north side of Iris Avenue (134' R/W / 110' CC: Divided Major Arterial, City Standard No. MVSI-101A-1) for transition, alignment, and/or drainage purposes.
(c) A 4 foot minimum pedestrian right of way dedication behind any driveway approach per City Standard No. MVSI-112C-0, as applicable.
(d) Corner cutback right of way dedication per City Standard No. MVSI-165-0 on all intersecting public streets, as directed by the City Engineer.
128. For non-subdivision projects, all street dedications shall be free of encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.
129. A walk through with a Land Development Inspector shall be scheduled to inspect existing improvements within public right of way along project frontage. Any missing, damaged or substandard improvements including ADA access ramps that do not meet current City standards shall be required to be installed, replaced and/or repaired. The applicant shall post security to cover the cost of the repairs and complete the repairs within the time allowed in the public improvement agreement used to secure the improvements.
130. Certification to the line, grade, flow test and system invert elevations for the water quality control BMPs shall be submitted for review and approved by the City

Engineer.
131. All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
132. The final/precise grade certification shall be submitted for review and approved by the City Engineer.
133. The developer shall complete all public improvements in conformance with current City standards, except as noted in the Special Conditions, including but not limited to the following:
a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights (MVU: SL-2), signing, striping, landscaping and irrigation, medians, and traffic control devices as appropriate.
b. Storm drain facilities including, but not limited to: storm drain pipe and storm drain laterals.
c. City-owned utilities.
d. Sewer and water systems including, but not limited to: sanitary sewer, potable water, and recycled water.
134. Prior to occupancy, the following improvements shall be completed:

Oliver Street (88' R/W / 64' CC: Minor Arterial, City Standard No. MVSI-105A-2) shall be constructed to achieve a half-width of 32 ' plus 18 ' beyond centerline, along the entire project's east frontage. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, any necessary offsite joins to existing, pedestrian ramps, and dry and wet utilities. Any missing or deficient improvements along the project's east frontage shall be constructed.
Prior to improvement plan approval, the developer shall provide to the City Engineer the results of coring tests confirming that said existing pavement section has been constructed per City Standard No. MVSI-105A-2.
135. For commercial, industrial and multi-family projects, a "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant", "Maintenance Agreement for Water Quality Improvements located in the public right-of-way" and a "Declaration of Restrictive Covenants (encroachment on City easement)" shall be recorded to provide public notice of the maintenance requirements to be implemented per the approved final project-specific WQMP. A boilerplate copy of the covenants and agreements can be obtained by contacting the Land Development Division.
136. The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:
a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).
b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.
137. The Developer shall comply with the following water quality related items:
a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.
b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;
c. Demonstrate that Developer is prepared to implement all non-structural BMPs described in the approved final project-specific WQMP; and
d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.
e. Clean and repair the water quality BMP's, including re-grading to approved civil drawing if necessary.
f. Obtain approval and complete installation of the irrigation and landscaping.
138. Prior to occupancy, the following improvements shall be completed:

Iris Avenue (134' R/W / 110' CC: Divided Major Arterial, City Standard No. MVSI-101A-1) shall be constructed to achieve a half-width of $55^{\prime}$ along the entire project's south frontage. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, any necessary offsite joins to existing, street lights, pedestrian ramps, and dry and wet utilities. Any missing or deficient improvements along the project's south frontage shall be constructed.
Prior to improvement plan approval, the developer shall provide to the City Engineer the results of coring tests confirming that said existing pavement section has been constructed per City Standard No. MVSI-101A-1. Any missing or deficient improvements along the project's south frontage shall be constructed prior to issuance of a certificate of occupancy.

## Special Districts Division

139. Street Light Coordination/Advanced Energy Fees. Prior to the issuance of the 1st Building Permit for this project, the Developer shall pay New Street Light Installation Fees for all street lights required to be installed for this development. Payment will be collected by the Land Development Division. Fees are based on the street light administration/coordination and advanced energy fees as set forth in the City Fees, Charges, and Rates as adopted by City Council and effective at the time of payment. Any change in the project which increases the number of street lights to be installed requires payment of the fees at the then current fee. Questions may be directed to the Special Districts Administration at 951.413.3470 or SDAdmin@moval.org.
140. CFD 2014-01. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee, form an association to fund the services or fund an endowment) to provide an ongoing funding source for Street Lighting Services for capital improvements, energy charges, and maintenance.

This condition must be fully satisfied prior to issuance of the 1st Certificate of

Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

Alternatively, the condition can be satisfied by the Developer forming a property owner association that will be responsible for the improvements and any and all operation and maintenance costs for the improvements o
141. Major Infrastructure SFD Major Infrastructure Financing District. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for the construction and maintenance of major infrastructure improvements, which may include but is not limited to thoroughfares, bridges, and certain flood control improvements. This condition will be applicable provided said district is under development at the time this project applies for the 1st Building Permit. This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings. An alternative to satisfying this condition will be identified at such time as a special
142. Park Maintenance Funding. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or fund an endowment) to provide an ongoing funding source for the continued maintenance, enhancement, and/or retrofit of parks, open spaces, linear parks, and/or trails systems.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

Alternatively, the condition can be satisfied by the Developer funding an endowment in an amount sufficient to yield an annual revenue stream that meets the annual obligation, as calculated by Special Districts Admin staff. The Developer must contact Special Districts Administration at 951.413.3470 or at SDAdmin@moval.org to satisfy this condition.
143. Maintenance Services Funding. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for the operation and maintenance of public improvements and/or services associated with impacts of the development. This condition will only be applicable provided said district is under development at the time this project applies for the 1st Building Permit.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

An alternative to satisfying this funding source will be identified at such time as a special financing district has been established. At the time of development, the
developer must
144. Public Safety Funding. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for Public Safety services, which may include but is not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. This condition will only be applicable provided said district is under development at the time this project applies for the 1st Building Permit.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

An alternative to satisfying this condition will be identified at such time as a special financing district has been established. At the time of dev
145. Maintenance Responsibility. The ongoing maintenance of any landscaping required to be installed behind the curb shall be the responsibility of the property owner.
146. Damage. Any damage to existing landscape areas maintained by the City of Moreno Valley due to project construction shall be repaired/replaced by the Developer, or Developer's successors in interest, at no cost to the City of Moreno Valley.
147. The ongoing maintenance of any water quality BMP (e.g. Bioswale) constructed in the public right of way shall be the responsibility of a property owner association or the property owner.
148. The existing parkway behind the curb will no longer be maintained by the City and will become the responsibility of the property owner. Please coordinate abandonment of existing City irrigation system with Landscape Services at 951-413-3480.

## Transportation Engineering Division

149. Conditions of approval may be modified or added if a phasing plan is submitted for
this development.
150. Project driveways shall conform to City of Moreno Valley Standard Plans No. MVSI-112C-0 for Commercial Driveway Approaches. Access at the project driveways shall be as follows:

- Iris Avenue: Right-Turn In/Out Only (Shared Access)
- Oliver Street: Right-Turn In/Out Only

151. Iris Avenue is classified as a Divided Major Arterial (134'RW/110'CC) per City Standard Plan No. MVSI-101A-1. Any improvement undertaken by this project shall be in conformance with City standards. Communication conduit shall be installed per City Standard Plan No. MVSI-186-0.
152. Oliver Street is classified as a Minor Arterial per City Standard Plan No. MVSI-105A-2. Any improvements undertaken by this project shall be in conformance with City standards.
153. Prior to final approval of any landscaping or monument sign plans, the project plans shall demonstrate that sight distance at the project driveways conforms to City Standard Plan No. MVSI-164A, B, C-0.
154. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets within the project area.
155. Prior to the final approval of the street improvement plans, a bus turnout in the westbound direction along Iris Avenue, west of Oliver Street shall be designed per City Standard Plan No. MVSI-161-0. The bus turnout shall be designed to serve as a combination right turn lane/bus bay to the satisfaction of the City Engineer.
156. Prior to the final approval of the street improvement plans, the existing landscaped median on Iris Avenue along the project frontage shall be designed to extend the existing eastbound left-turn lane storage length to a minimum of 285 feet at the Iris Avenue/Oliver Street intersection. Median construction shall include but is not limited to, paving, concrete curbs, landscape, and signs. Exact requirements will be determined during the plan check process.
157. Prior to issuance of a certificate of occupancy, all approved street improvements including the median and bus turnout improvements shall be installed to the satisfaction of the City Engineer.
158. Driveway on Iris Avenue shall be shared driveway and shall be designed to the satisfaction of the City Engineer. An irrevocable shared access agreement shall be provided for APNs 486-310-039, 486-310-041, and 486-310-042 and shall be provided prior to issuance of a building permit.

## PARKS \& COMMUNITY SERVICES DEPARTMENT

159. This project is subject to current Development Impact Fees.

## Exhibit B

Conditional Use Permit (PEN22-0176) Conditions of Approval

Planning Division
14177 Frederick Street
P. O. Box 88005

Moreno Valley CA 92552-0805
Telephone: 951.413.3206

## CITY OF MORENO VALLEY <br> PROBABLE CONDITIONS OF APPROVAL <br> Conditional Use Permit (PEN22-0176)

## COMMUNITY DEVELOPMENT DEPARTMENT

## Planning Division

1. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)
2. A change or modification to the land use or the approved site plans may require a separate approval. Prior to any change or modification, the property owner shall contact the City of Moreno Valley Community Development Department to determine if a separate approval is required.
3. In accordance with the Developer's obligation to defend, indemnify and hold harmless the City, including but not limited to as set forth in more detail in the Project's Conditions of Approval, Moreno Valley Municipal Code Section 9.02.310 (Indemnification of City for Discretionary Approvals), and the Project application, Developer shall enter into an Advanced Funding Agreement with the City no later than ten (10) calendar days from Planning Commission's approval of the Project. A copy of said Agreement is on file with the Community Development Director.
4. Any expansion to this use or exterior alterations will require the submittal of a separate application(s) and shall be reviewed and approved under separate permit(s). (MC 9.02.080)
5. The developer, or the developer's successor-in-interest, shall be responsible for maintaining any undeveloped portion of the site in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)
6. The expiration date of this modification does not extend the expiration of any related project or activity.
7. This approval shall expire three years after the approval date of this project unless used or extended as provided for by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever. Use means the beginning of substantial construction contemplated by this approval within the three-year period, which is thereafter pursued to completion, or the beginning of
substantial utilization contemplated by this approval. (MC 9.02.230)
8. In the event the use hereby permitted ceases operation for a period of one (1) year or more, or as defined in the current Municipal Code, this permit may be revoked in accordance with provisions of the Municipal Code. (applicable to CUP's)
9. The Developer shall defend, indemnify and hold harmless the City, city council, commissions, boards, subcommittees and the City's elected and appointed officials, commissioners, board members, officers, agents, consultants and employees ("City Parties") from and against any and all liabilities, demands, claims, actions or proceedings and costs and expenses incidental thereto (including costs of defense, settlement and reasonable attorneys' fees), which any or all of them may suffer, incur, be responsible for or pay out as a result of or in connection with any challenge to the legality, validity or adequacy of any of the following items: (i) any prior or current agreements by and among the City and the Developer; (ii) the current, concurrent and subsequent permits, licenses and entitlements approved by the City; (iii) any environmental determination made by the City in connection with the Project Site and the Project; and (iv) any proceedings or other actions undertaken by the City in connection with the adoption or approval of any of the above. In the event of any administrative, legal, equitable action or other proceeding instituted by any third party (including without limitation a governmental entity or official) challenging the legality, validity or adequacy of any of the above items or any portion thereof, the Parties shall mutually cooperate with each other in defense of said action or proceeding. Notwithstanding the above, the City, at its sole option, may tender the complete defense of any third party challenge as described herein. In the event the City elects to contract with special counsel to provide for such a defense, the City shall meet and confer with the Developer regarding the selection of counsel, and the Developer shall pay all costs related to retention of such counsel by the City.
10. The site shall be developed in accordance with the approved plans on file in the Community Development Department - Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. Prior to any use of the project site or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Planning Official. (MC 9.14.020)
11. Any signs indicated on the submitted plans are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), require separate application and approval by the Planning Division. No signs are permitted in the public right of way. (MC 9.12)
12. All site plans, grading plans, landscape and irrigation plans, fence/wall plans, lighting plans and street improvement plans shall be coordinated for consistency with this approval.

## Special Conditions

13. The owner or owner's representative shall establish and maintain a relationship with
the City of Moreno Valley and cooperate with the Problem Oriented Policing (POP) program, or its successors.
14. Drive-through speaker system for the carwash shall not be detectable above daytime ambient noise levels beyond the property line boundaries, and shall not exceed fifty-five (55) dBA at any one time beyond the boundaries of the property line. (MC9.09.080 C. 6 and 9.10.140)
15. The use of the carwash and vacuum stations shall be limited to the operating hours of $8: 00 \mathrm{a} . \mathrm{m}$. and $10: 00 \mathrm{p} . \mathrm{m}$. The use of the carwash and vacuum stations shall be prohibited between 10:00 p.m. and 8:00 a.m.
16. The site has been approved for a Master Plot Plan (PEN22-0238) and Conditional Use Permit (PEN22-0176) for a commercial development comprised of an eight (8) island fueling station, six (6) vehicle charging stations, 7,400 square foot market, and a 1,790 square foot drive-thru carwash, including a state-of-the-art security system with alarms, surveillance cameras and security lighting, and the prohibition of alcohol beverage sales, on a 1.31-acre site. A change or modification shall require separate approval. For a Conditional Use Permit, violation may result in revocation of the Conditional Use Permit.
17. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security shall remain in place until the project is completed or the above conditions no longer exist. (Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard).
18. One outdoor trash receptacle shall be provided shall be provided for every ten (10) required parking spaces, with a minimum of one receptacle provided to be located front portion of the site for use by patrons. (MC 9.09.080 C 5.)
19. Prior to approval of any grading permit, the tree plan shall be submitted to and approved by the Panning Division. The plan shall identify all mature trees (4 inch trunk diameter or larger) on the subject property and City right-of-way. Using the grading plan as a base, the plan shall indicate trees to be relocated, retained, and removed. Replacement trees shall be shown on the plan, be a minimum size of 24 inch box, and meet a ratio of three replacement trees for each mature tree removed or as approved by the Planning Official. (GP Objective 4.4, 4.5, DG)

## Prior to Building Permit

20. Prior to issuance of any building permit, all Conditions of Approval, and Mitigation Measures shall be printed on the building plans.
21. Prior to the issuance of building permits, the developer shall provide documentation that contact was made to the U.S. Postal Service to determine the appropriate type and location of mailboxes.
22. Prior to issuance of any building permits, final landscaping and irrigation plans shall be submitted for review and approved by the Planning Division. After the third plan check review for landscape plans, an additional plan check fee shall apply. The plans shall be prepared in accordance with the City's Landscape Requirements and shall include:
a. A three (3) foot high decorative wall, solid hedge or berm shall be placed in any setback areas between a public right of way and a parking lot for screening.
b. Finger and end planters with required step outs and curbing shall be provided every 12 parking stalls as well as at the terminus of each aisle.
c. Drought tolerant landscape shall be used. Sod shall be limited to gathering areas. (or No sod shall be installed).
d. Street trees shall be provided every 40 feet on center in the right of way.
e. On-site trees shall be planted at an equivalent of one (1) tree per thirty (30) linear feet of the perimeter of a parking lot and per thirty linear feet of a building dimension for the portions of the building visible from a parking lot or right of way. Trees may be massed for pleasing aesthetic effects.
f. Enhanced landscaping shall be provided at all driveway entries and street corner locations The review of all utility boxes, transformers etc. shall be coordinated to provide adequate screening from public view.
g. Landscaping on three sides of any trash enclosure.
h. All site perimeter and parking lot landscape and irrigation shall be installed prior to the release of certificate of any occupancy permits for the site or pad in question (master plot plan). [only include items above that apply to the project].
23. Prior to issuance of building permits, the Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping. (GP Objective 43.30)
24. Prior to issuance of a building permit, the developer/property owner or developer's successor-in-interest shall pay all applicable impact fees due at permit issuance, including but not limited to Multi-species Habitat Conservation Plan (MSHCP) mitigation fees. (Ord)
25. Prior to building final, the developer/owner or developer's/owner's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), and the City's adopted Development Impact Fees. (Ord)
26. Prior to issuance of building permits, proposed covered trash enclosure(s) shall be included in the Planning review of the Fence and Wall plans. The trash enclosure (s), including the roof materials, shall be compatible with the architecture, color and materials of the building(s) design. Trash enclosure areas shall include landscaping on three sides unless located within the truck loading area. Approved design plans shall be included in a Building submittal (Fence and walls or building design plans). (GP Objective 43.6, DG)
27. At least thirty days prior to issuance of any grading permit, the developer shall retain a qualified archaeologist, provide a letter identifying the name and qualifications of the archaeologist to the Planning Division for approval, to monitor all ground disturbing activities in an effort to identify any unknown archaeological resources and to evaluate and recommend appropriate actions for any archaeological deposits exposed by construction activity.

At least thirty days prior to issuance of a grading permit, the applicant shall provide evidence that contact has been established with the appropriate Native American Tribe(s), providing notification of grading, excavation and the proposed monitoring program and to coordinate with the City and Tribe(s) to develop a cultural resources treatment and monitoring agreement. The agreement shall address treatment of known cultural resources, the designation, responsibilities and participation of Tribal monitors during grading, excavation and ground disturbing activities; project grading and development scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site.

A report documenting the proposed methodology for grading monitoring shall be submitted to and approved by the Planning Division prior to issuance of any grading permit. The monitoring archaeologist shall be empowered to stop and redirect grading in the vicinity of an exposed archaeological deposit until that deposit can be fully evaluated. The archaeologist shall consult with affected Tribe(s) to evaluate any archaeological resources discovered on the project site. Tribal monitors shall be allowed to monitor all grading, excavation and groundbreaking activities, and shall also have authority to stop and redirect grading activities in consultation with the project archaeologist.

The property owner shall relinquish ownership to the Tribe(s) of all Native American cultural resources, including sacred items, burial goods and all archaeological artifacts that are found on the project site for proper treatment and disposition. All sacred sites, should they be encountered with the project site, shall be avoided and preserved as the preferred mitigation.

If any inadvertent discoveries of subsurface archaeological or cultural resources occur during grading, the applicant, project archaeologist, and Tribe(s) shall assess
the significance of such resources and shall meet and confer regarding mitigation of such resources. Avoidance is the preferred method of preservation of archaeological resources. If the applicant, project archaeologist and Tribe(s) cannot agree on the significance or mitigation for such resources, the issue(s) will be presented to the Planning Official with adequate documentation. The Official shall make a determination based on the provisions of CEQA and consideration of the religious beliefs, customs and practices of the Tribe(s).
28. Prior to issuance of any grading permit, all Conditions of Approval, and Mitigation Measures shall be printed on the grading plans.
29. Prior to issuance of any grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project approval. No City permit or approval shall be issued until such fee is paid. (CEQA)
30. If potential historic, archaeological, Native American cultural resources or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area must cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be immediately submitted to the Planning Division for consideration, and implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered during grading and other construction excavation, no further disturbance shall occur until the County Coroner has made necessary findings as to origin. If the County Coroner determines that the remains are potentially Native American, the California Native American Heritage Commission shall be notified within 5-days of the published finding to be given a reasonable opportunity to identify the "most likely descendant." The "most likely descendant" shall then make recommendations, and engage in consultations concerning the treatment of the remains (California Public Resources Code 5097.98). (GP Objective 23.3, CEQA).
31. Prior to issuance of grading permits, the developer shall submit wall/fence plans to the Building and Safety Division for review and approval by the Planning Division as follows:
a. A maximum 6-foot high solid decorative block perimeter wall with pilasters and a cap shall be required adjacent to all residential zoned areas.
b. 3-foot high decorative wall, solid hedge, or berm shall be placed in any setback areas between a public right of way and a parking lot for screening.
c. Any proposed retaining walls shall also be decorative in nature, while the combination of retaining and other walls on top shall not exceed the height requirement.
d. Proposed screening walls for truck loading areas and required loading docks shall also include decorative block walls with pilasters with a height of up to fourteen (14) feet to fully screen trucks (industrial and some situations with commercial uses).
e. Walls and fences for visual screening are required when there are adjacent residential uses or residentially zone property. The height, placement, and design will be based on a site-specific review of the project. All walls are subject to the approval of the Planning Official. (MC 9.08.070) [select those that apply]
32. Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:
a. The name (if applicable) and address of the development.
b. The developer's name, address, and a 24-hour emergency telephone number.
33. Prior to issuance of grading permits, the location of the trash enclosure shall be included on the plans.
34. Prior to approval of any grading permit, the tree plan shall be submitted to and approved by the Planning Division. The plan shall identify all mature trees ( 4 inch trunk diameter or larger) on the subject property and City right-of-way. Using the grading plan as a base, the plan shall indicate trees to be relocated, retained, and removed. Replacement trees shall be shown on the plan, be a minimum size of 24 inch box, and meet a ratio of three replacement trees for each mature tree removed or as approved by the Planning Official. (GP Objective 4.4, 4.5, DG)

## Prior to Building Final or Occupancy

35. Prior to building final, all required landscaping and irrigation shall be installed per plan, certified by the Landscape Architect and inspected by the Planning Division. (MC 9.03.040, MC 9.17).
36. Prior to building final, Planning approved/stamped landscape plans shall be provided to the Community Development Department - Planning Division on a CD disk.
37. Prior to building final, all required and proposed fences and walls shall be constructed according to the approved plans on file in the Planning Division. (MC 9.080 .070 ).
38. Prior to building final or Certificate of Occupancy, the owner or owner's
representative shall provide documentation to the Planning Division that they have contacted the Moreno Valley Police Department to establish and maintain a relationship with the City of Moreno Valley Police Department and cooperate with the Problem Oriented Policing (POP) program, or its successors. [multi-family, night clubs, liquor stores]

## Building Division

39. The proposed non-residential project shall comply with the latest Federal Law, Americans with Disabilities Act, and State Law, California Code of Regulations, Title 24, Chapter 11B for accessibility standards for the disabled including access to the site, exits, bathrooms, work spaces, etc.
40. Prior to submittal, all new development, including residential second units, are required to obtain a valid property address prior to permit application. Addresses can be obtained by contacting the Building Safety Division at 951.413.3350.
41. Contact the Building Safety Division for permit application submittal requirements.
42. Any construction within the city shall only be completed between the hour of seven a.m. to seven p.m. Monday through Friday, excluding holidays and from eight a.m. to four p.m. on Saturday, unless written approval is obtained from the city building official or city engineer (Municipal Code Section 8.14.040.E).
43. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.
44. The proposed development is subject to the payment of applicable processing fees as required by the City's current Fee Ordinance at the time a building permit application is submitted or prior to the issuance of permits as determined by the City.
45. The proposed project will be subject to approval by the Eastern Municipal Water District and all applicable fees and charges shall be paid prior to permit issuance. Contact the water district at 951.928 .3777 for specific details.
46. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, accessibility, etc.
47. The proposed non-residential project shall comply with California Green Building Standards Code, Section 5.106.5.3, mandatory requirements for Electric Vehicle Charging Station (EVCS).
48. The proposed project's occupancy shall be classified by the Building Official and must comply with exiting, occupancy separation(s) and minimum plumbing fixture requirements. Minimum plumbing fixtures shall be provided per the California Plumbing Code, Table 422.1. The occupant load and occupancy classification shall be determined in accordance with the California Building Code.
49. Prior to permit issuance, every applicant shall submit a properly completed Waste Management Plan (WMP), as a portion of the building or demolition permit process. (MC 8.80.030)
50. The appropriation from local tax from construction contracts to the local jurisdiction of the specific construction job site is hereby required. This is accomplished by a contractor or subcontractor obtaining a construction site sub-permit for the job site. The contractors, or subcontracts, that have individual contracts with a value of $\$ 5$ million or more are subject to this condition.
The qualifying contract price applies to each contract or subcontract for work performed at the jobsite, and not to the total value of the prime contract. In order to obtain a jobsite sub-permit, the contractor or subcontractor must meet the following criteria:
a) have an active permit with the California Department of Tax and Fee Administration (CDTFA),
b) must be registered as a retailer, not consumer, of materials, and
c) have an executed contract over $\$ 5$ million to install materials at the jobsite.

The Prime Contractor will require that the subcontractors or other contractors exercise their option to obtain a California Department of Tax \& Fee Administration construction site sub-permit for the jobsite and allocate all eligible use tax payments to the City of Moreno Valley. Prior to any Notice to Proceed(s), the Prime Contractor shall provide the City of Moreno Valley Finance and Management Services Department with a list of subcontractors associated with the project along with a copy of their sub-permit that shows their CDTFA account number or a signed statement that sales and use tax does not apply to their portion of the project.

## FIRE DEPARTMENT

## Fire Prevention Bureau

51. All Fire Department access roads or driveways shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])
52. The Fire Department emergency vehicular access road shall be (all weather surface) capable of sustaining an imposed load of $80,000 \mathrm{lbs}$. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. The approved fire access road shall be in place during the time of construction. Temporary fire access roads shall be approved by the Fire Prevention Bureau. (CFC 501.4, and MV City Standard Engineering Plan 108d)
53. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft ( 0.3 m drop in 6 m ), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)
54. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4)
55. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (CFC 501.3)
56. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)
57. Prior to issuance of Certificate of Occupancy or Building Final, all commercial buildings shall display street numbers in a prominent location on the street side and rear access locations. The numerals shall be a minimum of twelve inches in height. (CFC 505.1, MVMC 8.36.060[I])
58. Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 507, 501.3) a - After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.
59. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in effect at the time of building plan submittal.
60. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.100)
61. The Fire Code Official is authorized to enforce the fire safety during construction requirements of Chapter 33. (CFC Chapter 33 \& CBC Chapter 33)
62. Fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty-four (24) feet and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])
63. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])
64. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.060, CFC 501.4)
65. Prior to issuance of a Certificate of Occupancy or Building Final, a "Knox Box Rapid Entry System" shall be provided. The Knox-Box shall be installed in an accessible location approved by the Fire Code Official. All exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)
66. The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the C.F.C., MVMC, and NFPA 24. Fire hydrants shall be located no closer than 40 feet to a building. A fire hydrant shall be located within 50 feet of the fire department connection for buildings protected with a fire sprinkler system. The size and number of outlets required for the approved fire hydrants are ( $6 " \times 4 " \times 21 / 2^{\prime \prime} \times 21 / 2 "$ ) (CFC 507.5.1, 507.5.7, Appendix C, NFPA 24-7.2.3, MVMC 912.2.1)
67. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)
68. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)
69. Plans for private water mains supplying fire sprinkler systems and/or private fire hydrants shall be submitted to the Fire Prevention Bureau for approval. (CFC 105 and CFC 3312.1)
70. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering said waterflow for 2 hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 507.3, Appendix B)
71. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5)
72. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall be responsible for obtaining underground and/or above ground tank permits for the storage of combustible liquids, flammable liquids, or any other hazardous materials from both the County of Riverside Community Health Agency Department of Environmental Health and the Fire Prevention Bureau. (CFC 105)
73. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall: a. Be signed by a registered civil engineer or a certified fire protection engineer; b. Contain a Fire Prevention Bureau approval signature block; and c. Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.
74. Prior to issuance of Certificate of Occupancy, approval shall be required from the County of Riverside Community Health Agency (Department of Environmental Health) and Moreno Valley Fire Prevention Bureau to maintain, store, use, handle materials, or conduct processes which produce conditions hazardous to life or property, and to install equipment used in connection with such activities. (CFC 105)

## FINANCIAL \& MANAGEMENT SERVICES DEPARTMENT

## Moreno Valley Utility

75. This project requires the installation of electric distribution facilities. A non-exclusive easement shall be provided to Moreno Valley Utility and shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.
76. This project requires the installation of electric distribution facilities. The developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer shall execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City all utility infrastructure including but not limited to, conduit, equipment, vaults, ducts, wires (including fiber optic cable), switches, conductors, transformers, and "bring-up" facilities including electrical capacity to serve the identified development and other adjoining, abutting, or benefiting projects as determined by Moreno Valley Utility - collectively referred to as "utility system" (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and/or delivery of any and all "utility services" to and within the project. For purposes of this condition, "utility services" shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar
services designated by the City Engineer. "Utility services" shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval.

The City, or the City's designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer's sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system.
77. Existing Moreno Valley Utility electrical infrastructure shall be preserved in place. The developer will be responsible, at developer's expense, for any and all costs associated with the relocation of any of Moreno Valley Utility's underground electrical distribution facilities, as determined by Moreno Valley Utility, which may be in conflict with any developer planned construction on the project site.
78. This project shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City fiber optic cable improvements consisting of fiber optic cable, splices and termination equipment to serve the identified development and other adjoining, abutting, or benefiting projects as determined by Moreno Valley Utility along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and/or delivery of any and all "fiber optic services" to and within the project.
79. This project shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to Moreno Valley Utility fiber optic cable improvements consisting of conduit, and pull boxes to serve the identified development and other adjoining, abutting, or benefiting projects as determined by Moreno Valley Utility along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and/or delivery of any and all "fiber optic services" to and within the project.
80. This project shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to Moreno Valley Utility electric streetlight improvements consisting of streetlight poles, mast-arms, fixtures conduit, wiring, terminations and pull boxes to serve the identified development and other adjoining, abutting, or benefiting projects as determined by the Land Development Department along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and/or delivery of any and all "street light services" to and within the project.

## PUBLIC WORKS DEPARTMENT

## Land Development

81. For non-subdivision projects, execution of a Public Improvement Agreement (PIA) and/or security (in the form of a cash deposit or other approved means) may be required as determined by the City Engineer. [MC 9.14.220]
82. Any work performed within public right-of-way requires an encroachment permit.
83. Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, shall be required prior to $90 \%$ security reduction or the end of the one-year warranty period of the public streets as approved by the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half ( 2 to $2 \frac{1}{2}$ ) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.
84. The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]
85. The final approved conditions of approval (COAs) and any applicable Mitigation Measures issued by the Planning Division shall be photographically or electronically placed on mylar sheets and included in the Grading and Street Improvement plans.
86. The developer shall monitor, supervise and control all construction related activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:
(a) Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.
(b) Observance of working hours as stipulated on permits issued by the Land Development Division.
(c) The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.
(d) All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.
Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.
87. Drainage facilities (e.g., catch basins, water quality basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.
88. In the event right-of-way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right-of-way in accordance with the Land Development

Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right-of-way or offsite easements and complete the improvements at such time the City acquires the right-of-way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right-of-way or easement acquisition. [GC 66462.5]
89. If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit. [MC 9.14.210(B)(C)]
90. The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]
91. The maintenance responsibility of the proposed storm drain line shall be clearly identified. Storm drain lines within private property will be privately maintained and those within public streets will be publicly maintained.
92. The proposed private storm drain system shall connect to the onsite proposed underground basin and then discharge offsite through an outlet at the northwest corner of the parcel.
93. This project shall submit civil engineering design plans, reports and/or documents (prepared by a registered/licensed civil engineer) for review and approval by the City Engineer per the current submittal requirements, prior to the indicated threshold or as required by the City Engineer. The submittal consists of, but is not limited to, the following:
a. Rough grading w/ erosion control plan (prior to grading permit issuance);
b. Precise grading w/ erosion control plan (prior to grading permit issuance);
c. Public improvement plan (e.g., street/storm drain with striping, sewer/water, etc.) (prior to encroachment permit issuance).
d. Final drainage study (prior to grading plan approval);
e. Final WQMP (prior to grading plan approval);
f. Easements, offers of dedication, etc. (prior to building permit issuance);
g. As-Built revision for all plans (prior to occupancy release).
94. Water quality best management practices (BMPs) designed to meet Water Quality Management Plan (WQMP) requirements for development shall not be used as a construction BMP. Water quality BMPs shall be maintained for the entire duration of the project construction and be used to treat runoff from those developed portions of the project. Water quality BMPs shall be protected from upstream construction related runoff by having proper best management practices in place and maintained. Water quality BMPs shall be graded per the approved design plans and once landscaping and irrigation has been installed, it and its maintenance shall
be turned over to the private owner association (POA) or responsible party for maintenance.

## Prior to Grading Plan Approval

95. Resolution of all drainage issues shall be as approved by the City Engineer.
96. A final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include, but not be limited to: existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. The study shall analyze 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.
97. Emergency overflow areas shall be shown at all applicable drainage improvement locations in the event that the drainage improvement fails or exceeds full capacity.
98. A final project-specific Water Quality Management Plan (WQMP) shall be submitted for review and approved by the City Engineer, which:
a. Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;
b. Incorporates Source Control BMPs and provides a detailed description of their implementation;
c. Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and
d. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.
A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division. A digital (pdf) copy of the approved final project-specific Water Quality Management Plan (WQMP) shall be submitted to the Land Development Division.
99. The final project-specific Water Quality Management Plan (WQMP) shall be consistent with the approved P-WQMP, as well as in full conformance with the document: "Water Quality Management Plan - A Guidance Document for the Santa Ana Region of Riverside County" dated October 22, 2012. The F-WQMP shall be submitted and approved prior to application for and issuance of grading permits. At a minimum, the F-WQMP shall include the following: Site Design BMPs; Source Control BMPs, Treatment Control BMPs, Operation and Maintenance requirements for BMPs and sources of funding for BMP implementation.
a. The Applicant has proposed to incorporate the use of underground infiltration chambers, inlet filter inserts, and vegetated swale. Final design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance document.
b. The Applicant shall substantiate the applicable Hydrologic Condition of

Concerns (HCOC) in Section F of the F-WQMP. The HCOC designates that the project will be exempt from mitigation requirements based on Exemption 3.
c. All proposed LID BMP's shall be designed in accordance with the RCFC\&WCD's Design Handbook for Low Impact Development Best Management Practices, dated September 2011.
d. The proposed LID BMP's as identified in the project-specific P-WQMP shall be incorporated into the Final WQMP.
e. The NPDES notes per City Standard Drawing No. MVFE-350-0 shall be included in the grading plans.
f. Post-construction treatment control BMPs, once placed into operation for post-construction water quality control, shall not be used to treat runoff from construction sites or unstabilized areas of the site.
g. Prior to precise grading plan approval, the grading plan shall show any proposed trash enclosure to include a cover (roof) and sufficient size for dual bin (1 for trash and 1 for recyclables). The architecture shall be approved by the Planning Division and any structural approvals shall be made by the Building and Safety Division.
100. The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:
a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.
b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.
c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.
d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.
101. Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
102. The developer shall select Low Impact Development (LID) Best Management Practices (BMPs) designed per the latest version of the Water Quality Management Plan (WQMP) - a guidance document for the Santa Ana region of Riverside County.
103. The developer shall submit recorded slope easements from adjacent property owners in all areas where grading resulting in slopes is proposed to take place outside of the project boundaries. For all other offsite grading, written permission from adjacent property owners shall be submitted.
104. A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General

Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.
105. Any proposed trash enclosure shall include a solid cover (roof) and sufficient size for dual bin (one for trash and one for recyclables). The architecture shall be approved by the Planning Division and any structural approvals shall be made by the Building \& Safety Division.
106. For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID\#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

## Prior to Grading Permit

107. A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]
108. For non-subdivision projects, a copy of the Covenants, Conditions and Restrictions (CC\&Rs) shall be submitted for review by the City Engineer. The CC\&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project.
109. If the developer chooses to construct the project in phases, a Construction Phasing Plan for the construction of on-site public or private improvements shall be submitted for review and approved by the City Engineer.
110. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]
111. Security, in the form of a cash deposit (preferable), bond or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]

## Prior to Improvement Plan Approval

112. The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless otherwise approved by the City Engineer.
113. The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.
114. The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.
115. Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.
116. The hydrology study shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of current City standards shall apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the City Engineer. [MC 9.14.110 A.2]
117. All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
118. Any missing or deficient existing improvements along the project frontage shall be constructed or secured for construction. The City Engineer may require the ultimate structural section for pavement to half-street width plus 18 feet or provide core test results confirming that existing pavement section is per current City Standards; additional signing \& striping to accommodate increased traffic imposed by the development, etc.
119. For non-subdivision projects, all street dedications shall be free of encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.
120. The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts may be allowed for emergency repairs or as specifically approved in writing by the City Engineer. Special requirements shall be imposed for repaving, limits to be determined by the City Engineer.
121. All dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.
122. Prior to improvement plan approval, pavement core samples of existing pavement shall be taken and findings submitted to the City for review and consideration of pavement improvements. The City will determine the adequacy of the existing pavement structural section. If the existing pavement structural section is found to be adequate, the developer may still be required to perform a 2 inch grind and
overlay or slurry seal, depending on the severity of existing pavement cracking, as required by the City Engineer. If the existing pavement section is found to be inadequate, the Developer shall replace the pavement to meet or exceed the City's pavement structural section standard.

## Prior to Building Permit

123. An engineered-fill certification, rough grade certification and compaction report shall be submitted for review and approved by the City Engineer. A digital (pdf) copy of the approved compaction report shall be submitted to the Land Development Division. All pads shall meet pad elevations per approved grading plans as noted by the setting of "blue-top" markers installed by a registered land surveyor or licensed civil engineer.
124. For non-subdivision projects, all street dedications shall be free of encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.
125. A walk through with a Land Development Inspector shall be scheduled to inspect existing improvements within public right of way along project frontage. Any missing, damaged or substandard improvements including ADA access ramps that do not meet current City standards shall be required to be installed, replaced and/or repaired. The applicant shall post security to cover the cost of the repairs and complete the repairs within the time allowed in the public improvement agreement used to secure the improvements.
126. Certification to the line, grade, flow test and system invert elevations for the water quality control BMPs shall be submitted for review and approved by the City Engineer.
127. All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.
128. The final/precise grade certification shall be submitted for review and approved by the City Engineer.
129. The developer shall complete all public improvements in conformance with current City standards, except as noted in the Special Conditions, including but not limited to the following:
a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights (MVU: SL-2), signing, striping, landscaping and irrigation, medians, and traffic control devices as appropriate.
b. Storm drain facilities including, but not limited to: storm drain pipe and storm drain laterals.
c. City-owned utilities.
d. Sewer and water systems including, but not limited to: sanitary sewer, potable water, and recycled water.
130. For commercial, industrial and multi-family projects, a "Stormwater Treatment Device and Control Measure Access and Maintenance Covenant", "Maintenance Agreement for Water Quality Improvements located in the public right-of-way" and a "Declaration of Restrictive Covenants (encroachment on City easement)" shall be recorded to provide public notice of the maintenance requirements to be implemented per the approved final project-specific WQMP. A boilerplate copy of the covenants and agreements can be obtained by contacting the Land Development Division.
131. The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:
a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).
b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.
132. The Developer shall comply with the following water quality related items:
a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.
b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;
c. Demonstrate that Developer is prepared to implement all non-structural BMPs described in the approved final project-specific WQMP; and
d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.
e. Clean and repair the water quality BMP's, including re-grading to approved civil drawing if necessary.
f. Obtain approval and complete installation of the irrigation and landscaping.
133. Prior to building permit issuance, the developer shall dedicate the following right of way to accommodate the required improvements:
(a) The necessary street right of way dedication on the west side of Oliver Street (88' R/W / 64' CC: Minor Arterial, City Standard No. MVSI-105A-2) along the project frontage.
(b) The necessary street right of way dedication on the north side of Iris Avenue (134' R/W / 110’ CC: Divided Major Arterial, City Standard No. MVSI-101A-1) for transition, alignment, and/or drainage purposes.
(c) A 4 foot minimum pedestrian right of way dedication behind any driveway approach per City Standard No. MVSI-112C-0, as applicable.
(d) Corner cutback right of way dedication per City Standard No. MVSI-165-0 on all intersecting public streets, as directed by the City Engineer.
134. Prior to occupancy, the following improvements shall be completed:

Oliver Street (88' R/W / 64' CC: Minor Arterial, City Standard No. MVSI-105A-2) shall be constructed to achieve a half-width of 32 ' plus 18' beyond centerline, along
the entire project's east frontage. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, any necessary offsite joins to existing, pedestrian ramps, and dry and wet utilities. Any missing or deficient improvements along the project's east frontage shall be constructed.
Prior to improvement plan approval, the developer shall provide to the City Engineer the results of coring tests confirming that said existing pavement section has been constructed per City Standard No. MVSI-105A-2.
135. Prior to occupancy, the following improvements shall be completed:

Iris Avenue (134' R/W / 110' CC: Divided Major Arterial, City Standard No. MVSI-101A-1) shall be constructed to achieve a half-width of 55 ' along the entire project's south frontage. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, any necessary offsite joins to existing, street lights, pedestrian ramps, and dry and wet utilities. Any missing or deficient improvements along the project's south frontage shall be constructed.
Prior to improvement plan approval, the developer shall provide to the City Engineer the results of coring tests confirming that said existing pavement section has been constructed per City Standard No. MVSI-101A-1. Any missing or deficient improvements along the project's south frontage shall be constructed prior to issuance of a certificate of occupancy.

## Special Districts Division

136. Street Light Coordination/Advanced Energy Fees. Prior to the issuance of the 1st Building Permit for this project, the Developer shall pay New Street Light Installation Fees for all street lights required to be installed for this development. Payment will be collected by the Land Development Division. Fees are based on the street light administration/coordination and advanced energy fees as set forth in the City Fees, Charges, and Rates as adopted by City Council and effective at the time of payment. Any change in the project which increases the number of street lights to be installed requires payment of the fees at the then current fee. Questions may be directed to the Special Districts Administration at 951.413.3470 or SDAdmin@moval.org.
137. CFD 2014-01. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee, form an association to fund the services or fund an endowment) to provide an ongoing funding source for Street Lighting Services for capital improvements.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or
formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

Alternatively, the condition can be satisfied by the Developer forming a property owner association that will be responsible for the improvements and any and all operation and maintenance costs for the improvements o
138. Major Infrastructure SFD Major Infrastructure Financing District. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for the construction and maintenance of major infrastructure improvements, which may include but is not limited to thoroughfares, bridges, and certain flood control improvements. This condition will be applicable provided said district is under development at the time this project applies for the 1st Building Permit. This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings. An alternative to satisfying this condition will be identified at such time as a special
139. Park Maintenance Funding. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or fund an endowment) to provide an ongoing funding source for the continued maintenance, enhancement, and/or retrofit of parks, open spaces, linear parks, and/or trails systems.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the
project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

Alternatively, the condition can be satisfied by the Developer funding an endowment in an amount sufficient to yield an annual revenue stream that meets the annual obligation, as calculated by Special Districts Admin staff. The Developer must contact Special Districts Administration at 951.413.3470 or at SDAdmin@moval.org to satisfy this condition.
140. Maintenance Services Funding. Prior to applying for the 1 st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for the operation and maintenance of public improvements and/or services associated with impacts of the development. This condition will only be applicable provided said district is under development at the time this project applies for the 1st Building Permit.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

An alternative to satisfying this funding source will be identified at such time as a special financing district has been established. At the time of development, the developer must
141. Public Safety Funding. Prior to applying for the 1st Building Permit, the qualified elector (e.g. property owner) must initiate the process (i.e. pay the annexation fee or use the alternative identified at the time of the special financing district formation) to provide an ongoing funding source for Public Safety services, which may include but is not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and

Animal Control services. This condition will only be applicable provided said district is under development at the time this project applies for the 1st Building Permit.

This condition must be fully satisfied prior to issuance of the 1st Certificate of Occupancy. This condition will be satisfied with the successful annexation/formation (i.e. special election process) into a special financing district and payment of all costs associated with the special election process. Annexation into a special financing district requires an annual payment of the annual special tax, assessment, or fee levied against the property tax bill, or other lawful means, of the parcels of the project for such district. At the time of the public hearing to consider annexation into or formation of the district, the qualified elector(s) will not protest the annexation or formation, but will retain the right to object to any eventual tax/assessment/fee that is not equitable should the financial burden of the tax/assessment/fee not be reasonably proportionate to the benefit the affected property receives from the improvements to be installed and/or maintained or services provided. The special election requires a minimum 90-day process in compliance with the provisions of Article 13C of the California Constitution, Proposition 218, or other applicable legislation, and consistent with the scheduling for City Council meetings.

An alternative to satisfying this condition will be identified at such time as a special financing district has been established. At the time of dev
142. Maintenance Responsibility. The ongoing maintenance of any landscaping required to be installed behind the curb shall be the responsibility of the property owner.
143. Damage. Any damage to existing landscape areas maintained by the City of Moreno Valley due to project construction shall be repaired/replaced by the Developer, or Developer's successors in interest, at no cost to the City of Moreno Valley.
144. The existing parkway behind the curb will no longer be maintained by the City and will become the responsibility of the property owner. Please coordinate abandonment of existing City irrigation system with Landscape Services at 951-413-3480.
145. The ongoing maintenance of any water quality BMP (e.g. Bioswale) constructed in the public right of way shall be the responsibility of a property owner association or the property owner.

## Transportation Engineering Division

146. Conditions of approval may be modified or added if a phasing plan is submitted for this development.
147. Project driveways shall conform to City of Moreno Valley Standard Plans No. MVSI-112C-0 for Commercial Driveway Approaches. Access at the project driveways shall be as follows:

- Iris Avenue: Right-Turn In/Out Only (Shared Access)
- Oliver Street: Right-Turn In/Out Only

148. Iris Avenue is classified as a Divided Major Arterial (134'RW/110'CC) per City Standard Plan No. MVSI-101A-1. Any improvement undertaken by this project shall be in conformance with City standards. Communication conduit shall be installed per City Standard Plan No. MVSI-186-0.
149. Oliver Street is classified as a Minor Arterial per City Standard Plan No. MVSI-105A-2. Any improvements undertaken by this project shall be in conformance with City standards.
150. Prior to final approval of any landscaping or monument sign plans, the project plans shall demonstrate that sight distance at the project driveways conforms to City Standard Plan No. MVSI-164A, B, C-0.
151. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets within the project area.
152. Prior to the final approval of the street improvement plans, a bus turnout in the westbound direction along Iris Avenue, west of Oliver Street shall be designed per City Standard Plan No. MVSI-161-0. The bus turnout shall be designed to serve as a combination right turn lane/bus bay to the satisfaction of the City Engineer.
153. Prior to the final approval of the street improvement plans, the existing landscaped median on Iris Avenue along the project frontage shall be designed to extend the existing eastbound left-turn lane storage length to a minimum of 285 feet at the Iris Avenue/Oliver Street intersection. Median construction shall include but is not limited to, paving, concrete curbs, landscape, and signs. Exact requirements will be determined during the plan check process.
154. Prior to issuance of a certificate of occupancy, all approved street improvements including the median and bus turnout improvements shall be installed to the satisfaction of the City Engineer.
155. Driveway on Iris Avenue shall be shared driveway and shall be designed to the satisfaction of the City Engineer. An irrevocable shared access agreement shall be provided for APNs 486-310-039, 486-310-041, and 486-310-042 and shall be provided prior to issuance of a building permit.

## PLANNING COMMISSION

## STAFF REPORT

Meeting Date: November 9, 2023
A PROPOSAL FOR THE DEVELOPMENT AND OPERATION OF AN ISLAND FUELING STATION, VEHICLE CHARGING STATIONS, CONVENIENCE STORE (BEYOND FOOD MART), AND DRIVE-THRU CARWASH

Case:

Applicant:
Property Owner: Tabel Center, LLC
Representative: Michael Ramirez
Project Site:

Case Planner: Oliver Mujica, Contract Planner
Council District: 4
Proposal:

CEQA:
Master Plot Plan (PEN22-0238)
Conditional Use Permit (PEN22-0176)
Beyond Food Mart, Inc.

Northwest corner of Iris Avenue and Oliver Street (APN: 486-310-038) and a drive-thru carwash.

The Applicant is requesting the approval of a 1.31 -acre Energy Center comprised of an eight (8) island fueling station, six (6) vehicle charging stations, a convenience store,

Adopt Initial Study/Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program.

## SUMMARY

Beyond Food Mart, Inc. ("Applicant") submitted applications for a Master Plot Plan (PEN22-0238) for a 1.31-acre commercial development and a Conditional Use Permit (PEN22-0176) for the operation of an eight (8) island fueling station, six (6) vehicle charging stations, 7,400 square foot convenience store, and drive-thru carwash, along with the associated landscaping, and on-site and off-site improvements. The proposed
development is located on the northwest corner of the intersection of Iris Avenue and Oliver Street (APN: 486-310-038) within the Downtown Center (DC) District (collectively, the "Proposed Project"). The Proposed Project, as designed and conditioned, is consistent with the goals, policies, and objectives of the City's General Plan and the requirements of the Downtown Center (DC) District and the City's Municipal Code.

## PROJECT DESCRIPTION

## Proposed Project

## Master Plot Plan

The Proposed Project consists of a Master Plot Plan for the development of the 1.31acre commercial site with eight (8) island fueling stations, six (6) vehicle charging stations, a 7,400 square foot convenience store, and a drive-thru carwash, along with the associated landscaping, and on-site and off-site improvements.

## Conditional Use Permit

Pursuant to the requirements of Section 9.02.060 (Conditional Use Permits) of the City's Planning and Zoning Code, approval of an auto service station with accessory uses including vehicle charging stations, convenience store, and drive-thru carwash located within 300 feet from a residential zone or use is permitted within the subject Downtown Center (DC) District subject to the approval of a Conditional Use Permit.

The proposed Beyond Food Mart project operation as an eight (8) island fueling station, six (6) vehicle charging stations, convenience store, and drive-thru carwash is consistent with and in compliance with the development standards, requirements, and regulations of the Municipal Code for a Conditional Use Permit, as well as the goals, policies, and objectives of the City's General Plan.

With the exception of the proposed drive-thru carwash, the proposed Beyond Food Mart project facilities will be open seven (7) days per week and twenty-four (24) hours per day. At this time, there will be a total of twelve (12) employees covering three (3) shifts with a minimum of three (3) employees per shift. Beyond Food Mart utilizes a state-of-the-art security system with alarms, surveillance cameras, and security lighting for security purposes. Additionally, the employees are trained and directed so that the property is walked hourly to ensure cleanliness and safety. The operating hours of the drive-thru carwash and vacuum stations will be from 8:00 a.m. to 10:00 p.m.

## Site and Surrounding Area

The Project Site is currently vacant and unimproved. The parcels directly to the north and west of the Project Site are within the Downtown Center (DC) District and are currently vacant and unimproved. The parcels to the east of the Project Site across Oliver Street are within 300 feet and developed with single-family residences within the Residential Medium Low (ML) District of the Moreno Valley Ranch Specific Plan (SP193). The parcels south of the Project Site across Iris Avenue are also within 300
feet and developed with single-family residences within the Residential Medium Low (ML) District of the Moreno Valley Ranch Specific Plan (SP193). The existing Kaiser Permanente Moreno Valley Medical Center is approximately 400 feet west of the Project Site.

## Access/Parking

The proposed Beyond Food Mart project provides direct access via two (2) primary entrances/exits, one (1) located along Iris Avenue and another on Oliver Street. Both driveways are restricted to "right-turn in" and "right-turn out" movements for public safety purposes. The internal site circulation has been designed to adequately accommodate on-site vehicular circulation including access to the island fueling stations, vehicle charging stations, convenience store, and drive-thru carwash tunnel and vacuum stations. Additionally, the carwash drive-thru lane has been designed to provide adequate stacking for the proposed use, not to impede internal vehicular circulation.

The Proposed Project provides 48 off-street parking spaces in compliance with Section 9.11.040 (Off-Street Parking Requirements) of the City's Planning and Zoning Code.

## Design/Landscaping

The architectural design is modern with varied rooflines and projections incorporated into the façade and varying paint colors and façade material schemes to create visual interest in the structures. Incorporating articulated wall surfaces and features, as well as the island fueling station canopy design, will enhance the visual aesthetics at this intersection.

The proposed landscaping plan provides for on-site landscaping along the perimeter of the Project Site. A combination of small and large trees, various shrubs, and ground cover will be utilized on the corner of the subject site along Iris Avenue and Oliver Street to enhance the Project Site and create pedestrian-friendly features.

As designed, the proposed Beyond Food Mart project conforms to the development standards of the Downtown Center (DC) District, the City's Landscaping Standards, and the design guidelines for commercial developments prescribed in the City's Municipal Code.

## REVIEW PROCESS

As part of the standard review process, all appropriate outside agencies have considered the Proposed Project. The Proposed Project was reviewed by the Project Review Staff Committee as required by the Municipal Code. Following subsequent revisions and staff review, the project was deemed complete.

## ENVIRONMENTAL

An Initial Study was prepared by EPD Solutions, Inc. and accepted by the Planning Division Staff in compliance with the requirements of the California Environmental Quality Act (CEQA) and its guidelines. The Initial Study examined the potential impacts of the proposed project on the environment. The Initial Study/ Mitigated Negative Declaration (IS/MND) serves as the appropriate CEQA documentation for the Proposed Project. With the implementation of the proposed mitigation measures, the Proposed Project will not have a significant effect on the environment. Technical studies prepared in support of the IS/MND include the following: Air Quality Analysis (CalEEMod 2022 Outputs); Health Risk Assessment; Biological Resources Assessment; Cultural Resources Assessment; Phase I Environmental Site Assessment; Preliminary Hydrology Report; Preliminary Water Quality Management Plan; Noise Impact Study; Traffic Impact Analysis; and Vehicle Miles Traveled Screening Analysis. Copies of the appendices to the IS/MND can be accessed from the link attached to this staff report. The documents can be reviewed at City Hall during operating hours, and online on the City's website.

Mitigation measures are recommended for the Proposed Project in the following areas: Air Quality, Biological Resources, and Tribal and Cultural Resources, all of which are incorporated into the Mitigation Monitoring and Report Program (MMRP). The cultural resources measures are intended to ensure that potential resources that might be discovered are protected. However, these measures are not required to address a known significant impact. Based on the Initial Study and with the implementation of the proposed mitigation measures, the Proposed Project will not cause any significant impacts to the environment.

The public comment period for the Notice of Availability of the Initial Study/Mitigated Negative Declaration began on October 13, 2023, and ended on November 2, 2023, (State Clearing House Number 2023100360) which satisfies the required 30-day review period required for this project. As of the preparation of this staff report, no comments have been received. Written comments received after the preparation of this staff report will be provided at the public hearing.

## NOTIFICATION

Consistent with the City Municipal Code provisions and applicable law, public notice was sent to all property owners of record within 600 feet of the Project Site, posted on the Project Site, and published in the Press Enterprise Newspaper. Public comments received prior to publication of the report have been attached to this report.

## REVIEW AGENCY COMMENTS

Staff has coordinated with outside agencies where applicable, as is the standard review process for these development applications.

## STAFF RECOMMENDATION

Staff recommends that the Planning Commission take the following actions:
A. ADOPT Resolution No. 2023-47, attached hereto, and thereby:

1. ADOPTING the Initial Study/Mitigated Negative Declaration prepared for Master Plot Plan (PEN22-0238) and Conditional Use Permit (PEN22-0176) on file with the Community Development Department, incorporated herein by this reference, which was completed in compliance with CEQA and the CEQA Guidelines, and reflects that the Planning Commission reviewed and considered the information contained in the Initial Study/Mitigated Negative Declaration, and exercised its independent judgment and analysis of the Proposed Project's potential environmental impacts; and
2. ADOPTING the Mitigation Monitoring and Reporting Program prepared for the Proposed Project, which consists of a Master Plot Plan (PEN22-0238) and Conditional Use Permit (PEN22-0176) pursuant to CEQA and the CEQA Guidelines.
B. ADOPT Resolution No. 2023-48, attached hereto, and thereby:
3. APPROVING Master Plot Plan (PEN22-0238) and Conditional Use Permit (PEN22-0176) based on the recitals, evidence contained in the administrative records, and findings as set forth in Resolution No. 2023-48.

Prepared by:
Oliver Mujica
Consultant

## Community Development Department Planning Division

## MEMORANDUM

To: Honorable Chair DeJohnette and Members of the Planning Commission
From: Oliver Mujica, Contract Planner
Date: November 09, 2023
Subject: Public Hearing Item \# 1 (Master Plot Plan (PEN22-0238) CUP (PEN22-0176))

After the publication of the agenda, City staff received the attached Public Comments.

# RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT 

November 1, 2023
City of Moreno Valley
Community Development Department Planning Division
Post Office Box 88005
Moreno Valley, CA 92552-0805
Attention: Oliver Mujica
Re: PEN 22-0238, PEN 22-0176 and
APN 486-310-038
The Riverside County Flood Control and Water Conservation District (District) does not normally recommend conditions for land divisions or other land use cases in incorporated cities. The District also does not plan check City land use cases or provide State Division of Real Estate letters or other flood hazard reports for such cases. District comments/recommendations for such cases are normally limited to items of specific interest to the District including District Master Drainage Plan facilities, other regional flood control and drainage facilities which could be considered a logical component or extension of a master plan system, and District Area Drainage Plan fees (development mitigation fees). In addition, information of a general nature is provided.

The District's review is based on the above-referenced project transmittal, received October 18, 2023. The District has not reviewed the proposed project in detail, and the following comments do not in any way constitute or imply District approval or endorsement of the proposed project with respect to flood hazard, public health and safety, or any other such issue:

This project would not be impacted by District Master Drainage Plan facilities, nor are other facilities of regional interest proposed.

This project involves District proposed Master Drainage Plan facilities, namely, $\qquad$ . The District will accept ownership of such facilities on written request by the City. The Project Applicant shall enter into a cooperative agreement establishing the terms and conditions of inspection, operation, and maintenance with the District and any other maintenance partners. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection, and administrative fees will be required. All regulatory permits (and all documents pertaining thereto, e.g., Habitat Mitigation and Monitoring Plans, Conservation Plans/Easements) that are to be secured by the Applicant for both facility construction and maintenance shall be submitted to the District for review. The regulatory permits' terms and conditions shall be approved by the District prior to improvement plan approval, map recordation, or finalization of the regulatory permits. There shall be no unreasonable constraint upon the District's ability to operate and maintain the flood control facility(ies) to protect public health and safety.

If this project proposes channels, storm drains larger than 36 inches in diameter, or other facilities that could be considered regional in nature and/or a logical extension a District's facility, the District would consider accepting ownership of such facilities on written request by the City. The Project Applicant shall enter into a cooperative agreement establishing the terms and conditions of inspection, operation, and maintenance with the District and any other maintenance partners. Facilities must be constructed to District standards, and District plan check and inspection will be required for District acceptance. Plan check, inspection, and administrative fees will be required. The regulatory permits' terms and conditions shall be approved by the District prior to improvement plan approval, map recordation, or
finalization of the regulatory permits. There shall be no unreasonable constraint upon the District's ability to operate and maintain the flood control facility(ies) to protect public health and safety.

- This project is located within the limits of the District's Moreno Area Drainage Plan for which drainage fees have been adopted; applicable fees should be paid by cashier's check or money order only to the Flood Control District or City prior to issuance of grading permits. Fees to be paid should be at the rate in effect at the time of issuance of the actual permit.

An encroachment permit shall be obtained for any construction related activities occurring within District right of way or facilities, namely, $\qquad$ . If a proposed storm drain connection exceeds the hydraulic performance of the existing drainage facilities, mitigation will be required. For further information, contact the District's Encroachment Permit Section at 951.955.1266.
$\square \quad$ The District's previous comments are still valid.

## GENERAL INFORMATION

This project may require a National Pollutant Discharge Elimination System (NPDES) permit from the State Water Resources Control Board. Clearance for grading, recordation or other final approval should not be given until the City has determined that the project has been granted a permit or is shown to be exempt.

If this project involves a Federal Emergency Management Agency (FEMA) mapped floodplain, then the City should require the applicant to provide all studies, calculations, plans and other information required to meet FEMA requirements, and should further require that the applicant obtain a Conditional Letter of Map Revision (CLOMR) prior to grading, recordation or other final approval of the project, and a Letter of Map Revision (LOMR) prior to occupancy.

The project proponent shall bear the responsibility for complying with all applicable mitigation measures defined in the California Environmental Quality Act (CEQA) document (i.e., Negative Declaration, Mitigated Negative Declaration, Environmental Impact Report) and/or Mitigation Monitoring and Reporting Program, if a CEQA document was prepared for the project. The project proponent shall also bear the responsibility for complying with all other federal, state, and local environmental rules and regulations that may apply.

If a natural watercourse or mapped floodplain is impacted by this project, the City should require the applicant to obtain a Section 1602 Agreement from the California Department of Fish and Wildlife and a Clean Water Act Section 404 Permit from the U.S. Army Corps of Engineers, or written correspondence from these agencies indicating the project is exempt from these requirements. A Clean Water Act Section 401 Water Quality Certification may be required from the local California Regional Water Quality Control Board prior to issuance of the Corps 404 permit.

Very truly yours,

EM:mm

Warning: External Email - Watch for Email Red Flags!

## To: Oliver Mujica

From: John \& Laura Stanton
Regarding the proposal for a gas station on the northwest corner of Iris and Oliver, we say absolutely NOI There is already construction underway on the southwest corner, which is already creating problems. We already have gas stations nearby that are more than sufficient for the needs of the neighborhood. With the proposed new neighborhood being build on Nasson north of Iris, the traffic is going to get far heavier and worse than it already is. We DO NOI need the additional noise, even heavier traffic and the potential for the unwanted transient population to invade our community. So far we have been able to maintain a nice, quiet community, keeping the sirens at a distance. Do not invite crime and criminals into our neighborhood.

Respectfully,
John \& Laura Stanton

Site Plan / Project Concerns

## 1 - Right Turns (staff packet pg192 \& 193)

The site plan and staff report state there is a "RIRO" (Right In / Right Out) on Oliver Street. Currently there is no center median to prevent "LILO" (Left In / Left Out) from the proposed project. Henceforth customers will be making left turns in and out. With no stripped median to allow customers to safely exit the travel lane and wait to turn they will be either be waiting in the lane of travel to turn left which will impact traffic traveling northbound on Oliver. This turning action can cause and accident for someone not paying attention to the person making a left turn into the location.

In order to help eliminate the possibility of "LILO's" I would encourage this commission to have the applicant add a "pork chop" which will then force traffic to reconsider their attempts to turn left into the location. It will not prevent $100 \%$, but the added raised pork chop will definitely help discourage LILO's into and out of the location. The cost is minimal and can be achieved easily.

## 2 - Design / Landscaping

The applicant should be required to utilize drought tolerant landscaping (desertscape) if possible and/or minimize the use of grass by adding more bark or desert gravel.

The applicant should be encouraged to utilize the earth tone range of colors which are consistent with the surrounding homes. The color pallet the applicant proposes is very bold and loud and will not be consistent with either the new addition to the Kaiser Hospital or surrounding community and local elementary schools.

Staff adds that trees which are being planted shall be 24 inch box size. These types of trees are actually very small in nature and the guide sticks which are used to
hold up the trees end up being bigger than the actual tree. Planning Commission should recommend the applicant to plant 60 inch box size trees. Planting a 24 -inch box tree is in actuality only planting a 15 gallon tree in a 24 inch box. Nurseries do this so that the roots can grow. So, naturally the trees will always be one size smaller than what is told. Example, a 36 -inch box is actually a 24 , a 48 -inch box is actually a 36 inch and so on.

## 3 -Notification

I believe the applicant should have done more than the "standard" city requirement of 600 feet. Although the applicant is not required to do so, it would have shown this commission and the neighborhoods adjacent that the applicant chose to go "above and beyond" city standards to ensure that the project would be a good neighbor to the residents in the area.

The standard mailing only provides 10 -day notice. The $4 \times 8$ posting on site can only be seen if you stop, exit your vehicle and go up to the sign to read it. The applicant DID NOT reach out to the community to hold community meetings with local residents or send a special mailer stating his project was coming forward (that I am aware of). Although this is not a city planning requirement, the applicant once again, could have shown their willingness to be a good neighbor by going above and beyond.

The applicant who is not a resident next to this location failed to take an extra step to ensure the community was aware. The local residents are good enough to be customers, but not be noticed? The applicant should have done more to be a good neighbor.

## 4 - Riverside Transit Agency (RTA) (staff packet pg193)

Currently there is a bus stop in front of the location. It is served by Route \#20. Applicant has proposed keeping the stop in the same location. This will require the bus to stop inside of the deceleration lane to pick up riders. But for customers who wish to enter the location, this will cause a safety concern, again causing
another point of conflict for both bus riders and drivers alike. The stop should either be moved to the west on the west side of the entrance to the project so as to not impact the customers who need to use the deceleration lane to enter the project and reducing yet another point of conflict for traffic.

Furthermore, there is another RTA stop approximately 300 feet to the west in front of Kaiser Hospital. Perhaps the applicant should contact RTA directly to see about removing the stop altogether? The second stop has an actual bus shelter which provides more security to ridership and shields them from the elements more than the actual bench at the current location.

Keeping the current stop and forcing the RTA bus to stop inside of the deceleration lane causes a point of conflict that I am sure the traffic department would like to alleviate. City Attorney might want to opine if the city would be liable for any damages should the planning commission approve such a hazard after knowingly being made aware of such an issue.

## 5-Community Services

Applicant's project should be annexed into the local Community Facilities District (CFD). As mentioned in the staff report (page 190 \& 191) "the condition can be satisfied by the Developer funding an endowment in an amount sufficient to yield an annual revenue stream that meets the annual obligation"

For years city staff have stated that the local CFD is deficient in funds to perform annual maintenance to the center landscaped medians and parkways. The applicant should be conditioned to join the CFD and provide a "one time" community benefit to help ensure the CFD is on good financial footing. A one-time community benefit in the amount of $\$ 50,000$ would go a long way in helping to maintain the local landscaping in and around the project which will undoubtedly add additional trash and illegal dumping to the community.

## 6 - Truck Deliveries (reference site plan)

The applicant chooses to utilize "doubles" for its truck fuel deliveries. Applicant should use the standard truck turning template to measure turning radius and
access to/from location. Applicants CANNOT guarantee their fuel deliveries will come in on a "doubles truck".

Applicant and Planning Commission should assume worst case scenario for turning radius and utilize standard truck turning template.

## 7 - Trash Enclosure (reference site plan)

Trash enclosures should be fully enclosed to prohibit local residents or customers from using the trash enclosure to illegally dump. Although applicant states his staff will be monitoring the grounds $24 / 7$ every hour, the applicant cannot guarantee this action. This failure to guarantee said action allows for the opportunity to illegally dump in the trash enclosure.

By screening / enclosing the trash enclosure applicant guarantees that unless the enclosure is left open by staff, no one can access the enclosure to illegally dump.

## 8-Car Wash (reference site plan)

Although the applicant has proposed the hours of operation of the car wash of 8 am-10pm the hours should be modified to reflect 8am-8pm by this commission. It will be very rare that someone will want to wash their car after 8 pm at night.

The noise level of the wash tube, which is directed at the homes to south, and elevated up above the project elevation will I'm sure cause angst for those residents. Reducing the operating hours by two hours will not cause the applicant to file for bankruptcy and will go a long way in being a good neighbor to the residents they hope will be their customers.

## 9-ADA Path of Travel (reference site plan)

In reviewing the site plans, I did not see an ADA Path of Travel (POT) from the sidewalks to the front of the c-store. Perhaps I missed it, but it is not clear on any of the site plan pages how someone gets from the sidewalk to the front of the store.

## 10 - Public Comments

It is very clear the applicant failed at obtaining public comments via outreach. There are no letters of support from either the Moreno Valley Unified School District (MVUSD) or Kaiser Permanente (KP) much less local residents.

Should the applicant decide, and this commission choose to not address any concerns stated herein, would there be a possibility of simply continuing the item for 60 days to allow for the applicant to do more outreach and/or come to some understanding on these comments?

Will there be an appeal process afforded to the residents?

November 9, 2023
Mr. Alvin DeJohnette, Chair
Moreno Valley Planning Commission
Dear Mr. DeJohnette,
I am writing this letter in strong support of Beyond Food Mart's application for a permit to operate a new gas and charging station with a convenience store at the corner of Iris Ave and Oliver Street. As a nearby resident, I believe that Beyond Food Mart's proposal aligns perfectly with our community's needs and values, and I wish to express my enthusiastic endorsement for this project.

Beyond Food Mart is a reputable and community-oriented company that has consistently demonstrated a strong commitment to quality, service and safety. The addition of a gas and charging station, along with a convenience store, will undoubtedly offer several benefits to our neighborhood including: 1. Safety and Security: Beyond Food Mart has a stellar track record of maintaining a secure and welcoming environment for its patrons. The
installation of a gas and charging station under their management will only enhance safety standards, ensuring that our community members can refuel and recharge their vehicles with peace of mind.
2. Convenience: As our neighborhood continues to grow, the convenience of having a nearby gas station and charging station is essential. Beyond Food Mart will provide residents with a convenient one-stop solution for their fuel and shopping needs, reducing travel times and congestion on our roads.
3. Local Employment Opportunities: Beyond Food Mart has a history of creating job opportunities within the community. The proposed gas and charging station will generate new employment opportunities for our neighbors, contributing to local economic growth.
4. Environmental Responsibility: In an era when environmental sustainability is of utmost importance, Beyond Food Mart's commitment to offering charging stations for electric vehicles aligns with our community's values. This will encourage the use of clean energy alternatives, promoting a greener and healthier environment.
5. Community Involvement: Beyond Food Mart has a strong tradition of actively engaging with the local community, participating in events, and supporting charitable causes. Their presence in our neighborhood will further enhance our sense of community and cooperation.

I kindly request that you consider Beyond Food Mart's permit application, and I hope you will support this project to enhance the quality of life in our neighborhood.

Thank you for your time and consideration.
Sincerely,
Bill Young

## Warning: External Email - Watch for Email Red Flags!

All,
We received the public hearing notice for this evening's Planning Commission meeting. We were surprised to see that a shared access driveway was not incorporated into the submitted plans as all the correspondence from March and April suggested that there would be a shared access. We proceeded with the development of our plans assuming a shared access drive and recently submitted under PAP23-0705. Please note our attached submitted site plan still shows the shared access.

Upon reviewing the submitted plans we reached out to the City and scheduled an emergency meeting with the Transportation department which ended about an hour ago. Based on that meeting we believe that a shared access driveway per the attached would work for both projects and would be approved. Please pardon the fact that this is a hand sketch, we wanted to communicate as quickly as possible.

We plan on attending the Planning Commission hearing this evening and requesting that the Planning Commission delay their vote on approval until we can hopefully get a condition of approval for shared access incorporated. We are not apposing the Beyond project and we want to make it clear that we're not trying to delay that project any more than necessary which is why we met with the Transportation department earlier this afternoon to confirm that a viable path forward could be achieved.

We understand Beyond is likely concerned regarding our respective construction schedules. As such we are willing to allow early construction of this drive aisle prior to our plans being approved. Also, we understand this benefits both projects so we would be willing to share the cost of construction 50/50. The extension of the drive aisle to the rest of our project would of course not be included in the calculated cost. Any shared cost would just be the necessary construction to give Beyond access so.

We are open to communicating prior to the hearing but obviously timing is tight so we're open to speaking later this evening or tomorrow as well.

Thank you,

|  | Report to City Council |
| :---: | :---: |
| TO: | Mayor and City Council |
| FROM: | Jane Halstead, CMC, City Clerk |
| AGENDA DATE: | December 19, 2023 |
| TITLE: | CITY COUNCIL REORGANIZATION - SELECTION OF MAYOR PRO TEM (CONTINUED FROM DECEMBER 5, 2023) |

## RECOMMENDED ACTION

## Recommendation:

1. Conduct the reorganization of the City Council by selecting one Council Member to serve a one-year term as Mayor Pro Tem.

## SUMMARY

The City Council shall meet annually in December to choose one of its members as Mayor Pro Tem. The new Mayor Pro Tem shall be installed, sworn, and shall assume the office at the Council meeting.

## DISCUSSION

Section 4.1.3 of the Rules of Procedure provides that nominations for the office Mayor Pro Tem may be made by any member of the City Council and need not be seconded in order to be effective. Appointment shall be made by three or more affirmative votes on a motion to appoint. In the event that no person receives three or more votes in the selection process, the selection process shall be repeated immediately; provided, however, that the two persons receiving the highest number of votes in the preceding selection process shall be the only nominees. If, upon repeating the selection process of Mayor Pro Tem, no person has yet received three affirmative votes for such office, the City Council may either repeat the selection process until the officer has been duly selected or may continue the selection to the next regular meeting of the City Council.

The new Mayor Pro Tem, shall serve until the next meeting scheduled for selection of the Mayor Pro Tem in December 2024.

## ALTERNATIVES

1. Conduct the reorganization of the City Council by selecting a Mayor Pro Tem.
2. Continue the selection to the next regular meeting of the City Council if upon repeating the selection process, no person receives three affirmative votes for Mayor Pro Tem.

FISCAL IMPACT
There is no fiscal impact associated with the recommended action.

## NOTIFICATION

Publication of the agenda.

## PREPARATION OF STAFF REPORT

Prepared By:
Jane Halstead
Manager of the Office of Mayor and City Council/City Clerk

## CITY COUNCIL GOALS

Positive Environment. Create a positive environment for the development of Moreno Valley's future.

## CITY COUNCIL STRATEGIC PRIORITIES

1. Economic Development
2. Public Safety
3. Library
4. Infrastructure
5. Beautification, Community Engagement, and Quality of Life
6. Youth Programs

Mayor Cabrera made a motion to continue this item to the December 19th, 2023.
Motion made by Mayor Cabrera and seconded by Council Member Marquez to continue the selection of Mayor Pro Tem to the December 19, 2023 City Council Meeting.

Motion passed by a vote of 3-0, with Council Member Baca-Santa Cruz, Council Member Marquez, and Mayor Cabrera voting yes, with Mayor Pro Tem Delgado and Council Member Barnard absent.

Report to City Council
TO: Mayor and City Council
FROM: Brian Mohan, Assistant City Manager
AGENDA DATE:
December 19, 2023
TITLE:
PROVIDE DIRECTION REGARDING THE COUNCIL MOTION TO CANCEL THE JANUARY 02, 2024 REGULAR MEETING

## RECOMMENDED ACTION

## Recommendations:

1. Direct City Clerk to cancel the January 2, 2024 Regular Meeting; or
2. Provide alternate direction to the City Clerk.

## SUMMARY

This report discusses the motion from Council, at the December 5, 2023 Council meeting, to cancel the January 2, 2024 Regular Meeting.

## DISCUSSION

Authorize the City Clerk to publish the notice of cancelation for the January 2, 2024 Regular Meeting.

## ALTERNATIVES

1. Approve and authorize the recommended action item 1 as presented in this report.

Or
2. Provide alternate direction as stated in the recommended action item 2 presented in this report.

## FISCAL IMPACT

There is no fiscal impact with this action.

## NOTIFICATION

Publication of Agenda.

Report to City Council

FROM:
AGENDA DATE:
TITLE:

Mayor and City Council
Mayor and City Council Acting in its Capacity as President and Members of the Board of Directors of the Moreno Valley Community Services District (CSD)
December 19, 2023
RECEIVE, FILE AND ADOPT PARKS, COMMUNITY SERVICES \& TRAILS MASTER PLAN 2023

## RECOMMENDED ACTION

## Recommendations: That the City Council and CSD:

1. Staff recommends that the City Council receive, file and approve the Parks, Community Services, and Trails Master Plan 2023.

## SUMMARY

This report recommends that Council receive, file and adopt the Parks, Community Services, and Trails Master Plan 2023 prepared by KTU\&A as presented.

## DISCUSSION

KTU\&A has produced a comprehensive Parks, Community Services, and Trails Master Plan that will guide the city in short, mid, and long-term projects and programs for current and future Moreno Valley residents. The plan includes community and stakeholder engagement and provides a clear set of goals for both infrastructure and program improvements, maintenance, and operations.

KTU\&A completed several tasks under their agreement including but not limited to the Public Process, Outreach, Surveys, Demographic and Trend Analysis, Existing and Future Facilities Analysis of Level of Service, Prioritizing Demand and Opportunities, Analysis of Programs and Services, Progress Reporting, Action Plan, Development of Final Plans and Supporting Materials to produce a Final Master Plan.

Multiple workshops were held during the year, one in May and the other in September of 2023, to gather community input for inclusion in the final master plan. A number of focus group meetings with community groups, athletic organizations, councils, committees and commissions were also hosted to gather feedback. Of the surveys sent out to the community, 477 were completed and returned.

The proposed Parks, Community Services, and Trails Master Plan includes identified park amenities, facilities, and trail needs. It also categorizes new park opportunities and potential future park sites to help address park access gaps in the city by geographical locations. Infill Opportunity Areas have also been identified for potential parks. Other items included in the recommendations include level of service tables, implementation goals and potential funding sources.

This final version of the Parks, Community Services, and Trails Master Plan was presented to the Parks \& Community Services Subcommittee on December 5, 2023, and to the Parks Community Services and Trails Committee on December 7, 2023, both which have recommended receipt, filing and adoption of the plan from City Council.

## ALTERNATIVES

1. Receive, file, and adopt the Parks, Community Services, and Trails Master Plan 2023 completed by KTU\&A, as presented.
2. Do not accept the Parks, Community Services, and Trails Master Plan 2023 completed by KTU\&A, as presented, and provide alternative direction to staff on how to proceed.

## FISCAL IMPACT

There is no fiscal impact.

## NOTIFICATION

Posting of Agenda.

## PREPARATION OF STAFF REPORT

Patty Yhuit,
PCS Admin \& Financial Svs. Division Manager

Department Head Approval:
Jeremy Bubnick
Parks \& Community Services Director

## CITY COUNCIL GOALS

Advocacy. Develop cooperative intergovernmental relationships and be a forceful advocate of City policies, objectives, and goals to appropriate external governments, agencies and corporations.

Revenue Diversification and Preservation. Develop a variety of City revenue sources and policies to create a stable revenue base and fiscal policies to support essential City services, regardless of economic climate.

Public Facilities and Capital Projects. Ensure that needed public facilities, roadway improvements, and other infrastructure improvements are constructed and maintained.

Positive Environment. Create a positive environment for the development of Moreno Valley's future.

Community Image, Neighborhood Pride and Cleanliness. Promote a sense of community pride and foster an excellent image about our City by developing and executing programs which will result in quality development, enhanced neighborhood preservation efforts, including home rehabilitation and neighborhood restoration.

## CITY COUNCIL STRATEGIC PRIORITIES

1. Economic Development
2. Public Safety
3. Library
4. Infrastructure
5. Beautification, Community Engagement, and Quality of Life
6. Youth Programs

## CHAPTER 01

 INTRODUCTION

### 1.1 WHAT IS A PARKS, COMMUNITY SERVICES, AND TRAILS MASTER PLAN?

The Moreno Valley Parks, Community Services, and Trails Master Plan (Plan) is designed to guide the future of parks, community services, and trails in Moreno Valley. This Plan was developed over a year-long planning process consisting of surveys, community workshops, stakeholder meetings, park visits, and an analysis of the usage of parks, community services, and trails in Moreno Valley. An in-depth assessment of the current state of parks, open space, and community services was conducted to determine opportunities for improvement, expansion, and new development. Extensive community feedback was used alongside the analysis to ensure the Plan prioritizes commu-nity-identified issues, solutions, and priorities for Moreno Valley. To adequately serve Moreno Valley's growing population, this Plan provides recommendations to meet the City's park, community services, and trail needs over the next 10 to 20 years.

Parks, community services, and trails play a critical role in maintaining a healthy, high quality of life in Moreno Valley. Not only do parks, recreation facilities, and programming promote physical health, they also serve a special role in bringing people together to build positive memories, experiences, and relationships. This Plan recognizes the importance of an accessible, well-maintained, and diverse parks and recreation system.

The Plan is intended to help the City achieve the short, mid, and longterm visions and projects identified in the recommendations chapter. Although the Plan does not include conceptual design plans for parks and recreation facilities, there is enough information to help City staff, elected officials, and other stakeholders make informed decisions.

### 1.2 PARKS AND COMMUNITY SERVICES DEPARTMENT

The City's Parks and Community Services Department (Department) is responsible for the operation and maintenance of over 400 acres of parks, over 20 miles of trails, and five public recreation facilities. The Department is also responsible for hosting annual special events, sports programs, and a variety of other recreation programs for youth, adults, and seniors. Other activities and programs the Department assists with include:
" Beautify MoVal Parks and Trails Program
" Healthy MoVal
" Public art programs
") Annual hikes
" Community demonstration garden

## Plan Components

The Parks, Community Services, \& Trails Master Plan includes the following components:

Packet Pg. 2762

### 1.3 PREVIOUS PLANNING HISTORY

There are several City-adopted planning documents and programs that govern the present and future of Moreno Valley's parks, community services, and trails. An extensive review of relevant plans was conducted to ensure this Plan is both consistent with and helps to advance policies and programs. An overview of the most pertinent plans and programs is provided below for reference.

### 1.3.1 CITY OF MORENO VALLEY GENERAL PLAN (2021)

The City of Moreno Valley General Plan (2021) is a comprehensive, long-term planning document that assesses the City's current conditions and plans for how Moreno Valley will grow in the future. The General Plan provides a path for Moreno Valley to achieve its aspirations for growth while maintaining its reputation as a family-friendly community for generations to come. The General Plan is guided by four overarching themes: Dynamic Economy, Vibrant Gathering Places, Community Identity, and Livable Neighborhoods. Under these themes are a number of guiding principles, many of which are relevant to parks, community services, and trails, including, but not limited to:

## Dynamic Economy

" Promote tourism and attract visitors, leveraging natural assets like Lake Perris.

## Vibrant Gathering Places

" Create inviting gateways into Moreno Valley from freeways and major roadways.
" Provide sports, recreation, and cultural facilities that provide a range of options for youth, families, and seniors and attract visitors to Moreno Valley.

## Community Identity

") Design and program public spaces that reflect Moreno Valley's cultural diversity.
" Make Moreno Valley a destination city with a modern, innovative brand and become a model community where people choose to live, work, and play.
"P Provide activities for youth and families to build community bonds.

## Livable Neighborhoods

" Create opportunities for neighborhood interaction.
") Prioritize safety on roads, near schools, in public places, and in neighborhoods.
» Promote active lifestyles with trail connections, parcourse courses, and other recreational amenities.

[^27]
## City of Moreno Valley General Plan: Parks \& Public Services Element (2021)

Within the General Plan is the Parks \& Public Services Element, which includes specific goals, policies, and actions for parks and recreation. This Element establishes a park service standard of three acres of parkland per 1,000 residents. The Element also guides the expansion of its multi-use trail system and envisions a 56mile network expansion. The four goals of the Element are to:

1. Provide and maintain a comprehensive system of quality parks, multi-use trails, and recreational facilities to meet the needs of Moreno Valley's current and future population.
2. Locate, design, and program public facilities as contributors to neighborhood quality of life.
3. Provide for responsive police and fire services that ensure a safe and secure environment for people and property.
4. Provide utilities and infrastructure to deliver safe, reliable services for current and future residents and businesses.

These goals, along with their supporting policies and actions, were considered throughout the planning process and integrated into the Plan's recommendations, where applicable.

## City of Moreno Valley General Plan: Environmental Justice Element (2021)

The General Plan also includes an Environmental Justice Element, which sets goals to prioritize a healthy and safe environment by reducing exposure to pollution; providing safe and sanitary housing; expanding access to healthy foods; and encouraging active engagement in civic life. There are many ways for the Environmental Justice Element goals to be advanced through parks and recreation, including but not limited to the provision of safe outdoor gathering spaces, recreational programming, and opportunities to grow healthy food at community gardens.

### 1.3.2 CITY OF MORENO VALLEY CLIMATE ACTION PLAN (2021)

The City of Moreno Valley Climate Action Plan guides the City's commitment to the reduction of greenhouse gas (GHG) emissions, as well as its compliance with the State's GHG emission reduction standards. The plan establishes a community-wide strategy for reducing Moreno Valley's GHG emissions and will be used as a tool for policymakers, businesses, and community members for years to come. This document also advances the City's General Plan (2021) goal to "prioritize clean air, water, fresh food, and community health."

### 1.3.3 MOMENTUM MOVAL (2016)

Momentum MoVal is a Strategic Plan adopted in 2016 as an effort to bring forward a comprehensive vision to help Moreno Valley thrive as it experiences population and economic growth. This plan initiated a vision for the transformation of a young city into a mature community by creating goals for economic development, public safety, library, infrastructure, beautification, community engagement, quality of life, and youth programming.

### 1.3.4 KEEP MOVAL BEAUTIFUL

Keep MoVal Beautiful is a volunteer and donation program dedicated to the beautification of MoVal's parks, trails, and streets. The program organizes community volunteer events, such as tree plantings, trash cleanups, fence painting, and more.

## CHAPTER 02 ANALYSIS

### 2.1 MORENO VALLEY AT A GLANCE

A demographic profile for Moreno Valley was completed using the most current data available from the U.S. Census Bureau. According to the U.S. Census Bureau, Moreno Valley has a population of 208,371 residents and 55,532 housing units. The racial and ethnic makeup is 28.7 percent white, 17.9 percent African American, 5.3 percent Asian, and 9.5 percent of people identify as two or more races. About 60.4 percent of the population identifies as Hispanic or Latino.

Key demographic comparisons with other state and national statistics include:
" The estimated median age in Moreno Valley is 32.3 , which is slightly lower than the median age of California (37.6) and the United States (38.8).
" The estimated median household income is $\$ 79,840$, which is lower than California $(\$ 84,907)$ and higher than the United States ( $\$ 62,843$ ).
" The population of Moreno Valley is almost evenly split between the sexes with 49.7 percent of the population identifying as male and 50.2 percent as female. The populations of California and the United States are also roughly evenly divided between the sexes.

### 2.1.1 POPULATION GROWTH TRENDS

The Southern California Association of Governments (SCAG) projects that the population will increase by 29.7 percent from 2016 to a total of 266,800 residents by the year 2045. The number of households is projected to increase by 44.6 percent from 2016 to 76,200 in 2045 and the total employment in Moreno Valley will increase by 82.8 percent to a total of 64,900 by the year 2045. The projected population estimates are displayed in Figure 2-1. Several factors that contribute to the projected population increase include new commercial/industrial development along State Route 60 and new housing projects in undeveloped areas of the Moreno Valley.

FIGURE 2-1: Population Growth Trends

### 2.2 PARK CLASSIFICATION

The Plan classifies the City's parks into five categories: Mini Parks, Neighborhood Parks, Community Parks, Linear Parks, and Special Use Parks, as shown in Table 2-1. Each park type provides standard and unique recreation opportunities.

### 2.2.1 MINI PARKS

Mini parks are generally smaller parks that provide both passive and limited active recreation. Although they focus on passive recreation, they play an important role in providing outdoor access to greenspace. These parks are typically less than two acres and serve residents within a halfmile walking distance. Small picnic areas, outdoor exercise areas, and playgrounds are typical park amenities. Other park features may include open grassy areas, benches, landscaped gardens, and small shade structures. Mini parks typically do not include active recreation amenities such as court sports and fields.

### 2.2.2 NEIGHBORHOOD PARKS

Neighborhood parks are generally smaller parks that provide both passive and some active recreation. Although they tend to focus more on passive recreation, they sometimes include a few active recreation amenities such as sports courts. Neighborhood parks play an important role in providing outdoor park access for neighborhoods. These parks are typically less than eight acres and serve residents within a half-mile walking distance. Playgrounds, picnic areas, restrooms, walking paths, and sports courts are typical park amenities.

TABLE 2-1: Park Type by Typical Size and Current Acreage

| PARK TYPE | SIZE | ACRES |
| :--- | :--- | ---: |
| Mini Park | $<2$ acres | 0.5 |
| Neighborhood Park | $2-8$ acres | 102.98 |
| Community Park | > 8 acres | 208.9 |
| Linear Park (counting <br> $25 \%$ of total acreage) | Varies | 10.43 |
| Special-use Facility | Varies | 88.33 |
| Total |  | 411.16 |

Santiago Park: A Neighborhood Park

Westbluff Park: A Neighborhood Park

### 2.2.3 COMMUNITY PARKS

Community parks serve the daily recreational needs of the local neighborhood they are located in, as well as the broader community at large. They are generally between eight and thirty acres in size. They consist of larger park facilities such as sports fields, pools, and multiple-court sports, as well as playgrounds, larger group picnic areas, and walking paths. Community parks serve both residents within a half-mile walking distance and residents within a two-mile driving distance.

### 2.2.4 LINEAR PARKS

Linear parks are narrow, passive park areas that typically have limited amenities. Recreation opportunities are usually designed for walking, jogging, biking, or equestrian uses. Common amenities include benches, picnic tables, outdoor exercise areas, or interpretive signage. For the purposes of calculating level of service (LOS), 25 percent of the total linear park acreage was calculated because the uses within the park space are limited to walking, biking, or other forms of micro mobility.

### 2.2.5 SPECIAL-USE FACILITIES

Special-use facilities are park areas that provide unique recreation opportunities. They are usually limited to a single-use recreation experience such as a dog park, community center, pool, or equestrian center. Spe-cial-use facilities serve both residents within a half-mile walking distance and residents within a two-mile driving distance.

### 2.3 TAKING A LOOK AT MORENO VALLEY'S PARKS

### 2.3.1 A GLIMPSE INTO EACH PARK

## Adrienne Mitchell Memorial Park - 4.4 acres

Adrienne Mitchell Memorial Park is located on the west side of the city along Adrienne Avenue and Pan Am Boulevard. Its amenities include four lighted basketball half-courts, a shaded picnic area with barbecues, a horseshoe play area with two pits, a walking path, and a green grassy area surrounded by trees.

## Bay Side Park - 2 acres

Bay Side Park is located on the northwest side of the city along Bay Avenue. It is a neighborhood park with a playground area, horseshoe, one basketball half-court, a picnic area, and an open grassy area with a walking path.

## Bethune Park-6 acres

Bethune Park is a neighborhood park located at the southern corner of Moreno Valley next to Bethune Elementary School. It has a snack bar, a playground, two tennis courts, shaded picnic areas, a barbecue, and a splash pad area. The City also has a joint-use agreement with Mary McLeod Bethune Elementary School for the use of the two baseball/ softball fields next to the park.

## Celebration Park - 6.7 acres

Celebration Park is located on the east side of Moreno Valley. It is a neighborhood park that offers several amenities including shaded picnic areas, a playground area, one basketball half-court, a walking path, a splash pad, and a large grassy open space. There are several picnic tables and seating areas along the walking path.

## Civic Center Amphitheater and Park - 8 acres

The Civic Center Amphitheater and Park is located off Alessandro Boulevard and Frederick Street. The site contains several facilities, including the Demonstration Garden, 600-seat amphitheater, and the Moreno Valley Conference and Recreation Center (CRC). The Conference and Recreation Center provides access to indoor sports, meeting spaces, and restrooms. The Amphitheater hosts several City events throughout the year including Juneteenth, Fourth of July, MoVal Rocks, Movies, and more.

The Veteran's Memorial can also be found here. It is a space honoring United States Veterans. It is located in front of the Moreno Valley CRC.

Bay Side Park

Bethune Park

Celebration Park

Civic Center Amphitheater and Park

## College Park - 25 acres

College Park is located on the east side of Moreno Valley on Lasselle Street, adjacent to Moreno Valley Community College. It is a $25-$ acre community park that provides access to a playground and large, flat, grassy spaces for sports such as soccer.

## El Portero Park - $\mathbf{1 5}$ acres

El Portero Park is located south end of the city on Lasselle Street. This 15 -acre community park is divided into two areas. A bridge that passes over a flood control channel connects both sides of the park. The large, open, grassy areas provide access to four multi-purpose athletic fields, a soccer field, picnic tables, barbecues, and fitness equipment. A playground and restroom are also located on the east side of the park.

## Fairway Park - 5.5 acres

Fairway Park is located on the east side of the city along on John F. Kennedy Drive. It is a neighborhood park with a multi-purpose field commonly used for soccer tournaments and practices. Other amenities include a restroom, a playground, and volleyball court.

## Gateway Park - 7.7 acres

Gateway Park is a located on the north side of the city along Heacock Street. Amenities at this park include a large, grassy open space, a playground, restroom, several picnic tables, and a parking lot. This park also provides direct access to Sunnymead Linear Park, greatly increasing park access to the surrounding neighborhoods.

## Hidden Springs Passive Nature Park - 17 acres

Hidden Springs Passive Nature Park is located on the northwest end of the city along Greenridge Drive. Although this passive park has limited amenities, residents enjoy access to multi-use trails as well as picnic tables near the trailhead.

## Hidden Springs Park - 7 acres

Hidden Springs Park is a neighborhood park located on the northwest end of the city along Hidden Springs Drive. The park shares its southern boundary with Hidden Springs Elementary School. The park contains a playground, a shaded picnic area with a barbecue, and an open grassy area with baseball backstops.

## Moreno Valley Equestrian Park and Nature Center- 45 acres

Moreno Valley Equestrian Park and Nature Center is a 45 -acre spe-cial-use facility located in the northeast area of the city. The Equestrian Park contains a large arena, a handful of holding pens, hiking trails, and vehicular parking. The Moreno Valley Trailseekers, a 501(c)(3) non-profit organization "dedicated to supporting and promoting the rural lifestyle", conducts various programs at this park. The City's sole dog park (Hound Town Dog Park) is also located within the Equestrian Park. The dog park is 0.25 acres and has a small parking lot, seating areas, and portable restrooms.

## John F. Kennedy Memorial Park - 7.7 acres

John F. Kennedy Memorial Park is a neighborhood park located in the central-west area of the city along John F. Kennedy Drive and Indian Street. Amenities include an adult baseball/softball field with lights, open grassy areas, a playground area, an outdoor exercise area, shaded picnic tables, and four lighted tennis courts. The Riverside County Fire Station is also located within the park's boundary.

## Lasselle Sports Park - $\mathbf{1 2 . 8}$ acres

Lasselle Sports Park is a community park located on the south end of Moreno Valley. The park has three lighted multi-use fields, a large shaded picnic area, a snack bar, a walking path around the fields, and a playground area. This park is also located south of El Potrero Park.

## March Field Park and Valley Skate Park - 93.3 acres

March Field Park and Valley Skate Park is a community park that is located on the west side of Moreno Valley. This park includes a lighted and gated skatepark, a snack bar, two softball/baseball fields, a soccer arena, and picnic tables.

## Moreno Valley Community Park - 15.6 acres

Moreno Valley Community Park is a community park located on the northeast side of the city, adjacent to Moreno Valley High School. This park offers four lighted soccer fields, a playground, picnic tables, a walking path, a skatepark, and a large parking lot.

## Morrison Park - 14 acres

Morrison Park is a community park located in the central-east area of the city that mostly serves as a baseball park. It has four lighted baseball fields, restrooms, a snack bar, and picnic tables with barbecues. It is located across Dracaea Avenue from Mountain View Middle School.

## Parque Amistad - 4.2 acres

Parque Amistad is a neighborhood park located at the southeast corner of Moreno Valley. It is a passive park offering basic amenities that include a playground, a picnic area, two basketball half-courts, and a softball/baseball backstop. Amenities are surrounded by grassy tree-shaded areas.

## Patriot Park - 0.5 acres

Patriot Park is a mini park located on the south side of the city along Perris Boulevard and Filaree Avenue. Its amenities include a walking path and a playground area.

John F. Kennedy Memorial Park

Lasselle Sports Park

March Field Park and Valley Skate Park

Morrison Park

## Pedrorena Park - 5.5 acres

Pedrorena Park is a neighborhood park located in the southeast area of the city along Iris Avenue and Ranch Del Lago. It contains several active recreational amenities, such as a full-size basketball court, four tennis courts, a playground area, and an open grassy area with a baseball/softball backstop. It also has two picnic areas.

## Ridge Crest Park - 5 acres

Ridge Crest Park is located on the east side of the city along John F. Kennedy Drive. It is a neighborhood park next to Ridge Crest Elementary School. It has a playground, restrooms, picnic areas with barbecues, and an open grassy area with a baseball/softball backstop.

## Rock Ridge Park - 1.9 acres

Rock Ridge Park is a neighborhood park located on the northeast side of Moreno Valley. Its amenities include a playground, picnic areas, and a walking path connecting the south and north sides of the park. This park has access to a short hiking trail that leads people to the top of a hill, providing nice views of the surrounding neighborhood.

## Santiago Park-2.8 acres

Santiago Park is a newer neighborhood park located on the southwest side of the city. Its amenities include an outdoor exercise area, a playground area, picnic areas with barbecues, two basketball half-courts, a open grassy area, and a walking path.

## Shadow Mountain Park - $\mathbf{1 0}$ acres

Shadow Mountain Park is located on the north side of Moreno Valley. It is a community park with a large, open grassy space. Its amenities include two youth softball/baseball fields, a soccer field that is used during softball/baseball off-season, a large playground area that includes a zip line, shaded picnic areas with barbecues, a restroom, and a walking path.

## Sunnymead Park - $\mathbf{1 5 . 5}$ acres

Sunnymead Park is a large community park located in the central-north area of Moreno Valley along Perris Boulevard and Fir Avenue. The park is known for the four lighted diamond fields (one baseball field and three softball fields). The park also has a playground, picnic areas with barbecues, concession stands, restrooms, and two parking lots.

Pedrorena Park

Ridge Crest Park

Shadow Mountain Park

Sunnymead Park

## TownGate Memorial Park and TownGate II Park - 17 acres

TownGate Memorial Park and TownGate II Park are jointly located on the northwest side of the city. These two community parks contain a community center building, two separate playground areas, softball/ baseball fields, a multi-purpose field, picnic areas with barbecues, and a walking path. The Juan Bautista De Anza Trail passes through the park's boundary and can be accessed from these parks.

## Victoriano Park - 5 acres

Victoriano Park is located in the southeast side of the city next to Victoriano Elementary School. It is a passive neighborhood park with amenities that include a restroom and a multi-purpose field. Improvements to the park were under construction during the development of this Plan.

## Vista Lomas Park - 4 acres

Vista Lomas Park is located on the east side of the city along Iris Avenue. It is a neighborhood park that contains two basketball halfcourts, a playground area, a shaded picnic area, and open grassy areas with backstops.

## Westbluff Park - 5 acres

Westbluff Park is located in the north side of the city between Vista Heights Middle School and Canyon Springs High School. It is a small neighborhood park with a large playground, picnic areas with barbecues, and a walking path.

## Weston Park - 4.1 acres

Weston Park is located on the northeast side of the city along Lasselle Street. This neighborhood park contains several amenities such as a restroom, a playground area, picnic tables, a full-size basketball court, and a multi-use trail. NBA All-Star Kawhi Leonard partnered with the City and other stakeholders to help build the existing basketball court and design the mural on the court's surface.

## Woodland Park - 9.1 acres

Woodland Park is a community park located in central Moreno Valley along Cactus Avenue. It contains several amenities, including a restroom, two playground areas, a lighted softball field, four tennis courts with, pickleball courts overlaid on the tennis courts, four basketball half-courts, walking paths, and a play area with chess tables.

TownGate Memorial Park

Vista Lomas Park

Westbluff Park

### 2.3.2 MORENO VALLEY COMMUNITY FACILITIES <br> Moreno Valley Conference and Recreation Center (CRC)

The Moreno Valley Conference and Recreation Center is the city's premiere indoor facility. It is located in the central-west area of the city on the corner of Frederick Street and Alessandro Boulevard. This facility offers residents access to several spaces, such as the 8,200-square foot ballroom that has a full kitchen, stage, dressing rooms, and AV technology. The Center also has two meeting rooms, an outdoor banquet patio, a large gymnasium, aerobics studio, a Teen Center, and several activity rooms for recreation programs.

## TownGate Community Center

The TownGate Community Center is located on Arbor Park Lane within TownGate II Park. The amenities in this facility include a 2,000 -square foot ballroom that can be used for events and a covered courtyard overlooking the park. The Community Center also contains several activity rooms for classes and programs.

## Senior Community Center

The Senior Community Center is located on Fir Avenue. Its amenities include a 3,500-square foot ballroom with a full kitchen, tables, and chairs. There are two additional meeting rooms with tables and chairs that are used for senior classes and programs.

## Cottonwood Golf Center

The Cottonwood Golf Center and Banquet Room is located on Frederick Street. This facility offers a banquet room, a spacious lobby, and a separate activity room.

## Moreno Valley Libraries

The Moreno Valley Public Library has three branches that serve the city. The main library is located on Alessandro Boulevard while the other two locations can be found in the Moreno Valley Mall on Town Circle and in the Iris Plaza on Perris Boulevard. Moreno Valley residents have access to books, public computers, and free Wi-Fi at the three library branches.

[^29]
### 2.4 QUALITATIVE ANALYSIS OF EXISTING PARK AMENITIES

The park amenity inventory included an assessment of the overall condition of each major amenity. The project team counted and inspected each amenity and gave it one of four grades: Excellent, Good, Fair, or Poor. The team was not evaluating individual pieces of a park amenity. For example, the nuts and bolts of a playground slide were not inspected one by one. Instead, the team assessed the overall playground structure condition based on the team's design and construction expertise. If interested in a greater level of detail and precision, the City can perform an asset evaluation of all park facilities and amenities.
"Excellent" means that the amenity is in near-perfect condition and has many years left in its life cycle. "Good" means that the amenity is not quite brand new, it may have some minor signs of wear and tear but it is functioning as it should. "Fair" means that the amenity is functioning, but it is showing some major signs of wear and tear and will be in need of replacement or repair in the near future. "Poor" means that the amenity is not functioning for its intended use and needs to be replaced as soon as possible. The condition of each amenity at each park was averaged to determine the overall condition of the park.

Table 2-2 shows the average conditions of each amenity at each park. Lasselle Sports Park and Santiago Park were the only two parks to receive an excellent overall condition rating, while March Field Park and Valley Skate Park was the only park to receive a poor overall condition rating. Table 2-2 helps to determines which parks will require the allocation of additional resources to replace amenities in the future.

TABLE 2－2：Qualitative Analysis of Existing Park Amenities

| QUALITATIVE ANALYSIS OF EXISTING PARK AMENITIES |  |  |  |  | 上 <br> 2 <br> 0 <br> 0 <br> 0 <br> 2 <br> 2 <br> 2 <br> 1 |  |  | ㅁ $\frac{2}{1}$ $\frac{1}{5}$ $\frac{1}{4}$ a |  |  |  | ૪ヨyv ヨsioxヨXe ぬoocıno |  |

| Ridge Crest Park |  |  |  |  |  |  |  |  |  |  |  |  | Fair |
| Rock Ridge Park |  |  |  |  |  |  |  |  |  |  |  |  | Good |
| Santiago Park |  |  |  |  |  |  |  |  |  |  |  |  | Excellent |
| Shadow Mountain Park |  |  |  |  |  |  |  |  |  |  |  |  | Good |
| Sunnymead Park |  |  |  |  |  |  |  |  |  |  |  |  | Good |
| TownGate Memorial Park |  |  |  |  |  |  |  |  |  |  |  |  | Fair |
| Victoriano Park |  |  |  |  |  |  |  |  |  |  |  |  | Good |
| Vista Lomas Park |  |  |  |  |  |  |  |  |  |  |  |  | Fair |
| Westbluff Park |  |  |  |  |  |  |  |  |  |  |  |  | Fair |
| Weston Park |  |  |  |  |  |  |  |  |  |  |  |  | Fair |
| Woodland Park |  |  |  |  |  |  |  |  |  |  |  |  | Good |

### 2.5 ADJACENT PARKS AND FACILITIES

Figure 2-3 displays the two parks and recreation facilities located adjacent to Moreno Valley.

## Lake Perris State Recreation Area

The Lake Perris State Recreation Area is operated by California State Parks and is located on the southeast side of the city. The reservoir lake provides many opportunities for recreation use, such as fishing, boating, swimming, and water sports. The areas surrounding the lake provide opportunities for camping, hiking, bicycling, wildlife viewing, and hunting. The recreation area also hosts events, like music festivals, throughout the year. There is an entry fee for visitors that varies by activity type.

## Box Springs Mountain Reserve Park

Box Springs Mountain Reserve Park is a 3,400-acre park operated by Riverside County Parks. It overlooks the cities of Riverside and Moreno Valley. This mountain reserve is located on the northwest border of the city. This reserve has several miles of multi-use trails and pathways that vary in difficulty. Locals enjoy these trails for hiking and wildlife viewing. The mountain range peak elevation is approximately 3,000 feet. There are also picnic tables and restrooms located at the two parking areas.

### 2.6 EXISTING TRAILS

Figure 2-4 displays existing and previously proposed trails in Moreno Valley, including the following three popular trails:

## Juan Bautista de Anza Trail

The Juan Bautista de Anza Trail is a $1,210-$ mile historic route that runs from the U.S.-Mexico border to San Francisco and includes a segment through Moreno Valley. An eight-mile segment of the trail runs diagonally through the city from TownGate Park to Lake Perris. The trail is mostly a multiuse path except for a small segment of Class II bike lanes along Alessandro Boulevard and Heacock Street. In 2022, the City commemorated the addition of a new two-mile trail segment that stretches from El Potrero Park to Lake Perris.

## Sunnymead Trail

Sunnymead Trail is a multi-use trail located on Sunnymead Ranch Parkway and Via Del Norte on the north side of Moreno Valley. The trail traverses across streets before it follows a path behind residential homes, which creates a more enclosed and shaded trail until it reaches a mountain.

## Cold Creek Trail

Cold Creek Trail is a multi-use trail located east of Moreno Valley. It is a 2.5 -mile out-andback trail that leads to a small mountaintop and typically takes about an hour to complete.

Juan Bautista Trail

Sunnymead Trail

Multi-use Trail

### 2.7 LEVEL OF SERVICE ANALYSIS

Level of Service (LOS) within the context of park planning is a measurement to evaluate how parks, open spaces, and facilities serve the Moreno Valley community. For this Plan, three different types of park LOS analysis were used to determine park LOS.

1. Population-based LOS analysis
2. Amenity LOS analysis

## 3. Geographic distribution LOS analysis

These three LOS analysis methods allow the project team to determine how well the existing park system is serving the community from an analytical perspective.

Population-based service analysis uses the most recent population data and existing park acres to determine LOS. The amenity LOS analysis uses existing park amenity numbers and existing population data and compares them to national averages set by the National Recreation and Park Association (NRPA) to determine amenity surpluses and deficits. The geographic distribution level of service analysis determines the actual geographic coverage that each park serves based on the road network by creating park "travelsheds".

### 2.7.1 POPULATION-BASED LEVEL OF SERVICE ANALYSIS

The City's General Plan (2021) established a goal to have three park acres per every 1,000 residents. Table 2-3 shows that the City is very close to reaching this goal and needs to add additional park acres to achieve it. The City's existing park system has 411.16 acres of parkland ( 1.97 park acres per 1,000 people) and will require an additional 213.96 acres of parkland to provide three acres of parkland for every 1,000 residents.

TABLE 2-3: Population-based Level of Service

| 2021 LOS | ALL CITY PARKS |
| :--- | :---: |
| Existing Park Acreage | 411.16 |
| Recommended Adopted Standard <br> per 1,000 Population | 3.00 |
| Acres per 1,000 Population (2021) | 1.97 |
| Total Surplus/Deficit Acres per <br> 1,000 Population (2021) | -1.03 |
| Acres in Deficit | 213.96 |

### 2.7.2 AMENITY LEVEL OF SERVICE ANALYSIS

A thorough analysis of each park was completed as a part of the existing conditions analysis of this Plan. This included field surveys to inventory park and recreation amenities at each park and recreation facility in Moreno Valley. Through this process, a detailed catalog of park amenities was produced. Total amenity inventory counts for Moreno Valley were compared to national averages of city-wide park and recreation system amenities derived from the NRPA guideline service level and recommended benchmarks averages from 2008 to 2022. The calculations are based on the latest population estimates for Moreno Valley $(208,371)$ according to the 2021 Census American Community Survey (ACS) 5-Year estimates. The results of this analysis are shown in Table 2-4.

According to the NRPA national benchmark averages, the City is currently meeting the needs of several amenities including multi-use courts (tennis/pickleball), equestrian staging areas, and golf centers. However, the City is currently not meeting the needs for many amenities highlighted in Table 2-4, some of the largest amenities deficits include court sports like basketball, volleyball, tennis, and pickleball, as well as recreation centers, group picnic areas, rectangular soccer fields, multi-purpose fields, splashpads/spraygrounds, community gardens, and walking loops. The full list of amenities with inventory deficits is shown on Table 2-4.

While the amenity LOS serves as a valuable indicator for identifying general surpluses and deficits, it should not be the only indicator for identifying shortcomings of amenities in the existing parks and recreation system. It is important to cater to the unique needs of the Moreno Valley community as well as national and regional trends in parks and recreation specific to southern California. Trends like handball, birdwatching, hiking, and adventure sports like rock climbing, bouldering, obstacle courses, and adventure playgrounds are all currently trending and growing in popularity. These activities are not adequately reflected in the NRPA national survey data. Therefore, it is important to have an additional lens that captures the needs and priorities of the ever-evolving community. This approach, coupled with the population-based LOS, can provide a comprehensive understanding of the future park needs. Detailed analysis regarding these needs will be discussed in the following sections and chapters of this Plan.

|  | Outdoor Exercise Area/Exercise Path | 3 | - | 28,000 | 7.4 | -4.4 |

[^30]
### 2.7.3 GEOGRAPHIC DISTRIBUTION LEVEL OF SERVICE ANALYSIS

A Geographic Distribution Analysis (GDA) was performed at all of the City parks. A GDA examines the walktime and drivetime to these parks and facilities based on a Geographical Information System (GIS)-based travelshed analysis. Results from this analysis are displayed in Figure 2-5.

The park's GDA analysis takes into account the percentage of the population served by mini/ pocket parks, neighborhood, community, and special-use parks. The method used takes into account walking or driving distances that consider walking, biking, and driving routes that someone would use to get to these parks. By using the actual road network, this analysis calls attention to the need to improve the local sidewalk, bike, and road
network to improve access to parks and facilities. The GDA is important because it highlights the neighborhoods that do not fall within these park travelshed areas, which indicates that these areas currently lack easy access to parks.

## Park Travelsheds

A travelshed analysis for each park in Moreno Valley was completed to determine the geographic service area for the park system. The analysis generated polygons representing a halfmile travelshed or 15-minute walk, given a walking speed of 2.5 mph (slowed to 2 mph to take into account street crossings, some with signals). The half-mile travelshed polygons were superimposed on the city base map with residential land uses to see which regions were well covered by park access. The
 results of this analysis are displayed on Figure 2-5.
$\square$ Half-Mile Parks Travelshed
Parks
Schools
Sphere of Influence

Multi-Family Residential
Mixed Residential
Mobile Homes \& Trailer Parks
Single Family Residential

Rural Residential

## Amenity-specific Travelsheds

The following series of maps feature park travelsheds that contain specific amenities. These maps illustrate the geographic distribution of amenities across the city.

Figure 2-6 displays the half-mile travelshed of parks with playgrounds. Figure 2-6 illustrates that most parks in the city contain playgrounds and the geographic playground coverage is relatively the same as the park travelshed coverage shown in Figure 2-5. Significant playground gaps exist all throughout the city.

Figure 2-7 shows the half-mile travelshed of parks that contain sport courts. There are many residential areas within the city that do not have sport courts within a half-mile walk. There are gaps all throughout the city, with the most significant gaps north of SR 60 and in the eastern areas of the city.

Figure 2-8 shows the half-mile travelshed of parks with sport fields. Figure 2-8 illustrates that there are significant field sport gaps throughout the city, with significant gaps existing in the northern and eastern areas of the city.

Figure 2-9 shows both half-mile travelsheds and two-mile travelsheds of indoor recreation facilities in the city. Since residents are likely to drive to larger community facilities like a recreation center, two-mile travelsheds were used in this analysis in combination with half-mile travelsheds. Gaps exist in the northern, southern, and eastern areas of the city.

Figure 2-10 shows half-mile and two-mile travelsheds of the trails in the city. Gaps exist in the north-central and eastern areas of the city.

Sphere of Influence

## $\square$ <br> Sphere of Influence

### 2.8 PARK PRESSURE

Analyzing how the existing park system is serving the current population is important because it can help determine priority areas within the existing travelshed for new parks or park renovations in the future. It is assumed that these areas of high deficit will continue to worsen in the future as additional development and population growth occurs and no new parks are added to the park system.

Park pressure is a modeled analysis of park size and accessibility to demonstrate how park usage or "pressure" varies in different parts of the city. Park pressure is based on the residential population density within the half-mile travelsheds of each park. This process assumes that residents use the park that is closest to their home.

Each park centered in a travelshed offers a unique amount of acres per the number of residents in the covered travelshed. The estimated number of potential park users within each travelshed is based on population data from the U.S. Census Bureau. The acreage of each park was used to calculate the number of park acres available per 1,000 residents within the travelshed. The City's established goal of three park acres per 1,000 residents was used as the basis of the park pressure model, shown in Figure 2-11. Areas may have a surplus of acres per 1,000 residents or a deficit based on the residential density around each park.

FIGURE 2-11: Park Pressure Model

### 2.8.1 EXISTING PARK PRESSURE

Figure 2-12 shows that many park travelsheds in the city fall within the deficit category because they have a large number of residents with fewer park acres available to them. These are shown as the red, orange, and yellow colors. Areas around Bay Side Park, Weston Park, Patriot Park, and Parque Amistad have greater park pressure due to the higher density of residents living nearby. These parks are more likely to experience
heavier demand and use due to the lack of park acres relative to the number of residents living nearby.

The dark to light green areas represent where pressure on the parks is lighter because the parks have a greater acre-to-resident ratio. In other words, bigger parks with fewer residents in close proximity experience less park pressure. Areas around the Juan Bautista Trail, Equestrian and Dog Park, Westbluff Park, Celebration Park, and Fairway Park have less park pressure.

### 2.9 PARK EQUITY

Despite the widespread and well-documented benefits of parks and open spaces to health and well-being, in many cities across the United States, these benefits are not distributed equitably. Studies show that racial and socio-economic factors play a role in the provision, distribution, and quality of parks in many cities across the nation. In 2021, The Trust for Public Land reported that neighborhoods where residents predominantly identify as people of color have access to an average of 44 percent less park acreage than predominantly white neighborhoods, and low-income neighborhoods average 42 percent less park acreage per person than high-income neighborhoods. The Trust for Public Land also revealed that parks in communities of color are, on average, five times more likely to be crowded and half the size of parks that serve white populations. Similarly, parks that primarily serve low-income households are, on average, four times smaller than parks that serve a majority of high-income households. Studies have also shown that in addition to having access to less park acreage, low-income communities and communities of color tend to have access to poorer-quality park spaces with less recreational programming. ${ }^{1}$

Recognizing systemic inequities in park access and quality is integral to creating an equitable park and recreation system for Moreno Valley. The City's General Plan (2021) established goals for addressing community-wide injustices and determined that the City should target investments in public infrastruc-
ture, including recreational facilities and programming to benefit disadvantaged communities in Moreno Valley. Disadvantaged Communities refer to State-identified communities that experience combined high levels of economic, health, and environmental burdens. As displayed in Figure 2-13, Disadvantaged Communities in Moreno Valley are generally concentrated in the more densely populated areas in the western areas of the city, close to the freeways and major transportation corridors.

## Disadvantaged Communities with Limited Park Access

Figure 2-14 highlights areas where residential areas with limited park access overlap with disadvantaged communities. The yellow areas in Figure 2-14 show residential neighborhoods that are not within a half-mile (or walking distance) of a park to demonstrate areas with limited park access. The areas outlined in red show residential neighborhoods with limited park access that are also designated as disadvantaged communities. Figure 2-14 shows that the majority of disadvantaged communities also experience limited park access, indicating that park deficiencies disproportionately affect underserved neighborhoods. To address systemic injustices, invest in Moreno Valley's disadvantaged communities, and advance City-adopted policies in the General Plan, the areas featured in Figure 2-13 and Figure 2-14 should be prioritized for any park improvement, enhancement, or development projects.

[^31]

### 2.10 RECREATION PROGRAMS

### 2.10.1 CURRENT PROGRAMS AND SERVICES OFFERINGS

## Recreation Facilities

The City provides recreational programming through its Parks and Community Services Department in the various recreational facilities and parks it owns. Funding to support programming is primarily from special taxes paid by property owners through the Community Services District, which is one of several established special financing districts in Moreno Valley. The City is one of the largest municipalities in the area and provides a robust recreation program with multiple programming options for residents.

As described earlier in the Chapter, the City has many parks and facilities. Most recreational programming is hosted at one of the four community facilities: Cottonwood Golf Center, Moreno Valley Senior Center, Moreno Valley Conference and Recreation Center, and TownGate Community Center.

Moreno Valley CRC is the primary meeting facility in the City and provides over 42,000 square feet of flexible event and reception space for the community to use. Most non-outdoorsports and non-senior program-
ming is held in the CRC. The CRC is located at the Civic Center in the "downtown" or central government services area of Moreno Valley. The Cottonwood Golf Center, the TownGate Community Center, and the Senior Center are additional recreational facilities used to provide specialized programming for specific demographics or areas. However, due to the large size of Moreno Valley and the limited number of recreational facilities, it is challenging for the City to offer programming close to where many residents live.

## Recreation Programs \& Special Events

The City currently offers various services and programs for youth, adults, families, and seniors, as well as several annual special events. Recreation programs offered by Moreno Valley include:

## Youth

" After-School Activities (Educational Workshops, Homework Assistance, etc.)
" Time for Tots (Skill Building, Dual Language Learning)
" Online Classes (Art, Coding, Game Design, Guitar, Keyboard)
") Esports
" Dance Classes (Ballet, Folkloric, Hip Hop, Cheerleading, Hula)
" Basketball (Clinics, Open Play, Leagues)
" Day Camp
") Fitness (Adaptive Zumba)
" Martial Arts (Tae Kwon Do, Aikido, Vovinam, etc.)
" Pickleball
» Tennis
" Soccer (Coming in 2024)
" Snow Day Youth Sledding
" Teen Tutoring
" Volleyball

## Adult \& Family

" Basketball (Open Play, League Play)
" Culinary Arts (Cooking with the Trendy)
" Dance Classes (Folkloric, Salsa, Line)
" Fitness (Zumba, Pilates)
" Garden Workshops
") Martial Arts (Karate)
" Pickleball
» Skills and Education (Social Club for Development)
" Volleyball

## Seniors

" Arts \& Crafts (Creative Writing, Crochet, Scrapping, Quilting)
" Clubs (Art, Weight Loss Support)
" Dance (Ballet, Dancercise, Line Dancing)
") Fitness (Aerobics, Tai Chi, Yoga, Zumba)
» Game (Bingo, Billiards, etc.)
" Music (Guitar)
" Skills Improvement (CPR, Driving, Notary Services)
" Social Services (Counseling, Housing Assistance, Meals, Transportation)
" Special Events (International Day, Birthday Celebrations, Veterans Day, etc.)

## Special Events

" Adult Flashlight Egg Scramble
") Day of the Dead
") Earth Day and Tree Giveaway
» El Grito Festival
" Fun Color Run
" Holiday Tree Lighting
» Independence Day
» Juneteenth
» MoVal Movies
" MoVal Rocks!
» Multicultural Festival
" Public Safety Expo
" Snow Day
") Springtastic
" Veterans Day Ceremony and Art Contest

## Recreation Program Popularity

Tracking the most popular recreation programs currently offered by the City provides critical insights into program successes and areas for improvement. Table 2-5 displays the top 15 recreation programs based on registration totals for 2022. In 2022, the most popular programs were: Winter Youth and Teen Basketball Leagues, Shito-Ryu Youth Karate, and Time for Tots.

## Recreation Program Capacity

Program registrations were also analyzed to determine which programs met or exceeded registration capacity. This analysis evaluates program success based on the desired number of attendees compared to the actual number registered. In recreation, the ideal number of program participants varies by program type, such as a summer camp with hundreds of participants, or an art class with 10 to 20 participants. As such, a percentage fill rate is a more insightful method to evaluate program success because it is based on more than total registration numbers alone.

Table 2-6 lists the programs that, on average, had a registration percentage that exceeded the expected capacity in 2022. Programs over 100 percent capacity are highly anticipated and enjoyed by the community. Top programs include dance programs, youth and teen basketball, day camps, cheerleading programs, and art programs. To meet community demand, the City should continue offering and consider adding more sessions of programs that continually meet or exceed capacity.

TABLE 2-5: Top Fifteen Programs by Registration Totals in 2022

| PROGRAM | REGISTRATIONS |
| :--- | :---: |
| Winter Youth and Teen Basketball | 401 |
| Shito-Ryu Karate - Youth | 341 |
| Time 4 Tots - CRC AM | 282 |
| Dance Exploration | 255 |
| Folkloric Dance - Youth | 245 |
| Summer Youth and Teen Basketball | 205 |
| Ballet/Acro | 191 |
| Valley Day Camp (5-6 years) | 173 |
| Vovinam Martial Arts | 171 |
| Sunshine Social | 169 |
| Beginning Ballet for Kids | 167 |
| Time 4 Tots - Towngate | 164 |
| Valley Day Camp (11-14) | 157 |
| Valley Day Camp (7-8 year) | 153 |
| Valley Day Camp (9-10) | 153 |

TABLE 2-6: Recreation Programs Over 100\% of Capacity in 2022

| PROGRAM | PERCENTAGE OF <br> REGISTRATION <br> SPOTS FILLED |
| :--- | :---: |
| Dance Exploration | $135 \%$ |
| Summer Youth and Teen Basketball - May | $123 \%$ |
| Valley Day Camp (ages 11-14) | $115 \%$ |
| CYSC All Stars Cheer | $110 \%$ |
| Valley Day Camp (ages 7-8) | $110 \%$ |
| Ballet/Acro - June | $110 \%$ |
| Winter Youth and Teen Basketball - November | $109 \%$ |
| Art Expression | $108 \%$ |
| Valley Day Camp - June (ages 9-10) | $105 \%$ |
| Beginning Ballet for Kids | $105 \%$ |
| Summer Time 4 Tots | $105 \%$ |
| Ballet/Acro | $105 \%$ |
| Summer Youth and Teen Basketball - May-June | $104 \%$ |
| CYSC All Stars Cheer | $103 \%$ |
| Shito-Ryu Karate - Youth | $103 \%$ |
| POM-POM Cheerleading | $103 \%$ |
| Soccer (Pee Wee M/W) | $103 \%$ |
| Basketball League (Junior) | $103 \%$ |
| Winter Youth and Teen Basketball - Dec-Feb | $101 \%$ |

*Note: Some programs are offered multiple times per year and have different registration totals each season. These programs are shown per program offering rather than as an aggregate of all offerings of the same program and may be listed in Tables 2-5 through 2-7 multiple times.

Table 2-7 displays programs with registrations between 75 and 100 percent of the program capacity. While the programs listed in Table 2-7 did not exceed full capacity, they are still achieving high levels of success and should continue to be provided, but do not require expansion at this time. Programs in this category included preschool programs, dance, martial arts, food rallies, day camps, and basketball clinics.

TABLE 2-7: Recreation Programs between 75\% and 100\% of Capacity in 2022

| PROGRAM | \% OF REGISTRATION SPOTS FILLED | PROGRAM | \% OF REGISTRATION SPOTS FILLED |
| :---: | :---: | :---: | :---: |
| Time 4 Tots - CRC AM - February | 100\% | Valley Day Camp - June (ages 11-14)* | 90\% |
| Dance Exploration - November | 100\% | Valley Day Camp - August (ages 11-14) | 90\% |
| Youth Shito-Ryu Karate | 100\% | Valley Day Camp - June (ages 11-14)* | 90\% |
| Youth Art Expression | 100\% | Valley Day Camp - July (ages 7-8) | 90\% |
| Springtastic Food Vendor | 100\% | Time 4 Tots - CRC AM - January | 87\% |
| Valley Day Camp - June (ages 11-14) | 100\% | Summer Youth and Teen Basketball | 87\% |
| Valley Day Camp - July (ages 7-8) | 100\% | Valley Day Camp - July (ages 7-8) | 85\% |
| Valley Day Camp - June (ages 9-10) | 100\% | Summer Time 4 Tots | 85\% |
| Youth Shito-Ryu Karate - October | 100\% | Beginning Ballet for Kids - June | 85\% |
| Junior Basketball Clinic | 100\% | Valley Day Camp - July (ages 5-6) | 83\% |
| Pee Wee Basketball Clinic | 100\% | Winter Youth and Teen | 83\% |
| Pee Wee Basketball League | 100\% | Dance Exploration - March | 82\% |
| Ballet/Acro - September | 100\% | Day of the Dead - Food | 82\% |
| 2 Person, 2 Club, Partner | 100\% | Valley Day Camp - July (ages 5-6)* | 80\% |
| Time 4 Tots - CRC AM - March | 97\% | Valley Day Camp - July (ages 7-8) | 80\% |
| Winter Youth and Teen Basketball Clinic - Nov | 97\% | Valley Day Camp - July (ages 9-10) | 80\% |
| POM-POM Cheerleading | 97\% | Valley Day Camp - August (ages 9-10) | 80\% |
| Summer Youth and Teen | 95\% | Ballet/Acro - August | 80\% |
| Valley Day Camp - July (ages 11-14) | 95\% | Summer Time 4 Tots | 80\% |
| Valley Day Camp - June (ages 7-8 year) | 95\% | Beginning Ballet for Kids - May | 80\% |
| Valley Day Camp - July (ages 9-10) | 95\% | Day of the Dead Retail | 80\% |
| Ballet/Acro - October | 95\% | Soccer (Junior M/W) | 78\% |
| Soccer (Pee Wee T/TH) | 94\% | Time 4 Tots - CRC AM | 77\% |
| CYSC All Stars Cheer | 93\% | Time 4 Tots - TownGate | 77\% |
| Youth Shito-Ryu Karate - November | 93\% | Beginning Ballet for Kids - August | 75\% |
| Youth Shito-Ryu Karate - December | 93\% | Ballet/Acro - July | 75\% |
| Valley Day Camp - July (ages 5-6)* | 93\% | Public Safety Expo Food | 75\% |
| Winter Youth and Teen Basketball Clinic (Dec-Feb) | 92\% | Summer Time 4 Tots | 75\% |
| Cooking with the Trendy | 90\% | Beginning Ballet for Kids - July | 75\% |
| CYSC All Stars Cheer | 90\% | Art Expression | 75\% |

[^32]
### 2.10.2 POPULAR RECREATION PROGRAMMING IN MORENO VALLEY

Based on an analysis of recreational programming data for Moreno Valley in 2022, the programs with the highest interest and participation from community members are:
» Youth sports (specifically basketball and cheerleading)
") Dance classes (Ballet and Exploration Classes)
" Youth camps (Day Camps and Summer Camps)
" Toddler programs
" Martial arts (Shito-Ryu Karate)
" Special events
Currently, these programs are the most successful and should continue to be provided to the community and considered for future expansion, as needed. Additionally, community feedback indicates that there is high interest in expanding sports, teen, and gardening programs in Moreno Valley.

## Sports Leagues

The City offers several youth and adult recreational sports leagues. These include basketball, t-ball, soccer, and softball for various age groups. These leagues are all included in the City's programming options for the year, and as previously shown, are typically some of the largest attended programs provided by the City. Beginning in Fall 2023, the City will also be offering youth golf classes, which will teach participants the basics of the sport.

## Teen Programs

There is an interest in expanding the City's teen programs to increase interest and participation. The City already provides many teen programs and is actively working to attract more participants. However, because most of these programs are hosted in the CRC, they are hard for many teens to access due to transportation barriers. Providing additional satellite locations for teen programming and/or offering transportation options would make programs more accessible to teens and boost participation.

## Community Demonstration Garden

The City's Community Demonstration Garden hosts programs that teach gardening skills and best practices. Community feedback indicates a growing interest in broadening the programming provided at the Community Demonstration Garden and expanding the types of gardening practiced on site to and creating additional demonstration gardens to other areas in Moreno Valley.

## 2．10．3 POPULAR RECREATION PROGRAMMING NATIONWIDE

The NRPA has published an Agency Performance Review that documents programming offered by parks and recreation agencies across the country．The results of the review included the percentage of agencies that perform specific types of programs．The examples provided show various programs that fall under each category．The data includes agencies of all sizes in various regions to illustrate that the City is providing ele－ ments of programming that are popular in agencies across the country．With the exception of aquatics and safety training，the City offers all of the program categories to Moreno Valley residents．
» Themed special events（offered by 90 percent of comparable agencies）
＂）Earth Day，Flag Day Parade
＂Social recreation events（offered by 88 percent of comparable agencies）
＂Card games，dances
＂Team sports（offered by 87 percent of comparable agencies）
＂Basketball，Soccer，and Cheerleading Camps
＂Fitness enhancement classes（offered by 82 percent of comparable agencies）
» Yoga，Zumba
» Health and wellness education（offered by 80 percent of comparable agencies）
》 Nutrition classes，mental health classes
》 Individual sports（offered by 76 percent of comparable agencies）
＂Karate，gymnastics
＂Safety training（offered by 72 percent of comparable agencies）
» CPR，pedestrian safety
＂Racquet sports（offered by 71 percent of comparable agencies）
» Tennis，pickleball
＂Aquatics（offered by 70 percent of comparable agencies）
》）Learn to swim programs，aquatic fitness

### 2.10.4 RECREATION PROGRAMMING ANALYSIS

A review and analysis of the City's recreation programming and staffing was conducted to compare the City to nationwide data collected in the NRPA Agency Performance Review.
» Nationwide Programming Assessment: The City's recreation programming was compared to nationwide recreation programming data to assess if major programming areas commonly provided across the nation are offered in Moreno Valley.
" The general programming analysis compares general programming areas, such as team sports, special events, and aquatics, based on a set of variables, designed through NRPA's research, to compare communities of similar size. These variables are park acres, number of parks, population, and region. This assessment allows an 'apples to apples' comparison between Moreno Valley and similarly sized communities.
" The specific programming analysis is very similar to the general programming analysis, but with a deeper dive into types of programming. This table compares specific types of programming, such as Science, Technology, Engineering, and Mathematics (STEM), summer camps, and specific senior programming.
» Regional Programming Comparison: In addition to a nationwide programming assessment, a regional programming comparison was conducted to compare the City's program offerings to local agencies in the same region.

## Nationwide Programming Assessment

An assessment was conducted using NRPA Agency Performance Data to compare Moreno Valley's general and specific program offerings to the offerings provided by other parks and recreation agencies. To facilitate a fair comparison, the agencies included in the assessment have a similar number of parks, park acreage, and population as Moreno Valley.

## General Programming Assessment

Table 2-8 lists the general programming types included in the NRPA Agency Performance Review and shows which programs are provided by the City alongside the percentage of comparable communities that provide the same program and is broken down by several variables. The general programming analysis shows that the City compares favorably to most entities with similar circumstances. However, the City does not currently provide aquatics or safety training programs, like some other comparable agencies. Aquatics programs are not provided due to a lack of aquatic facilities owned or utilized by the City. Aquatics programs require specialized facilities, such as a pool or aquatic center, which the City currently does not have, or strategic partnerships with an entity that does. The City can consider finding qualified instructors to provide safety training programs for the community.

## Specific Programming Assessment

Table 2-9 displays an analysis that compares specific programming provided by the City to comparable national entities. The analysis shows that the City provides the majority of specific programs geared towards youth, adults, and seniors, including summer camps, which are one of the most popular programs provided across the nation. The only specific program not provided by the City is full daycare, which is rarely provided by agencies with similar circumstances to the City.

## How to Understand

Table 2-8 \& Table 2-9
Look at the row for "Themed Special Events" as an example. Themed special events are provided by 92 percent of communities with similar park acreage, 93 percent of communities with a similar population size, 93 percent of communities with a similar number of parks, and 94 percent of communities in the same region as Moreno Valley. 90 percent is the average percentage of these four variables and provides a comprehensive look at the percentage of communities similar to Moreno Valley that provide themed special events. The check mark under Moreno Valley indicates that the City provides themed special events.

TABLE 2-8: General Programming Analysis based on NRPA Agency Performance Data

| PROGRAMMING TYPE | MORENO <br> VALLEY | AVERAGE | PARK <br> ACRES | POPULA- <br> TION | \# OF <br> PARKS | REGION |

## Regional Programming Comparison

Table 2-10 summarizes the types of classes or programs provided by the City compared to similar local agencies. This listing is based on a review of current recreation program guides. Additional programs listed outside of each agency's recreation program guides may be offered, but are not captured in this analysis.

In comparison to similar communities nearby, the City provides a diverse offering of programming activities that compares well to the types of programs offered in neighboring jurisdictions. For example, Moreno Valley offers programming that is not provided by most neighboring jurisdictions, such as adaptive and inclusive programs for persons with disabilities and virtual programs that can be attended remotely or from home.

As mentioned previously, one area that the City could improve is the provision of aquatics programming, which would require the construction of a new specialized facility or a partnership with another entity with an aquatic facility. An aquatic facility would require a feasibility study to determine community interest and desire for an aquatics facility, and if community demand is high enough, a decision to invest in the development.

TABLE 2-10: Program Comparison with Local Recreation and Parks Organizations

### 2.10.5 RECREATION STAFFING ANALYSIS

The City currently has 74 fulltime equivalent (FTE) staff in the Parks and Community Services Department. This includes divisions for Parks and Landscape Maintenance, Community Services (recreation), Special Events and Facilities (including sports), and Administration and Financial Services. For the purposes of programming, there are 28 FTEs with a focus on programming in the Community Services and Special Events Division.

In the analysis of programming for the City's parks and recre-
ation program, staffing levels were reviewed to determine if current program staffing meets established industry standards. The NRPA Agency Performance Review was used as the basis for the analysis. This analysis reviews parks and recreation agencies nationally and provides data sets based on qualifiers such as population and park acreage. This dataset is based on staffing percentages and total staffing in parks and recreation departments in a geographic region.

Using this data, comparable cities have between 42.78 (lowest quartile of agencies) and 144.15 (highest quartile of agencies)

FTE staff in their parks and recreation departments. Within this same dataset, there are between 14 (lowest quartile of agencies) and 47 (highest quartile of agencies) FTE staff dedicated to programming activities. Specific staffing levels are primarily dictated by the type and number of programs offered and must be continually adjusted to address programming modifications. The current programming staffing is within average staffing requirements for programming of similar parks and recreation agencies.

### 2.10.6 RECREATION FINANCIAL ANALYSIS

The City has budgeted approximately $\$ 10.5$ million for recreational activities, which translates to $\$ 50.40$ per capita. The City's primary sources of revenue for Parks and Recreation are:
" User Fees: These are fees charged by the Department for specific classes, programs, camps, and rentals offered within Moreno Valley. These generally help to fund employees, contract instructors, and basic program materials and supplies.
" Special Financing Districts: The City has several special financing districts, including Community Services Districts (CSDs) and Community Facilities Districts (CFDs). CSDs and CFDs are specialized limited funding sources that help pay for initial and ongoing costs for recreation and maintenance needs based upon a specific assessment amount. These districts are specifically assessed to residents of a specific geographic area and are only applicable to parks and recreation needs within that geographic area.
") Tax Revenue: This refers to property and sales tax revenue that is used to supplement funding that is not covered by the items aforementioned. It can be used for operations, staffing, and infrastructure as needed.
" Grants, Sponsorships, and Donations: This refers to grant funding, sponsorships, or direct donations provided to the Department to help fund specific programs or activities. These are not consistent annual streams, but typically more program or activity-generated revenue streams.

Together these revenue streams help fund the Department. The Department charges fees for a variety of services - youth sports, adult sports, golf, senior activities, and facility rentals. Figure 2-15 shows the types of revenue streams by major service areas that can help fund various services and programs.

As shown in Figure 2-15, more specific functional areas, such as contracted classes or facility rentals, can generally be user fee funded, whereas more community service-based programs, such as sports activities or youth camps, are funded by a mix of sources. While other services, such as cultural events or senior services, are primarily funded by tax revenues.

As the City continues to offer different programs, programming revenues should be evaluated on a program-by-program basis. Table 2-11 displays total revenues, expenditures, differences between revenues and expenditures, and the cost recovery percentages for each major spending category.

Overall, the City is only recovering approximately 18 percent of its costs or, in other words, under-recovering its costs by approximately $\$ 8.7$ million. Cost recovery and deficit vary by program area. For example, some areas have a higher cost recovery, such as Golf at 41 percent and Sports Programs at 78 percent, while other areas have low-cost recovery such as Community Events at 2 percent and Community Services at 3 percent. Maintenance activities typically are very low-cost recovery because revenues are not related to services provided.

FIGURE 2-15: Revenue Streams by Major Service Area

Primarily Funded by Tax Revenues

- Park/Facility

Maintenance

- Senior Services
- Cultural Events

Funded by a Mix of
User Fees, Taxes, and Other Sources

- Field Rentals
- Sports
- Youth Camps

The City has a detailed fee schedule and structure based on resident and non-resident rates, as well as extensive rental rates. While the City updated its fees in 2023, it should regularly review the fee structure to ensure that fees reflect the current program and rental facility popularity.

In addition to annual operating needs, the Department has a robust capital program dedicated to building new facilities and expanding and improving existing facilities. Capital projects are funded through CFDs, which are more project or geographic-specific. CFDs can help pay for both initial infrastructure costs, as well as the ongoing maintenance and operations of those facilities within the area.

Taxes and grants, along with sponsorships and donations, help fill the funding gaps needed for both operations and capital projects. While tax revenue is typically not restricted, grants and sponsorships, along with donations can be specific to programs and/or specific activity types. The City has done its best to utilize grant funding and donations to help offer programs. The City should continue to explore these opportunities and utilize alternative funding sources as appropriate.

### 2.11 RECREATION TRENDS

Recreation program trends can vary over time and may be influenced by changes in societal preferences, technology, and other factors. While the City already offers a diverse range of recreation programming, as trends continue to change over time, the City should continue to remain open to new concepts and adapt recreation programming to meet evolving community desires.

### 2.11.1 NATIONAL TRENDS

The 2023 Sports, Fitness, and Leisure Activities Topline Participation Report from the Sports and Fitness Industry Association (SFIA) highlights national recreation trends. The report indicates that participation in recreational activities in the U.S. has increased for the fifth consecutive year, rising 9.2 percent from 2017 and 1.9 percent from 2021. During 2022, 77.6 percent (236.9 million people) of United States residents participated in at least one recreational activity, roughly 20 million more people than in 2017. Now more than ever, people are prioritizing recreational activity and bouncing back from all-time lows recorded before the COVID-19 pandemic.

The number of totally inactive people decreased for the fourth consecutive year with 22.4 percent ( 68.6 million people) of United States residents being inactive. Inactivity in every single age group decreased, except for 18 to 24 -year-olds and 25 to 34 -year-olds, likely due to life changes brought on by the COVID-19 pandemic, like enrolling in college and having children. Similarly, inactivity rates
for every income level decreased by more than 3 percent in 2022, indicating that people are investing more in physical activity more than in previous years.

## Recreation Trend Highlights

» Pickleball continued to be the fastest-growing sport in America with participation almost doubling in 2022.
" Trail running and day hiking participation increased for the fifth consecutive year.
" Every racquet sport increased its participation from the previous year for the first time since 2015.
» Golf and tennis continue to maintain momentum with 9.7 and 4.3 percent participation increases in 2022, respectively. Both sports have grown over 20 percent since 2019.
" Basketball, soccer (outdoor), football (flag), and football (tackle) all saw three-year total participation increases of over 4.5 percent with basketball seeing the highest threeyear increase of 13.0 percent.
" Personal combat sports like martial arts, boxing for fitness, MMA for competition, MMA for fitness, and wrestling all posted participation increases in 2022.
» Barre and Pilates showed solid participation increases in 2022, while yoga decreased for the first time in the last decade. All have strong threeyear participation increases with yoga and Pilates increasing over 10 percent in the last three years.
" Camping, fishing, and bicycling activities recovered to 2020 participation levels after showing slight decreases in 2021.
" Group fitness-based activities continued to struggle, but showed some signs of recovery with boot camp style training, cardio kickboxing, and stationary cycling (group) experiencing participation increases in 2022.
") Health club-based activities continued to struggle. Elliptical motion/cross-trainer, stair-climbing machine, stationary cycling (recumbent/ upright), and weight resistance machines all had participation decreases last year, and are down over 10 percent compared to 2019 numbers.
" Most team sports displayed a significant decrease in regular/consistent participants while seeing significant increases in casual participation. Outdoor soccer was the only team sport that saw a participation increase in regular/consistent and casual participants.

See Table 2-12 to Table 2-17 for a closer look at national trends in the following areas:
») Fitness Sports Trends
") Team Sports Trends
» Individual Sports Trends
» Racquet Sport Trends
» Outdoor Activity Trends
" Winter Sports Trends

## Generational Trends in Recreational Activities

Activity participation and preferences tend to vary based on several demographic factors, but can also differ based on generational preferences. Figure 2-16 displays three-year participation categories across different generations. Overall, the top two most participated activity categories for every generation were fitness and outdoor sports.

Gen X (1965-1979)
At the peak of their careers and raising families, Gen X had the biggest participation increases in racquet, water, and team sports. Programming additional sports leagues would bring benefits to this age group.

## Gen Z (2000+)

Gen $Z$ is a tech-savvy generation with diverse interests. Gen Z participation increased the most in water and racquet sports, while overall participation in team sports is higher than all other generations.

FIGURE 2-16: Generational Trends in Activity

Baby Boomers (1945-1964)
Enjoying retirement, they are looking for opportunities in fitness, sports, outdoor activities, cultural events, and other activities that suit their lifestyles. In particular, Baby Boomers lead all other generations in increased participation in racquet sports.

## Millennials (1980-1999)

Millennials are a social and driven group with an interest in balancing wealth, work, and play. Similar to Gen X, Millennial participation increased the most in water, racquet, and team sports.

### 2.11.2 LOCAL TRENDS

## Household Participation in Team Sports

Figure 2-17 displays estimated sports participation in Moreno Valley based on data from ESRI Business Analyst. This data uses national propensities applied to local demographic composition to estimate the relative likelihood of adults and households in the specified trade area to exhibit certain consumer behavior. According to ESRI Business Analyst data, it is estimated that 27.8 percent of all sports participants in Moreno Valley participate in basketball, followed by 18.3 percent participating in soccer, and 14.2 percent participating in tennis. The top team sports played in Moreno Valley are similar to national trends. The SFIA report shows that nationally, basketball and soccer are two of the top five team sports based on participation numbers. Additionally, the two sports had the highest increases in participation over the last three years out of all team sports ( 13.0 and 9.3 percent, respectively), indicating that interest in these sports continues to grow nationally, as well as locally.

FIGURE 2-17: Estimated Team Sports Participation in Moreno Valley

[^33]
## Household Participation in Recreation

Figure 2-17 shows recreational activity participation in Moreno Valley based on data from ESRI Business Analyst. Walking for exercise is by far the most popular activity in Moreno Valley, followed by hiking, weight lifting, swimming, and jogging/running. Other recreational activities that ranked highly in Moreno Valley include road bicycling, yoga, and aerobics. Recreational activity trends in Moreno Valley indicate a high interest in physical fitness, which aligns with national trends. The SFIA report shows that the majority of active individuals in the U.S. participate in fitness sports (>65\%), compared to lower participation rates in individual, outdoor, racquet, team, water, and winter sports. The City can accommodate community interest in these recreational activities by increasing related amenities, such as trails, bicycle lanes, and outdoor exercise equipment, as well as related programming like fitness classes, guided hikes, group runs, and bicycle rides.

## COMMUNITY OUTREACH

### 3.1 COMMUNITY ENGAGEMENT OVERVIEW

Engaging Moreno Valley community members in the planning process was critical to the development of a Plan that accurately reflects community needs and desires. A comprehensive community engagement strategy was developed to facilitate a collaborative planning process and gather meaningful input from residents, stakeholders, and City staff. Outreach methods used to collect community input included community workshops, stakeholder meetings, a statistically valid survey, social media promotions, and online engagement through the City's website.

The target audience of community engagement efforts was anyone who lives, works, or plays within in Moreno Valley. Additional emphasis was placed on under-served communities that disproportionately lack easy and comfortable access to parks, open spaces, and other recreation facilities.

### 3.1.1 COMMUNITY ENGAGEMENT STRATEGY

The primary outreach methods used to engage Moreno Valley community members were:
" Project branding
") City website
" Social media
" Statistically-valid survey
" Three community workshops
Six focus group meetings with key stakeholders

### 3.2 PROJECT PUBLICITY

### 3.2.1 PROJECT BRANDING

Distinct branding was developed for the Plan to promote project familiarity throughout the planning process. A unique project logo and color palette was used for all outreach materials and presentations. The project branding was designed to maintain consistency with City branding, while also distinguishing the project as a new planning endeavor.

### 3.2.2 SOCIAL MEDIA

Social media was used throughout the development of the Plan to share information and invite community members to participate in a collaborative planning process. Regular social media posts were made to publicize the Plan, promote events and feedback opportunities, and share project updates.

MORENO VALLEY
M A S TER PL A N YOU ARE INVITED TO COMMUNITY WORKSHOP *2!

help shape the future of moreno valley PARKS, COMMUNITY SERVICES, AND TRAILS

### 3.3 COMMUNITY WORKSHOPS

Three community workshops were held between May 2023 and November 2023 to engage community members in a participatory planning process for the Plan. The workshops enabled community members to engage in the planning process and provide direct input on current and future park needs. Some items mentioned by participants in the workshops had not been captured by other forms of community engagement, which reinforces the importance of in-person participatory planning opportunities in reaching different audiences.

### 3.3.1 COMMUNITY WORKSHOP \#1: VISION, OPPORTUNITIES, CHALLENGES, AND EXISTING CONDITIONS

The first workshop was held on May 3, 2023, at the Moreno Valley Conference and Recreation Center. The workshop served as an official kick-off for the Plan. The planning team presented an overview of the planning process and initial findings from the citywide park inventory.

After the presentation, participants split into small groups to discuss the following topics:
" Current usage of existing parks
") General conditions of existing parks
" Overall satisfaction with current park experience
" Value placed on parks and recreation amenities
" Collective vision of the future park system
The most common comments from participants were related to the following topics:

1. Park Lighting and Safety
2. Park Connectivity and Safe Access
3. Nature and Open Space
4. Community Centers and Programming
5. Equestrian Facilities
6. Arts, Culture, and History
7. Park Maintenance
8. Additional Park Amenities

### 3.3.2 COMMUNITY WORKSHOP \#2: COMMUNITY PRIORITIES AND INFILL OPPORTUNITIES

The second workshop was held on September 26, 2023, at the Moreno Valley Conference and Recreation Center. The workshop began with a presentation of the results from the project's existing conditions analysis and the community survey. After the presentation, attendees participated in an interactive activity to collect input on desired parks and recreation facilities, amenities, and programming in Moreno Valley.

The top five amenities participants wanted to see at Moreno Valley parks were:

1. Community Gardens
2. Splashpad / Water Features
3. Outdoor Exercise Areas
4. New and Upgraded Playgrounds
5. Skate Parks

The top four amenities participants wanted to see at Moreno Valley trails were:

1. Signalized Intersections with Equestrian Push Buttons
2. Animal Crossing Signs
3. Fencing
4. Nature Center or Community Garden

### 3.3.3 COMMUNITY WORKSHOP \#3: DRAFT RECOMMENDATIONS

The third and final workshop was held on November 9, 2023, at the Moreno Valley Conference and Recreation Center. The planning team presented draft recommendations to the workshop participants in a public workshop setting. The team shared a summary of findings from the previous workshop activities and existing conditions analysis and then presented the draft recommendations. Participants were then given opportunities to provide feedback on and potential revisions to the draft recommendations through a series of open-house activities.

Workshop participants expressed the most interest in addressing the following four categories within the draft recommendations:
") Improvements to Equestrian Center
" Additional and Improved Trail Connections
" Interest in All-Inclusive Programming and Events
» Additional Facilities
Feedback related to improvements to the equestrian center includes the addition of intersections with light signals, a nature center, an outdoor stage/amphitheater, fencing, picnic areas, a community garden, a tot-lot near a dog park, natural trails, and designated maintenance staff.

Additional and improved trail connections were requested through comments that consisted of the desire for improved trails with pas-

sive parks, east-west trail connections in northern Moreno Valley, a greenway trail network around the city, SR-60 multi-use trail crossings, and north-south trail connections to link Lake Perris to the Moreno Valley Equestrian Center.

The interest in all-inclusive programming and events includes desires for an international film festival, new youth/teen programs, programs for people of all ability levels, and a community health/wellness center.

Lastly, community members expressed the need for additional facilities, such as a new library in the cen-tral-east area, a museum, a small-scale amphitheater, and a performing arts center.

### 3.4 STAKEHOLDER FOCUS GROUPS

Focus group meetings with key stakeholders were conducted during the summer of 2023. The goal of these meetings was to gather input on the needs and desires of target community groups. This input, in combination with other community feedback from the survey and workshops, was used to guide the recommendations provided in Chapter 4. A series of questions were asked during each of the stakeholder meetings and some of the collective themes and responses are summarized on the following page.

Six focus groups were convened to gather information from a broad cross-section of community members:

Arts and Library Commissions: Members of the City of Moreno Valley Arts Commission and City of Moreno Valley Library Commission.

City Leadership: Department heads and directors from the following City departments: City Manager's Office, Community Development, Economic Development, Fire, Parks and Community Services, and Public Works.

Parks and Community Services Department Staff: Staff from the City Parks and Community Services Department.

Parks, Community Services, and Trails Committee and Emerging Leaders Council: Members of the City of Moreno Valley Emerging Leaders Council and members of the City of Moreno Valley Parks, Community, and Trails Committee.

Senior Citizens' Advisory Board: Members of the City of Moreno Valley Senior Citizens' Advisory Board.

Youth Sports: Representatives from youth football, soccer, baseball, and softball leagues.

### 3.4.1 INFRASTRUCTURE QUESTIONS

1. Are there any current unmet needs in park facilities, civic facilities (libraries), or amenities?
" Sports fields and facilities need lighting, more regular maintenance, and additional parking.
" There is a lack of public indoor gathering spaces to host meetings, programs, and classes.
" Parks need additional and improved restrooms with cleaner facilities and more lighting.
" The existing library, senior center, and recreation centers are too small and lack sufficient amenities and meeting spaces.
2. What kind of facility needs do you anticipate in the future?
" Stakeholders expressed an overwhelming need for a new library, senior center, teen center, and multi-purpose recreation center
 to provide much-needed community spaces to host meetings, programs, and classes.
" Sports-related needs include a large sports complex, an aquatic facility, additional sports fields, and lighted fields.
" Other top needs include dog parks, splash pads, safe walking and bicycling routes to and from parks, larger and cleaner restrooms, and diverse park amenities to meet different community needs.
3. Are there underserved areas of Moreno Valley where the City should focus on park improvements/construction?
" The east and northeast portions of Moreno Valley are currently underserved and lack parks, sports fields, and open spaces.
4. Are there enough facilities and amenities for the diverse community in the City?
") Facilities and amenities are lacking for Moreno Valley teens, seniors, and community members with special needs.
5. Are there any trails or trailheads that the City should prioritize?
" Multi-use trails that provide safe connections to parks for pedestrians and bicyclists should be prioritized.
" Opportunities to create a connected trail system, particularly to the Juan Bautista de Anza Trail, should also be prioritized.
6. What are your top park/trail project recommendations?
" Top park and trail recommendations for new facilities include a large central library, large recreation center, large sports complex, large senior center, multi-purpose fields, an aquatic facility, dog parks, splash pads, and community gardens.
" Top park and trail recommendations for existing facilities include the addition of shade structures, picnic areas, BBQs, lighting, and restrooms to existing parks, as well as the remodeling of playgrounds to meet safety standards.

## 3．4．2 PROGRAMMING QUESTIONS

1．Are there any current unmet needs in recreation／library program－ ming？

》）More programming and meeting spaces are needed for teens， young adults，seniors，and community members with special needs．
＞＞Childcare programs are often full and are too expensive for some community members．

2．What programs would best service your family＇s future needs？
》 The following programs are desired：childcare，tutoring，adult literacy programs，multi－generational programs，pottery class－ es，van service for teens，and programs specifically for teens and seniors．

3．Are there any partnerships between the City and the community that can be created or strengthened？

》）The City＇s relationship with the Moreno Valley Unified School District could be strengthened to improve and add more Joint－ Use Agreements．

## Key Findings from Stakeholder Focus Group Meetings

Several common themes were repeated across focus groups，demonstrating consensus on a number of key desires and needs for Moreno Valley：

1
Desire for new large indoor facilities with diverse amenities and ample space to host meetings， programs，and classes（i．e．，Central Library，Teen Center，Senior Center，and Recreation Center）．

## 2

Desire for a large sports complex and an aquatic facility to meet the needs of residents and attract visitors from outside Moreno Valley．

Desire for better connectivity to parks through trails and safe routes．

Need for park and field lighting to increase safety and expand evening recreation opportunities．

## 5

Need for park restroom lighting，improved maintenance，and expanded capacity．

Need for diverse and multi－generational programming and amenities to accommodate differ－ ent interests and needs of the community．

East and northeast portions of Moreno Valley are underserved and in need of new parks and recreation facilities．

### 3.5 COMMUNITY SURVEY

Surveys were used to collect community input from residents and other park users on City parks, recreation facilities, amenities, future planning, communication, and more. The survey was designed to yield results that could assist the City in developing a plan that accurately reflects the needs, wants, and desires of the entire community. The survey results were analyzed and incorporated into the development of this Plan.

Two samples were collected in the survey effort:
" Statistically Valid Invite Sample (259): Paper surveys were mailed to a random sample of 4,500 residential households in Moreno Valley with instructions for how to complete the survey through a pass-word-protected web link. An additional 4,000 reminder postcards were also sent to encourage residents to take the survey. Out of the 4,500 paper surveys mailed to Moreno Valley households, 259 surveys were completed.
" Open Link Sample (218): An online survey was shared widely through social media, City newsletters, and other promotional activities with the intent to reach as many Moreno Valley residents as possible, as well as non-residents who may use Moreno Valley parks and recreation facilities. 218 Open Link surveys were completed online.

Together, the two samples provide a useful source of community input on Moreno Valley's existing parks and recreation facilities and programming, as well as the need for future improvements.

### 3.5.1 SURVEY RESULTS SUMMARY

Figure 3-1 to Figure 3-5 present a snapshot of survey results as a comparison of responses from both the Statistically Valid Invite (Invite) sample and the Open Link sample. In general, responses from the Invite sample are similar to those from the Open Link sample, which indicates a general consensus in the community on various park and recreation-related topics and ideas. Complete survey results are provided in Chapter 5.

FIGURE 3-1: Please rate how important the following recreation facilities and services are to your household. (On a scale of 1 to 5 , with 5 being "Very Important")

FIGURE 3-2: Please identify your household's priorities for recreation facilities, parks, programs, and special events to be added, expanded, or improved upon in Moreno Valley in the next 5 years. (On a scale of 1 to 5 , with 5 being "A Very High Priority")

FIGURE 3-3: What are the top priorities for improvement within our trail system? (Select Top 3)

FIGURE 3-4: What are the most important items that, if addressed by the City of Moreno Valley, would increase your use of parks and recreation facilities?

FIGURE 3-5: What will increase your household's use of Moreno Valley Parks and Community Services programs?

## Key Findings from Community Survey

Satisfaction: There are high ratings of satisfaction for the overall quality of Moreno Valley parks, facilities, recreation programs, and services. In particular, the Library and Special Events received average ratings of 3.7 and above on a scale of $1-5$, with 5 being "very satisfied."

Proximity: Most respondents live close to their most visited park. A total of 81 percent of the Invite sample and $68 \%$ of the Open Link sample say it takes less than 10 minutes to get to a park from their home.

Mode of Transportation: Most respondents drive a motor vehicle to get to the park they most frequently visit. However, 21 percent of the Invite sample report walking/running or rolling.

Most Used Facilities: Parks, trails and pathways, and the Recreation Center are the most frequently used facilities provided by the City.

Most Important Facilities: Community/neighborhood parks and open space/natural areas are the most important recreation facilities and services to both samples. However, their rating for meeting the needs of the community is lower than other facilities.

Top Ways to Increase Park Usage: The top three ways to help increase the usage of parks and recreation facilities are to improve safety and security, add more lighting, and enhance and maintain existing parks and facilities.

Future Priorities: The top future priorities for both samples are improved amenities, additional open space/natural areas/trails, and more community/neighborhood parks. When given a choice between natural resource preservation/protection and active recreation, respondents generally would prefer Moreno Valley pursue natural resource preservation/protection.

Trail System Priorities: Accessible walking trails and soft-surface hiking trails are the most important priorities for improvement within the City's trail system.

Program Participation: About a quarter (25 percent) of Invite respondents had participated in Moreno Valley Parks \& Community Services-led programs in the past 12 months. The top reason for participation in facility location.

Top Ways to Increase Program Participation: To help increase the use of Moreno Valley Parks \& Community Services programs, respondents prefer better condition/maintenance of parks or facilities and more programming opportunities that appeal to adults.

Communication: Respondents rated the communication efforts from Moreno Valley as moderately effective. The most preferred forms of communication for the Invite sample include the City's newsletters, Soaring Activity Guide, and emails.

### 3.6 KEY TRENDS FROM COMMUNITY ENGAGEMENT

## Workshop Trends

A permanent restroom building is strongly desired, as well as more amenities like picnic areas, outdoor fitness equipment, campsite, and community gardens.

Better trail connections are strongly desired, especially in the northwestern part and eastern parts of Moreno Valley, with a focus on connections to Lake Perris.

More programs for teens, seniors, and adults, as well as new special events are desired.

## Stakeholder Trends

New public centers like recreation centers, community centers, new senior centers are all desired.

Stakeholders would like to see a large sports complex to hold regional tournaments.

Lighting and additional safety features are wanted at parks and facilities.

## Survey Trends

Many survey respondents have a desire to improve the existing amenities at parks.

More access to open spaces, natural areas, and trails is strongly desired.

Additional community and neighborhood parks are desired.
 <br> \section*{\section*{CHAPTER <br> \section*{\section*{CHAPTER 04 04 <br> <br> RECOMMENDATIONS} <br> <br> RECOMMENDATIONS}

### 4.1 THE FUTURE OF MORENO VALLEY PARKS

The future of Moreno Valley's parks and recreation system will depend on actions that combine infrastructure, programming, and financial elements. This recommendations chapter begins with eight overarching initiatives that are intended to guide the City's efforts over the next ten years. Each initiative is supported by various objectives and actions that can assist with implementation.

The remaining recommendations in this Chapter are based on the findings from the existing conditions analysis, community engagement, and the comparative analyses described in the previous chapters of this Plan. These recommendations are also intended to be consistent with the Moreno Valley General Plan (2021).

## HOW TO USE INITIATIVES, OBJECTIVES, AND ACTIONS

## INITIATIVE

Initiatives represents an overarching topic related to parks and recreation.

## OBJECTIVE

Objectives provide direction to help create the positive change the City envisions.

## ACTION

Actions are well-defined steps needed to achieve objectives.

### 4.2 PLAN INITIATIVES

The Plan recommendations provide a clear set of goals for how Moreno Valley can continue to grow, plan, design, and implement park projects and programs into its park and recreation system. The eight initiatives are defined below.

## PARKS AND FACILITIES

TRAILS AND CONNECTIVITY

PROGRAMS AND SERVICES

MAINTENANCE

PLACEMAKING

ADMINISTRATIVE

FINANCIAL

SAFETY AND TECHNOLOGY

4.3 initiative ONE:

PARKS AND FACILITIES

Parks and recreation facilities are the foundation of Moreno Valley's Parks \& Community Services Department. Parks and recreation facilities are the physical locations that enhance the quality of life of residents. Although Moreno Valley is already home to a large number of parks, the City is encouraged to explore additional ways to maintain and enhance their park system. The City's demographics will continue to evolve and so will the recreation needs. The following objectives can help guide and prioritize physical infrastructure improvements throughout the City.

OBJECTIVE 1: Explore the improvement and equitable distribution of existing and future parks.

ACTION 1.1: Aim to maintain a standard/goal of three acres of parkland per 1,000 residents.

ACTION 1.2: Increase the acreage of parks in Moreno Valley to serve the needs of the growing and diverse population.

ACTION 1.3: Improve the planning process of developer-built parks to include park amenities with the highest deficits.

ACTION 1.4: Encourage public participation in the park planning process for amenities, facilities, and programming.

ACTION 1.5: Locate new neighborhood parks and open spaces along accessible bicycle and pedestrian routes.

ACTION 1.6: Prioritize new parks and open spaces in underserved neighborhoods.

ACTION 1.7: Coordinate with youth sports leagues, such as football and baseball, to improve or expand fields for tournaments to spurn participation and economic growth and return.

> OBJECTIVE 2: Expand existing and develop new parks and recreation facilities.

ACTION 2.1: Explore incorporating community gardens within parks to promote the production of local foods.

ACTION 2.2: Evaluate locations for the development of splash pads and other amenities for youth.

ACTION 2.3: Develop outdoor fitness spaces that would encourage activity and wellness among adults.

ACTION 2.4: Expand existing and develop new walking trails and recreational areas that promote outdoor fitness.

ACTION 2.5: Develop strategically placed open spaces to provide additional opportunities for community members to utilize Moreno Valley's outdoor areas.

OBJECTIVE 3: Improve the current offering of indoor facilities, recreation, and community centers.

ACTION 3.1: Identify underutilized areas within Moreno Valley's priority and underserved areas for the addition of new indoor facilities.

OBJECTIVE 4: Improve park maintenance for higher-quality parks.

ACTION 4.1: Encourage partnerships, such as "Beautify MoVal", for existing and future efforts to maintain and improve parks.

ACTION 4.2: Conduct a detailed facility conditions assessment to ensure each park includes features such as lighting, seating, and restrooms.

ACTION 4.3: Maintain an appropriate number of park maintenance staff to ensure clean and safe parks as much as possible.

## OBJECTIVE 5:

Integrate parks with new development projects.

ACTION 5.1: Integrate parks, trails, and public spaces into new residential developments to contribute to the livability of neighborhoods.

ACTION 5.2: New parks should be developed outside of the 65 decibel noise contour and require noise buffering if located near sensitive land uses.

ACTION 5.3: Parks, recreational facilities, and public spaces should be designed for future ease of maintenance.

ACTION 5.4: Landscape and site design measures help ensure the integration of safe parks and open spaces into adjacent development.

While physical park infrastructure is the foundation of a modern, robust, and diverse park system, programs and services are what bring parks to life. Programs allow community members to engage in fun and diverse physical and mental activities, learn new skills, socialize, and become involved members of the community. The Programs and Services Initiative aims to provide Moreno Valley with additional programs to meet the needs of the growing and evolving community.

OBJECTIVE 1: Provide recreation programs to accommodate the diverse interests, needs, ages, and cultural backgrounds of Moreno Valley residents.

ACTION 1.1: Develop additional programming for adults, such as sports activities and non-sport programs (yoga, meditation, arts and crafts, ballet classes, board games, etc.).

ACTION 1.2: Develop additional programming for teens like additional sports programs (ultimate frisbee, lacrosse, rugby, etc.) and non-sports programs (i.e., arts and crafts, field trips, BMX, etc.)

ACTION 1.3: Continue to implement non-traditional programs such as CPR, personal safety, and martial arts classes, with an emphasis on programs for adults and seniors.

ACTION 1.4: Expand indoor programming to provide alternative recreational options (board games, video games, karaoke, cultural workshops, arts and crafts, additional fitness classes, etc.).

ACTION 1.5: Engage with residents and stakeholders to identify additional programs that respond to growing or changing interests.

## OBJECTIVE 2: Promote community health and wellness through programs, services, and events.

ACTION 2.1: Continue to promote community health and active living through City-sponsored initiatives, events, and activities (i.e., Healthy MoVal, Community Demonstration Garden).

ACTION 2.2: Expand community education programs on healthy eating habits and lifestyles, including topics such as nutrition, physical activity, and vegetable gardening.

ACTION 2.3: Communicate through the libraries, Senior Community Center, and Teen SPOT (Support, Programs, Opportunities \& Technology) to provide informational resources about health.

ACTION 2.4: Collaborate with local health officials, nonprofit organizations, hospitals, health clinics, and community groups to provide programs and host events that promote health and wellness.

OBJECTIVE 3: Raise awareness of parks and recreation programs offered by the City.

ACTION 3.1: Promote broad awareness of the recreation opportunities offered in Moreno Valley through social media campaigns, email and mailed newsletters, word-of-mouth, posted flyers, paid advertisements, and other forms of targeted outreach.

ACTION 3.2: Provide recreation programs in a variety of locations to make participation convenient and accessible.

ACTION 3.3: Increase public awareness of youth programs in Moreno Valley through the development, maintenance, and promotion of a central directory of programs serving Moreno Valley youth.

ACTION 3.4: Increase youth program participation by expanding the number of Teen SPOT's available to low-income youth.

OBJECTIVE 4: Partner with public and private entities to provide programs and services that support families and meet the diverse needs of community members of all ages, backgrounds, and interests.

ACTION 4.1: Continue partnerships to provide access to aquatics programs, such as swim lessons and water aerobics classes.

ACTION 4.2: Develop partnerships with businesses, community organizations, and non-profits to supplement and sponsor City programs and events.

### 4.5 INITIATIVE THREE:

 PLACEMAKINGPlacemaking is a collaborative process that takes place between the government and community members to create public spaces that the community loves and feels connected to. Healthy placemaking ensures that the context of the local environment shines through the design and intent of the park or public space. The Placemaking Initiative encourages the celebration of community diversity, culture, local context, and history at parks and recreation facilities in Moreno Valley.

OBJECTIVE 1: Foster the use of arts and culture in the parks and trail systems.

ACTION 1.1: Encourage public art that represents the history, heritage, culture, and identity of Moreno Valley.

ACTION 1.2: Continue to collaborate and support local artists and students to create local art.

ACTION 1.3: Continue to utilize the Public Art Development Impact Fees to add art to public property throughout the city.

ACTION 1.4: Gather public and private resources for future funding that can support visual and performing arts, as well as cultural development goals and activities.

ACTION 1.5: Locate areas at City parks and trails for opportunities for art installations.

## OBJECTIVE 2: Build a unique sense of place and pride in Moreno Valley parks and trails.

ACTION 2.1: Create design guidelines for streetscape design, signage, lighting, and building materials.

ACTION 2.2: Design unique architectural elements or entry towers for key intersections, gateways, or park/trail entrances.

ACTION 2.3: Incorporate unique traits of Moreno Valley into park and trail identity.

ACTION 2.4: Integrate social gathering places such as plazas and amphitheaters into new and existing parks.

ACTION 2.5: Ensure new park amenities or features reflect the surrounding neighborhood character.

## OBJECTIVE 3: Celebrate the history of Moreno Valley.

ACTION 3.1: Recognize historic structures and sites in the city as historic places.

ACTION 3.2: Use historic artifacts as inspiration for placemaking items or themes at parks.

### 4.6 INITIATIVE FOUR

 MAINTENANCEIt is not possible to achieve a high-quality park and recreation system without a team of passionate maintenance staff and an efficient maintenance system. Regularly maintained parks increase park use and overall community satisfaction. The Maintenance Initiative aims to increase the efficiency and skills of the park and recreation maintenance staff to increase the overall quality of parks.

OBJECTIVE 1:
Maintain high-quality parks and recreation facilities through better park maintenance and operations.

ACTION 1.1: The City should develop minimum service levels and standards for park maintenance and develop a program to document them.

ACTION 1.2: Contracts for services should use the minimum service levels as specifications for work.

OBJECTIVE 2: Invest in City parks by investing in City maintenance staff.

ACTION 2.1: Add a parks maintenance inspector for daily documentation and review of maintenance contract performance and to monitor maintenance needs throughout the city.

ACTION 2.2: Invest time for staff training on maintenance standards and specialty maintenance areas, such as irrigation management and playground inspection, to increase capacity and skillsets and provide cross-coverage for maintenance operations.

ACTION 2.3: Add an additional parks maintenance staff member to assist in diamond field maintenance.

ACTION 2.4: Additional support through contracted services or an additional staff position (minimum 0.5 FTE) is necessary to maintain the potential seven new parks recommended in the following sections.

OBJECTIVE 3: Utilize modern technology to increase maintenance efficiency.

ACTION 3.1: Using City GIS data, procure and implement a computerized maintenance and asset management system to manage and regulate work and document coverage.

ACTION 3.2: Integrate contracted and in-house maintenance operations into this system to document needs and guide the City's Parks Rehabilitation \& Refurbishment Program in the future.

### 4.7 INITIATIVE FIVE:

## TRAILS AND CONNECTIVITY

Providing a safe, comfortable, and convenient trails network between parks, schools, and residential areas is the key to making parks and facilities more accessible to the community. Residents are more likely to walk, bike, or ride their horses to these community facilities when there is a safe and pleasant route to do so. The Trails and Connectivity Initiative aims to give the City the means to create infrastructure to better connect residents to parks, improve the trail system in Moreno Valley, and promote active transportation.

OBJECTIVE 1: Explore opportunities to increase equestrian trails and amenities.

ACTION 1.1: Ensure existing and future staging areas can accommodate quality amenities (restrooms, parking, interactive kiosks, security cameras, wayfinding, etc.).

ACTION 1.2: Provide sufficient resources for the maintenance of trails and staging areas through a combination of grant funding, City resources, and volunteer efforts.

ACTION 1.3: Work with community members to plan and develop trail infrastructure, such as enhanced crossings, closing gaps, lighting, and wayfinding.

ACTION 1.4: Explore installing a traffic signal at Redlands Boulevard and Locust Avenue for safer pedestrian and equestrian crossing.

ACTION 1.5: Coordinate with Riverside County to connect trails through Reche Canyon between the Sunnymead Ranch Staging Area and the Moreno Valley Equestrian Staging Area.

ACTION 1.6: Coordinate with public and private entities to link regional open spaces with a network of paths and trails, including connections to Moreno Valley's multi-use trail system.

## OBJECTIVE 2: Enhance connections and entry points into parks, trails, and open spaces.

ACTION 2.1: Explore installing curb ramps and closing gaps along sidewalks within a quarter mile of parks, trails, and open spaces.

ACTION 2.2: Improve or create new access points to trails from neighborhoods, where appropriate.

ACTION 2.3: Expand Moreno Valley's network of multi-use trails and provide connections from residential and commercial areas.

ACTION 2.4: Incorporate wayfinding, entry monuments, security cameras, signage, and educational kiosks at trail entry points and staging areas to encourage trail use.

ACTION 2.5: Explore programs that connect equestrian riders to future multi-purpose trails within Moreno Valley.

ACTION 2.6: Consider adding ADA-accessible trails.

OBJECTIVE 3: Create walkable and bike-friendly networks that lead to parks and trails.

ACTION 3.1: Provide more walking trails and enhance the existing trails to promote health and wellness.

ACTION 3.2: Implement traffic calming elements on streets that create a bicycle and pedes-trian-friendly environment to trails and parks.

ACTION 3.3: Explore the potential for off-street trails and non-motorized connections between parks and Moreno Valley's existing multi-use trail system.

Photo credits to Moreno Valley Trailseekers

### 4.8 INITIATIVE SIX:

 ADMINISTRATIVEPassionate, innovative, and efficient City staff provide the park system with the tools it needs to be successful. City staff perform essential administrative tasks that determine the success of programs, special events, parks, and facilities. The Administrative Initiative is intended to improve the effectiveness and efficiency of the City's Parks and Community Services Department to better serve the needs of the growing community.

OBJECTIVE 1: Increase overall community satisfaction with the parks and recreation system.

ACTION 1.1: Conduct park user and program participant satisfaction surveys quarterly or semi-annually to address issues and highlight successes promptly.

OBJECTIVE 2: Enhance the park user experience by considering infrastructure enhancements.

ACTION 2.1: Increase facility usage by installing lighting to allow for park use beyond daylight hours.

ACTION 2.2: Continue to improve the overall maintenance program. This will allow for continuous improvement of equipment, maintenance, and park cleanliness (i.e., establish janitorial and maintenance plans to address issues promptly and consistently).

> OBJECTIVE 3: Develop partnerships to improve and expand access to parks and recreation facilities.

ACTION 3.1: Work with Moreno Valley Unified School District and Val Verde Unified School District to expand the shared use of parks and recreational facilities.

ACTION 3.2: Develop relationships with local businesses, clubs, and organizations to seek funding, volunteers, and marketing support to expand programs and facilities.

ACTION 3.3: Recruit volunteers to help operate and run programs.

ACTION 3.4: Review current contacts with partners and seek out new public/private partnerships to enhance amenities.

ACTION 3.5: Identify partnerships with other organizations that can provide additional programming space where needed.

ACTION 3.6: Update and expand joint-use agreements with local school districts.

ACTION 3.7: Generate partnerships with organizations that can help with park maintenance and clean-up.

ACTION 3.8: Evaluate land for potential purchase and re-purposing as parkland.
OBJECTIVE 4: Staff appropriately to meet current demand and maintain established quality service.

ACTION 4.1: Align staffing levels with future park, facility, and programming enhancements.

ACTION 4.2: Identify current performance standards.

ACTION 4.3: Assess the need for additional maintenance staff, program staff, and resources at the seven potential new parks and other upgraded facilities.

# 4.9 INITIATIVE SEVEN: FINANCIAL 

ACTION 2.3: Consider allocating additional City funds towards community events and programming to encourage more community members to use the park system.

ACTION 2.4: Develop targeted cost recovery policies based on program areas (rentals 80-100\%, youth sports $20-50 \%$, etc.)

ACTION 2.5: Continue to evaluate existing fee levels on an annual basis to allow for increased cost recovery.

ACTION 2.6: Capture indirect costs when setting fees to allow for full cost recovery on programs.

ACTION 2.7: Consider creating a parks and recreation-specific Impact fee applicable to residential projects to allow for a dedicated capital funding source.

ACTION 2.8: Explore the creation of CFD(s) for new park facilities being proposed to help offset general fund costs.

ACTION 1.5: Expand the use of grants and sponsorships to subsidize and offset costs of community benefit programs.
ing additional City funds to the
ACTION 1.6: Evaluate the use of additional contracted services for Cottonwood Golf Center and other programs to allow for more cost-effective use of city resources.

ACTION 1.7: Continue tracking NRPA, CRNA, OGALS, LWCF, CRPS, American Trails, and Education in Arts for grants.

ACTION 1.8: Utilize NRPA's Foundation Center for links to thousands of grant opportunities, grant education, and training.

OBJECTIVE 2: Assess existing funding sources and structures to identify opportunities for improvement.

ACTION 2.1: Periodically assess in-lieu parkland dedication fees, park improvement impact fees, and other fees and charges to ensure they are adequately providing for community need and are competitive within the region.

ACTION 2.2: Consider dedicatmaintenance of parks.

### 4.10 INITIATIVE EIGHT:

SAFETY AND TECHNOLOGY

Developing the use of more technological resources at parks and facilities can help improve the overall park and recreation system. The Safety and Technology Initiative's goal is to provide the City with actions to address park safety concerns through the utilization of technology and park design best practices.

## OBJECTIVE 1: Develop and use technology within parks and recreation facilities and programs.

ACTION 1.1: Offer video crime reporting services that allow residents to contact the Moreno Valley Police Department and interact with officers in real time.

ACTION 1.2: Facilitate installment of advanced technology infrastructure for high-speed internet access and solar energy at parks.

ACTION 1.3: Continue the implementation of Wi-Fi technology, or Wi-Fi gardens, at all Moreno Valley parks.

ACTION 1.4: Increase the use of security cameras at parks and trailheads where safety concerns and other issues have been mentioned.

ACTION 1.5: Utilize blue light emergency phone towers at parks and trails that can provide communication in times of emergencies.

ACTION 1.6: Develop digital methods to reach community members and increase awareness of City programs and events (smartphone app, push notifications, etc.).

## OBJECTIVE 2: <br> Promote safety and security at Moreno Valley parks and recreation facilities.

ACTION 2.1: Collaborate with the Police Department to invest in strategically placed cameras to better promote a sense of security throughout the parks.

ACTION 2.2: Coordinate with the Police Department to increase the police presence throughout the parks, especially in areas where incidents and crime have been reported.

ACTION 2.3: Install time-controlled or automatic lighting for better visibility and easily accessible emergency phones throughout parks and open spaces to increase safety.

OBJECTIVE 3:
Implement safety and accessibility design guidelines for parks and services.

ACTION 3.1: Design new parks with natural surveillance features, such as strategically placing physical features and activities to maximize the visibility of surrounding activity.

ACTION 3.2: Incorporate ADA accessibility at all parks and facilities.

ACTION 3.3: Establish and integrate safe and highly visible crosswalks, playgrounds, and bicycle access away from main streets.

ACTION 3.4: Incorporate vegetation and fencing as a buffer zone from vehicles.

OBJECTIVE 4: Use park features to increase park safety.

ACTION 4.1: Increase lighting in all Moreno Valley Parks, paths, and low visibility areas.

ACTION 4.2: Maintain all park restroom facilities and install self-locking doors to reduce unauthorized use after hours.

OBJECTIVE 5: Offer opportunities for virtual programs, events, and activities.

ACTION 5.1: Explore additional programs and activities that can be supported through virtual classes such as those in the City's CLIC (Community Learning Internet Connectivity) initiative.

ACTION 5.2: Assess if any existing recreational programs can additionally be held as virtual classes to reach a broader audience.

## OBJECTIVE 6:

Continue developing Moreno Valley's GIS databases.

ACTION 6.1: Continue to build the City's GIS database for all of the City's mapped parks, park amenities, and trails data.

ACTION 6.2: Continue working with the Police Department to collect and map crime data to monitor safety issues.

### 4.11 FUTURE LEVEL OF SERVICE WITH EXISTING PARK SYSTEM

The population of Moreno Valley is projected to grow significantly by the year 2045 due to expected economic growth and development, bringing physical and demographic changes to the city. The population is expected to grow by 29.7 percent to a total of about 266,800 and the number of employment opportunities is expected to nearly double, increasing from 35,500 to about 65,000 . These changes will bring new needs to the City's parks and recreation system. It is assumed that the new population will use the City's existing parks and facilities, which will add demand to the existing park system. This section analyzes how the projected growth will impact the City's parks and recreation system and identify where park acreage and amenity deficits are expected to increase.

### 4.11.1 FUTURE POPULATION-BASED LEVEL OF SERVICE

The projected population growth will also bring changes to the population LOS by the year 2045. If no new parks were to be added to the City's park and recreation system by the year 2045, the park acres per 1,000 residents would decrease to -1.46 park acres per 1,000 residents, leaving the City 389 park acres short of reaching its goal of 3 park acres for every 1,000 residents (Table 4-1). The City will require additional parkland to address its current park deficit and to prepare for future population growth.

TABLE 4-1: Future Population LOS

| 2045 LOS | ALL CITY PARKS |
| :--- | :---: |
| Existing Park Acreage | 411.16 |
| Recommended Adopted Standard <br> per 1,000 Population | 3.00 |
| Acres per 1,000 Population (2045) | 1.54 |
| Total Surplus/Deficit Acres per 1,000 <br> Population (2045) | -1.46 |
| Acres in Deficit | 389.25 |

### 4.11.2 FUTURE PARK AMENITY LEVEL OF SERVICE

Table 4-2 uses the 2045 population projection to determine future amenity surpluses and deficits in the overall park system. Using the future population projections, all of the amenity deficits increase. Table 4-2 assumes that the City does not add additional park amenities between now and 2045. Every amenity will be in a deficit by the year 2045 if the City does not add new amenities. This analysis highlights the need for additional park amenities at existing parks and for new parks to be more highly-amenitized for more efficient use of space at parks.

Section 4.13 of this chapter identifies potential opportunity areas at each park and recommended amenities for each existing park site.

TABLE 4-2: 2021 and 2045 Amenity Level of Service

### 4.12 FUTURE PARK AND TRAIL RECOMMENDATIONS

Many areas throughout Moreno Valley are undeveloped, a unique and advantageous scenario for a city of this size. The following section identifies seven potential sites that can be developed into future parks. These sites are located on City-owned vacant properties or on properties slated for redevelopment. The sites vary in size, from 7 acres to 43 acres, but they have the opportunity to offer residents a variety of park amenities that can address the existing park access and amenity deficits discussed in Chapter 2.

The City will need to develop individual park master plans to properly identify the challenges and opportunities each site offers. Through this process, the City will be able to design community-driven park master plans that reflect the unique character of the neighborhood, address missing park amenities, recognize the importance of maintaining open space, and assess unique challenges such as the protection of wildlife, sensitive habitats, or historical resources.

### 4.12.1 PARK RECOMMENDATIONS

## Park A - Marlborough Property 43.2 acres

This park site is located in the northern region of the city off Perris Boulevard. This park site was previously identified in the Moreno Valley General Plan (2021) and could potentially add up to 43.2 acres to the existing park system. The terrain at this site varies but provides a great opportunity to design a large, passive park that has amenities and features such as trails, picnic areas, playgrounds, gardens, outdoor exercise equipment, educational spaces, or habitat restoration areas.

## Park B - Moreno Valley Mall Redevelopment Park-5.52 acres

The existing Moreno Valley Mall is slated to undergo redevelopment in the future. This is an opportunity to design a park space that is approximately 5 acres in size. A new park in this location would provide residents and shopping mall visitors a fun and unique recreation opportunity. Park amenities such as playgrounds, splash pads, picnic areas, or educational spaces can be incorporated. Redesigning shopping malls to include park elements has been a strategy many cities and developers have
used in the past decade. This strategy has resulted in positive outcomes for both the owner of the site and the residents that get to spend time in these spaces.

## Park C - Ironwood Ave and Davis St-12.8 acres

This site is located off Davis Street, just south of Ironwood Avenue. This 12.8-acre site could potentially provide a variety of new park amenities that would benefit the surrounding neighborhood and the City at large. The terrain is relatively flat which allows for an easier approach to designing amenities such as sports courts and fields, playgrounds, picnic areas, walking paths, a restroom building, and outdoor exercise equipment.

## Park D - Alessandro Blvd and Day St / Edgemont-8.2 acres

This City-owned vacant land is located off Alessandro Boulevard and Day Street. The surrounding neighborhood is one of the oldest in the City and residents currently do not have access to a park that is within a half-mile. A new park in this neighborhood would provide residents access to amenities such as a playground, picnic areas, court sports, walking path, splash pad, or outdoor exercise equipment.

## Park E - Cottonwood Ave and Perris Blvd-9.24 acres

This park site is located off Cottonwood Avenue, just east of Perris Boulevard. This 9.24-acre site can provide residents from the surrounding neighborhood access to a variety of park amenities such as a playground, picnic areas, court sports, walking path, a couple of youth-sized sports fields, or outdoor exercise equipment.

## Park F - Morrison Park Expan-sion-7.0 acres

Developing the open land located southwest of Morrison Park will help expand access to new amenities. Specific recommendations are identified in Section 4.13.13 of this chapter.

## Park G - Redlands Blvd and Brodiaea Ave - 8.19 acres

This site is located off Redlands Boulevard and Brodiaea Avenue. This 8.19 -acre site is relative-ly-flat, open space that would allow the City to design amenities such as sports courts, a couple of youth-sized fields, a playground, picnic areas, walking paths, a restroom building, and outdoor exercise equipment. Wayfinding and interpretive signage would also help residents learn about the surrounding open space and trail opportunities.

### 4.12.2 TRAIL RECOMMENDATIONS

The trails shown in Figure 4-2 are the proposed multi-use trails that build upon the City's Bicycle Master Plan (BMP) (2014), MoVal 2040 General Plan, Master Plan of Trails (2018), and World Logistics Center Specific Plan (2014). Many of these proposed trails connect to existing parks and open space, providing additional forms of transportation and helping close gaps in the existing trails network.

The proposed trails are either paved Class 1 multi-use trails, such as the Juan Bautista de Anza, or natural surface trails that can be used by bicyclists, pedestrians and equestrians. Many of these trails are located near the perimeter of the City's boundary and connect to regional destinations such as Box

Springs Mountain Reserve, Lake Perris Recreation Area, Riverside County open space, and the San Jacinto Wildlife Area.

The recommended multi-use trails are meant to connect to other existing trails, such as the Juan Bautista de Anza trail, and to close gaps such as between Rancho Verde High School and Moreno Valley College along the perimeter of Lake Perris Recreation Area. These types of trails could provide both recreational and commuting forms of travel for residents to enjoy.

The City and the surrounding area are home to unique resources and trails to these open spaces can showcase the local geology, landform, and habitats. For example, Box Springs Mountain Reserve provides incredible views of the region while Lake Perris provides access aquatic recreation.

It is important to note a large open space area that is located in the northern area of the city. Donkeyland Rescue is a nonprofit organization that is dedicated to protecting wild burros and their habitats. Their private property creates a large east-towest barrier for those wishing to connect to City destinations via trails. There have been previous attempts to develop nature trails through this property that strike a balance between providing access to open space areas in Riverside County while protecting the goals of Donkeyland Rescue. The City is encouraged to continue conversations with Donkeyland Rescue to determine the best strategies to develop trails that respect each others' initiatives.

### 4.13 OPPORTUNITY AREA ANALYSIS

Making efficient use of existing park space is incredibly important when designing or redesigning parks. This section identifies underutilized park areas within existing parks and suggests recommended amenities for these infill areas. If these recommendations were to be implemented, the City could help address amenity deficits identified in Chapter 2 and help fulfill additional needs identified by the community.

### 4.13.1 OPPORTUNITY AREAS ANALYSIS

The opportunity area analysis determines undeveloped or underutilized areas within a park and suggests park amenities that can potentially fit based on the square footage of the area. Each park with an opportunity area is shown alongside a table of potential amenities, supporting text, and a key map highlighting potential recommendations. The table identifies what kinds of amenities can approximately fit in the opportunity areas based on square footage and dimensions.

The amenities with an " $X$ " indicate a need based on park amenity deficits and geographic distribution of park amenities identified in Chapter 2. The amenities listed at the top of each table (highlighted with a star) are based on community input and the analysis completed in chapter two of this Plan. The City is encouraged to explore the best options for each park and is expected to use this section of the Plan as a guide to determine which amenities to design and construct over the next ten years.

Parks with no opportunity areas and therefore not included in this analysis are Civic Center Amphitheater and Park, Fairway Park, Hidden Springs Passive Nature Park, Lasselle Sports Park, March Field Park, and Santiago Park.

## Public Input on Opportunity Areas

Giving residents an opportunity to share their ideas for potential new park amenities at these opportunity areas was a priority during the community engagement process. Participants at the second workshop were given the opportunity to vote on their most desired amenities. These votes were tallied and integrated into the final amenity recommendations for each opportunity area.

### 4.13.2 ADRIENNE MITCHELL MEMORIAL PARK OPPORTUNITY ANALYSIS

Adrienne Mitchell Memorial Park is a neighborhood park located in the eastern area of the city. The existing amenities include a playground, tot-lot, basketball half-court, walking loop, group picnic area, and horseshoe pit. Although this park has several amenities already, there are spaces for additional amenities.

There are three opportunity areas at this park: a large grassy area in the center of the park and two other areas on the southeast corner of the park. According to votes at the second community workshop, the top five park amenities recommended at this park are restrooms, community garden, youth rectangular soccer field, outdoor exercise stations along the walking path, and a skate park.

### 4.13.3 BAY SIDE PARK OPPORTUNITY ANALYSIS

Bay Side Park is adjacent to a grocery market and a residential neighborhood. It is a large rectangular park in the northwestern part of Moreno Valley. Existing amenities in the park include a playground, basketball halfcourt, a walking trail through the park, a shaded picnic area, and an open grass area.

Three opportunity areas at this park were identified: one in the western portion and two additional areas in the eastern and central portions of the park. The top five amenities recommended for the park are an upgrade to the existing playground, a tot-lot playground, larger group picnic areas, a community garden, and splashpads/water play features.

### 4.13.4 BETHUNE PARK OPPORTUNITY ANALYSIS

Bethune Park is located in the southern edge of Moreno Valley within a residential area and adjacent to Mary McLeod Bethune Elementary. Included within the boundaries of the park are a snack bar, a playground, two tennis courts, a shaded picnic area, a barbecue station, and a splash pad area. A joint-use agreement exists between the City and the Elementary School that allows public use of two baseball/softball fields adjacent to and separated from the park by a gate and a fence.

The opportunity areas of the park are in its southernmost eastern and western portions. Based on community feedback, the four recommended amenities are a multi-purpose field, basketball half-court or full-sized court, outdoor exercise area, and youth rectangular soccer field.

| Pickleball | 1,800 | x | x | x |

### 4.13.5 CELEBRATION PARK OPPORTUNITY ANALYSIS

Located in the eastern side of Moreno Valley next to Landmark Middle School, Celebration Park offers amenities such as shaded picnic areas, a playground area, a basketball half-court, a splash pad, a large grassy open space, and a walking loop with picnic tables and seating areas.

Four opportunity areas identified exist within the walking loop of the park. According to community workshop feedback, the most desired amenities are a pickleball court, outdoor exercise area, full-sized basketball court, and community garden.

FIGURE 4-6: Celebration Park Opportunity Areas

*Note: Pickleball is highly recommended at Celebration Park at Infill Area 3 due to its far proximity from residential areas, reducing the likelihood for noise complaints from residents. Additional parking may be necessary.

TABLE 4-6: Celebration Park Recommended Infill Amenities

| RECOMMENDED AMENITIES FOR INFILL | TYPICAL SF | $\begin{aligned} & \text { AREA 1: } \\ & 25,490 \end{aligned}$ | $\begin{aligned} & \text { AREA 2: } \\ & 28,940 \end{aligned}$ | $\begin{aligned} & \text { AREA 3: } \\ & 29,660 \end{aligned}$ | $\begin{aligned} & \text { AREA 4: } \\ & 23,260 \end{aligned}$ |

### 4.13.6 COLLEGE PARK OPPORTUNITY ANALYSIS

College Park is located on the east side of Moreno Valley, directly next to Moreno Valley Community College. It is a 25acre community park that offers a playground and a large grassy open space with two soccer fields. A segment of a natural surface multi-use trail also passes along the southeast edge of the park.

Three opportunity areas were identified between existing amenities. Recommended amenities for College Park include an amphitheater/outdoor stage, restrooms, an upgraded playground, and a parking lot since it currently lacks parking.

FIGURE 4-7: College Park Opportunity Areas

| RECOMMENDED AMENITIES FOR INFILL | TYPICAL SF | AREA 1: $35,340$ | $\begin{aligned} & \text { AREA 2: } \\ & 32,300 \end{aligned}$ | AREA 3: $28,000$ |

| Parking | Varies | x | x | x |

TABLE 4-7: College Park Recommended Infill Amenities

### 4.13.7 EL POTRERO PARK OPPORTUNITY ANALYSIS

El Potrero Park is a 15 -acre community park located in the south end of the city near El Potrero Elementary and Bethune Park. The park is bisected by a canal but connected by a bridge that is part of the park's existing walking path. Amenities at the park include four multi-purpose athletic fields, a soccer field, a playground, picnic tables with barbecues, fitness equipment, restrooms, and a walking path.

Two opportunity areas were identified in the northeastern side of the park facing a residential area. The top amenities identified with the help of the community are an upgraded playground, group picnic areas, walking loop, basketball court, tennis court, pickleball court, and additional outdoor exercise stations.

### 4.13.8 GATEWAY PARK OPPORTUNITY ANALYSIS

Gateway Park is located in a residential neighborhood on the north end of the city. The park connects the neighborhood to Sunnymead Linear Park at the center of the city. Existing amenities include a playground, large grassy open space lined with trees, restroom, and picnic tables.

Four opportunity areas were identified in the center and south side of the park. Recommended amenities from public feedback are a dog park, basketball court, tennis court, community garden, skate park, and outdoor exercise area.

| Multi-purpose Field | 30,000-95,000 |  | x |  |  |

### 4.13.9 HIDDEN SPRINGS PARK OPPORTUNITY ANALYSIS

Hidden Springs Park is in a residential neighborhood on the northern edge of the city, adjacent to Hidden Springs Elementary School. The park has a small grassy open space with two youth-sized backstops, a playground that is to be renovated, and access to nearby trails.

One opportunity area was identified close to the Hidden Springs Elementary School boundary. The recommended amenities desired by the community are a walking loop, group picnic areas, a restroom building, tennis courts, pickleball courts, and an outdoor exercise area.

### 4.13.10 JOHN F. KENNEDY MEMORIAL PARK OPPORTUNITY ANALYSIS

John F. Kennedy Memorial Park is a neighborhood park in the southern-central area of the city at the intersection of Indian Street and John F. Kennedy Drive. The Riverside County Fire Station is located within the park. Park amenities include an adult baseball/softball field with lighting, open grassy areas, a playground area, an outdoor exercise area, shaded picnic tables, and four illuminated tennis courts.

Four opportunity areas were identified at the park with two areas along John F. Kennedy Drive and two along Indian Street. The amenities most desired by community members are a basketball court, pickleball courts, and an updated playground.

FIGURE 4-11: John F. Kennedy Memorial Park Opportunity Areas

### 4.13.11 MORENO VALLEY COMMUNITY PARK OPPORTUNITY ANALYSIS

Moreno Valley Community Park is a community park found on the central-west area of the city adjacent to Moreno Valley High School. The park currently has four lighted soccer fields, a playground, picnic tables, a walking path, shaded picnic areas, and a skate park.

Four opportunity areas were identified in the southern portion of the park. Amenities desired by community members include a group picnic area, an upgraded playground, a tot-lot playground, a splashpad/water play feature, outdoor exercise areas, pickleball courts, tennis courts, basketball courts, and volleyball courts.

### 4.13.12 MORENO VALLEY EQUESTRIAN PARK AND NATURE CENTER OPPORTUNITY ANALYSIS

Moreno Valley Equestrian Park and Nature Center is a 45-acre special use facility located in the northeast corner of the city. The equestrian park within the park contains an arena and pens. The park also includes Hound Dog Park, which contains a dog park with separated areas for small and larger dogs, as well as some agility equipment.

Four opportunity areas exist in the park. Recommended amenities include equestrian trails and connections to outside trails, group picnic areas, restrooms, outdoor exercise areas, and an overnight horse camping area for visitors traveling to Moreno Valley for events at the equestrian park. The City is also encouraged to explore adding a nature center building as suggested in previous planning efforts.

### 4.13.13 MORRISON PARK OPPORTUNITY ANALYSIS

Morrison Park is at the heart of Moreno Valley and along the same street as Mountain View Middle School and Valley View High School. The park's primary use is as a baseball/softball park as it offers baseball/softball fields, restrooms, a snack bar, picnic tables with barbecues, and a large grassy area next to the fields.

Four opportunity areas were identified at the park. Community feedback was used to develop the following recommended amenities: a dog park (being considered by the City), a skate park, a group picnic area, a playground, a tot-lot playground, a pump track, a walking loop, a basketball court, a volleyball court, a tennis court, and a pickleball court. Areas one, two, and four offer great potential for a pump track due to their varied terrain.

### 4.13.14 PATRIOT PARK OPPORTUNITY ANALYSIS

Patriot Park is a mini park located on the south side of the city. Amenities include a walking path around the perimeter of the park and a playground area.

The infill opportunity area analysis helped pinpoint an opportunity area on the west half of the park. Community feedback indicated that the top three desired are an outdoor exercise area, a basketball half-court, and a group picnic area. The infill opportunity area is fairly small, but offers a great opportunity to reduce the city's basketball amenity deficit and geographic gap by adding one at this park.

FIGURE 4-15: Patriot Park Opportunity Areas

TABLE 4-15: Patriot Park Recommended Infill Amenities

| RECOMMENDED AMENITIES FOR INFILL | TYPICAL SF | $\begin{gathered} \text { AREA 1: } \\ 6,488 \end{gathered}$ |
| :---: | :---: | :---: |
| Outdoor Exercise Area | 500-2,000 | x |

| Volleyball | 4,000 | x |
| Pickleball | 1,800 | x |

### 4.13.15 PARQUE AMISTAD OPPORTUNITY ANALYSIS

Parque Amistad is a passive neighborhood park with basic amenities located in the southeast area of Moreno Valley. Existing amenities include a playground, a picnic area, two basketball half-courts, and a softball/baseball backstop.

One opportunity area was identified on the west side of the park along Caballo Road. Recommended amenities include a tennis court, a pickleball court, an outdoor exercise area, group picnic areas, and a basketball court.

FIGURE 4-16: Parque Amistad Opportunity Areas

| Walking Loop | varies | x |

### 4.13.16 PEDRORENA PARK OPPORTUNITY ANALYSIS

Pedrorena Park is located in the southeast part of the city and contains active and passive recreational amenities. Active recreational amenities include a basketball court, four tennis courts, a playground area, and an open grassy area with a baseball/softball backstop. Passive amenities include two picnic areas with barbecue grills.

Three opportunity areas were identified in the north and southwestern areas of the park. The amenities most desired by workshop participants are an upgraded playground, a tot-lot playground, splashpad/water play feature, a dog park/dog run, a skate park, a volleyball court, a youth rectangular soccer field, a multi-purpose field, and a pickleball court.

### 4.13.17 RIDGE CREST PARK OPPORTUNITY ANALYSIS

Ridge Crest Park is a neighborhood park located on the east side of the city next to Ridge Crest Elementary School. Existing amenities include a playground, restrooms, picnic areas with barbecues, and an open grassy area with a baseball/softball backstop.

Two opportunity areas were identified. One is adjacent to Ridge Crest Elementary School and the other is along John F. Kennedy Drive. Recommended amenities include a multi-purpose field, a basketball court, group picnic areas, a volleyball court, a tennis court, a pickleball court, a community garden, and an outdoor exercise area.

### 4.13.18 ROCK RIDGE PARK OPPORTUNITY ANALYSIS

Rock Ridge Park is located in a residential neighborhood on the northeastern side of Moreno Valley. Park amenities include a playground area, two shaded picnic areas, one non-shaded picnic area, and a walking trail that connects the south and north portions of the park. This park also provides an entrance to the Cold Creek Trail, which leads to the neighborhood hilltop.

The opportunity areas identified are located in four quadrants of the park in existing grassy open-areas. This park is fairly new and existing amenities are in great condition. As a result, only a few amenity recommendations were identified. Recommended amenities include a splashpad/water play feature and an outdoor exercise area.

FIGURE 4-19: Rock Ridge Park Opportunity Areas

### 4.13.19 SHADOW MOUNTAIN PARK OPPORTUNITY ANALYSIS

Shadow Mountain Park is a community park located on the northern boundary of the city. Park amenities include two youth softball fields with lights, a baseball/softball field that is converted for soccer use during the off-season, a large playground with a zip line area, and a tot-lot. Other amenities include a shaded picnic area with barbecues, a restroom, and a long walking loop along the perimeter of the park.

Since the park already has a great variety of amenities, just one opportunity area was identified. Future amenities to consider in this area include an outdoor exercise area, a group picnic area, and a splashpad/ water play feature.

FIGURE 4-20: Shadow Mountain Park Opportunity Areas

| Adventure Playground | varies | x |

### 4.13.20 SUNNYMEAD PARK OPPORTUNITY ANALYSIS

Sunnymead Park is a community park located near the center of the city. The park is bisected by a flood control channel, but connected by a pedestrian bridge. Even though the park is mostly used for its four lighted baseball fields, the park has other amenities, including a playground, picnic areas with barbecues, concession stands, and restrooms.

Two opportunity areas were identified at the northwest side of the park. Amenities to be considered include a community garden, an outdoor exercise area, group picnic areas, and a basketball court. Community gardens are recommended here due to community need and proximity to multi-family housing where residents may not have access to private outdoor space for a garden. Moreno Valley currently lacks basketball courts, which is why one is recommended here.

### 4.13.21 TOWNGATE MEMORIAL PARK AND TOWNGATE II PARK OPPORTUNITY ANALYSIS

TownGate Memorial Park and TownGate II Park are combined to form a community park on the northwest side of the city. Park amenities include a community center, two playground areas, softball/baseball fields, soccer fields converted for softball/baseball use during the off-season, picnic areas with barbecues, and a walking loop. The park also has a walking and biking path that connects to the Juan Bautista de Anza Trail.

Five opportunity areas were identified in the northeast, southeast, and southwest areas of the park. Desired amenities include a dog park (being considered by the City), a splashpad/ water play feature, a basketball court, a volleyball court, a tennis court, additional group picnic areas, and a pickleball court.

### 4.13.22 VICTORIANO PARK OPPORTUNITY ANALYSIS

Victoriano Park is a passive neighborhood park in the southeast side of Moreno Valley next to Victoriano Elementary School. The only amenities at this park are a multi-purpose field and restrooms.

Two opportunity areas were identified near the center of the park. Based on feedback from community members, the most desired amenities include a basketball court, a playground, a tot-lot playground, group picnic areas, and an outdoor exercise area.

### 4.13.23 VISTA LOMAS PARK OPPORTUNITY ANALYSIS

Vista Lomas Park is neighborhood park on the east side of the city. The park has two basketball half-courts, a playground area for ages 2-5 and 5-12 years old, and an open grassy area with backstops.

Two opportunity areas were identified along Iris Avenue. Recommended amenities include a walking loop, an outdoor exercise area, group picnic areas, a pickleball court, and a youth rectangular soccer field.

### 4.13.24 WESTBLUFF PARK OPPORTUNITY ANALYSIS

Westbluff Park is a small neighborhood park located in the north part of the city between Vista Heights Middle School and Canyon Springs High School. The park contains a playground, picnic areas with barbecues, and a walking path.

Two opportunity areas were identified are on the east and west sides of the park. The amenities desired by the community members through the planning process are a skate park (being considered by the City), a pickleball court, a volleyball court, a basketball court, and an outdoor exercise area.

### 4.13.25 WESTON PARK OPPORTUNITY ANALYSIS

Weston Park is a neighborhood park located on the northeast side of the city and is near Bear Valley Elementary School, Butterfield Language Academy, Valley View High School, and Moreno Elementary School. The park offers a large variety of amenities, including a full basketball court, a playground area, a picnic area, a walking path, and restrooms.

Two opportunity areas were identified as having the potential to further enhance the park. The top recommended amenities include an upgrade to the existing playground, a tot-lot playground, a dog park, a skate park, a community garden, a youth rectangular soccer field, a multi-purpose field, and a group picnic area.

### 4.13.26 WOODLAND PARK OPPORTUNITY ANALYSIS

Woodland Park is a community park found in the center of Moreno Valley. Park amenities include two separate playground areas for people of ages 2-5 and 5-12 years old, a lighted softball field, four tennis courts with pickleball courts overlaid on the tennis courts, four basketball half-courts, a walking path, an area with chess tables, and restrooms.

Seven opportunity areas were identified around the perimeter of the park. While the park already offers a variety of amenities, it still has potential to add more to meet community needs. The most desired amenities include group picnic areas, a full-sized basketball court, an outdoor exercise area, a community garden, volleyball courts, and pickleball courts.

| Walking Loop | varies |  |  |  | x |  |  |  |

### 4.14 POTENTIAL FUTURE LEVEL OF SERVICE WITH RECOMMENDED PROJECTS

It is important to evaluate how the potential new park sites can affect the level of service analysis described in Chapter 2. The following section analyzes the improvements to both the population-based level of service and the geographic level of service for the projected 2045 population. Although these improvements do not completely fulfill the park level of service goals previously outlined, they do have the potential to make a significant impact to the City's parks and recreation system.

### 4.14.1 FUTURE POPULATION LOS WITH RECOMMENDED NEW PARKS

The proposed seven park sites would bring an additional 94 acres which would help decrease the projected park acre deficit in 2045 from 389 acres to 296 acres. This would also bring the City to a 1.89 park acres for every 1,000 residents status, as shown in Table 4-3.

TABLE 4-28: Future Population LOS with Recommended Park Projects

| 2045 LOS | ALL CITY PARKS |
| :--- | :---: |
| Existing Park Acreage | 411.16 |
| Potential Future Park Acreage | 94.15 |
| Recommended Adopted Standard <br> per 1,000 Population | 3.00 |
| Acres per 1,000 Population (2045) | 1.89 |
| Total Surplus/Deficit Acres per 1,000 <br> Population (2045) | -1.11 |
| Acres in Deficit | 296.00 |

## Future Geographic LOS

Figure 4-28 displays the seven potential new parks, the existing park system, and the half-mile travelsheds for both the existing and potential future parks. This map shows that the seven potential new parks will help fill several geographic travelshed gaps in the western, northern, eastern, and central areas of Moreno Valley. The potential new park travelsheds are displayed as an orange shade and the existing travelsheds are displayed as light green shade on the map. Although the seven new parks do make a positive impact, there are several more geographic gaps that the City will need to continue to focus on. The City is encouraged to pursue purchasing additional land for new parks in these gap areas.

Future Parks \& Recreation Facilities
Future Half-Mile Parks Travelshed
Parks
Half-Mile Parks Travelshed
Schools
City Boundary
Sphere of Influence

### 4.15 FUTURE PARK PRIORITY AREAS

The following section describes Park Priority Areas throughout the city. These areas are located within the remaining geographic level of service gaps that require the City to do more detailed analyses. The maps represented in Figure 4-29 through Figure 4-32 highlight the general location of undeveloped sites that the City would need to evaluate further.

Community members at the third public workshop were asked what types of park facilities they would like to see added in these priority areas and if there were any specific properties they would like the City to develop into a park.

Community feedback included the desire for additional facilities such as a new library, performing arts center, amphitheaters, a museum as well as park spaces such as a wilderness park, a nature center, passive park spaces, and trails with outdoor fitness areas. The City is encouraged to continue to search for new park and facility opportunities in these priority areas. The City may consider purchasing vacant land from private owners or creating partnerships / joint-use agreements to bring new park access to the residents.

FIGURE 4-31: Park Priority Area: Central

FIGURE 4-32: Park Priority Area: Southwest

### 4.16 IMPLEMENTATION GOALS

The following section outlines short, mid, and long-term goals the City can explore to improve the parks and recreation system. They are based on the feedback collected from the community as well as the initiatives discussed earlier in this chapter.

## Short-Term Goals

Short-term project goals are those that can typically be implemented within a one to two-year time frame.

Improve park safety and security by adding items such as lighting, new fencing, or security cameras. Identify all sports fields maintenance needs and implement low to mid-cost renovations such as fencing, seating areas, or small areas of surface replacements (sod or decomposed granite).
" Identify and add low-cost passive park amenities such as picnic tables, bench seating, community gardens, or small walking paths.
" equestrian users as well as where to add animal crossing signage.
» Identify four locations for new dog parks (no less than 1-acre in size)
") Offer additional recreation programs and classes that surpass $100 \%$ registrations such as: Dance Exploration, Summer Youth and Teen Basketball, Valley Day Camp (11-14), CYSC All Stars Cheer, Valley Day Camp (7-8), Ballet/Acro, Winter Youth and Teen Basketball, and Art Expression.

## Mid-Term Goals

Mid-term project goals are those that can typically be implemented within a two to five-year time frame.
") Develop individual park master plans to help identify low to mid-cost park amenities (i.e. picnic areas, playgrounds and playground surfacing, or shade over existing playgrounds).
" Identify and add shade (trees or structure) to key amenities such as playgrounds, picnic areas, and grouped exercise stations.
" Identify all sports fields maintenance needs and implement mid to high-cost renovations such as lighting, large seating areas (bleachers) or large areas of sod/artificial turf enhancements.
" Design and install basketball, volleyball, tennis, and pickleball courts to help address the City's deficits identified in Chapter 2.
» Develop an aquatics center master plan to identify the location and amenities a large aquatics center can offer.
" Design and construct up to four new dog parks.
") Design and install multi-use trails that help close gaps between existing trailheads or provide direct access between destinations such as schools, parks, and commercial centers.
»> Perform a detailed facility and asset conditions assessment to determine deferred maintenance.
" Conduct a feasibility study to identify private sites that can be purchased and converted to park land.

Passive Amenities

Field Maintenance

Park Master Plans

Shaded Amenities

## Court Sports

Multi-use Paths

## Long-Term Goals

Long -term project goals are those that can typically be implemented within a five to ten-year time frame.
") Purchase private land to construct new park sites identified earlier in this Chapter.
" Construct a new multi-purpose recreation/teen center that offers spaces such as a large gymnasium for indoor basketball/volleyball/ pickleball, community rooms, rentable banquet spaces, exercise equipment rooms, quiet rooms for school work, and passive outdoor spaces such as picnic areas and gardens.
") Constructa new senior center that offers spaces such as game rooms, lounges, cafeteria, recreation rooms, and other multi-purpose rooms.
» Construct an aquatics center to help meet community demands of pool programs.
" Construct a large sports complex that includes baseball, softball, and multi-purpose rectangular fields to help address the City's deficits identified in Chapter 2.
") Construct a wilderness park that focuses on passive park amenities and experiences such as trails, picnic areas, nature playgrounds, gardens, habitat restoration areas, small amphitheaters, interpretive signage, and a small multi-purpose building that contains community rooms for people to gather.
") Continue making improvements to the Equestrian Center such as trails, restrooms, or a nature center building that houses community meeting spaces.
" Coordinate with the Library Services Department to identify a location for a new larger library that offers a variety of indoor spaces that can supplement recreation programming needs.

Aquatic Center

New Larger Senior Center

New Recreation/ Youth Center

Nature Center

New Larger Library

### 4.17 FUNDING RECOMMENDATIONS

The following section describes potential federal, state, regional, and local funding sources that can be pursued to advance the recommendations in the Plan. The funding sources vary in purpose and scope, but are intended to help an agency implement parks, recreation, and trails projects and programming. Table 4-29 includes information on the funding sources, a general description of the program, funding cycle, and project examples.

TABLE 4-29: Potential Funding Sources

|  |  |  |  |  |  | OJEC | CT TY |  |  |

## 4．17．1 FUNDING TOOLS FOR LOCAL GOVERNMENTS

In addition to the funding programs provided in the previous tables，there are also a number of traditional funding and financing tools available to local governments that may be used to advance parks and recre－ ation projects．

These funding and financing tools include，but are not limited to：

》）Community Facilities District
》）Easement Agreements／Rules
》）Equipment Rental Fees
》）Facilities Benefit Assessment District

》）Facility Use Permit Fees
》）Recreation Service Fees
＞）Food and Beverage Tax
»）General Fund
》）General Obligation Bonds
》 Infrastructure Financing Dis－ trict
＞）In－Lieu Fees
＞Intergovernmental Agree－ ments
》）Lease Revenues
》 Mello Roos District
＞）Park Impact Fees
》）Pouring Rights Agreements
＞）Private Development Agree－ ments
》）Residential Park Improvement Fees

》）Revenue Bond Revenues
»）Sales Tax Revenues
》）Surplus Real Estate Sale Rev－ enues
＞）Traffic Impact Fees
》）Transient Occupancy Tax Revenues
》）Utility Taxes
》）Wastewater Fund Reserves
》 Business Improvement Dis－ trict
＞＞Maintenance Assessment District
＞＞Property Based Improvement District
》 Landscape Maintenance Dis－ trict
＂Targeted Fundraising Activi－ ties
＞）Special Habitat Conservation Programs
＞Special Parks and Recreation Bond Revenues
